www.escondido.org

FINAL INITIAL STUDY/MITIGATED NEGATIVE DECLARATION

Membrane Filtration Reverse Osmosis Facility Project

City File No. ENV19-0002

An Initial Study (IS) Environmental Checklist was prepared for this project and was included with the Draft Negative Declaration (MND). The information contained in the IS/MND will be used by the City of Escondido to assess this project as required by the California Environmental Quality Act (CEQA) and State CEQA Guidelines, as well as relevant City Ordinance and Regulations.

This IS/MND assesses the environmental effects of the proposed Membrane Filtration Reverse Osmosis Facility (MFRO) Project located within the City of Escondido, on the southern side of West Washington Avenue, between Rock Springs Road and Metcalf Avenue, addressed as 901 West Washington Avenue. The City proposes to construct and operate the MFRO Facility to provide advanced treatment for Title 22 quality reuse water produced at the Hale Avenue Resource Recovery Facility (HARRF). This facility is a component of the City's Potable Water Reuse Program (Reuse Program) designed to provide a new, high-quality water supply to local agricultural growers. The project would also assist in off-loading the City's ocean outfall by reducing the amount of water discharged to the ocean from the HARRF. The facility would utilize membrane filtration (e.g., ultrafiltration [UF] membranes) and reverse osmosis (RO) technologies sized for a total production capacity of 2.0 million gallons per day (mgd). The proposed project would consist of an approximately 25,000 SF commercial/industrial-like building (MFRO Facility), that would include partitioned areas to house the MFRO equipment, pumps, electrical room, and control room. The chemicals will be in a covered area adjacent to the MFRO building with two enclosed walls, and chain link fence on the other two sides. The project would also include the product water pipeline, which is a 1-mile long pipeline that would transport the product water to an existing recycled water pipeline.

As mandated by CEQA Guidelines Section 15105, affected public agencies and the interested public were invited to submit comments on the Draft IS/MND during the 30-day public review period starting on **March 7, 2020**, and ending on **April 6, 2020.** The Final IS/MND includes and responds to comments received on the Draft IS/MND. All comments received will be considered with the Final IS/MND in determining whether to approve the project. A printed copy of this document and any associated plans and/or documents are available for review during normal operation hours for the duration of the public review period at the City of Escondido Planning Division at the address shown above, and also available on the City's Website at: https://www.escondido.org/membrane-filtration-reverse-osmosis-facility-project.aspx. The City of Escondido General Plan Update (2012); Final Environmental Impact Report (2012); and Climate Action Plan are incorporated by reference pursuant to Section 15150 of the State CEQA Guidelines. These documents are available for review at, or can be obtained through, the City of Escondido Planning Division or on the City of Escondido website.

CITY OF ESCONDIDO
PLANNING DIVISION
201 NORTH BROADWAY
ESCONDIDO, CA 92025-2798
(760) 839-4671

NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION

CASE NOs.: ENV 19-0002 and ADM 19-0032 "Membrane Filtration Reverse Osmosis Facility Project"

DATE ISSUED: March 3, 2020

PUBLIC REVIEW PERIOD: March 7, 2020 – April 6, 2020

LOCATION: On the south side of W. Washington Avenue, between Rock Springs Road and Metcalf Avenue, addressed as 901 West Washington Avenue, Assessor's Parcel No. (APN) 232 090-72-00.

PROJECT DESCRIPTION: The Escondido MFRO Facility (Facilty) would provide advanced treatment for Title 22 quality reuse water produced at the City of Escondido Hale Avenue Resource Recovery Facility (HARRF). The Facility would utilize membrane filtration (MF) (i.e., microfiltration or ultrafiltration membranes) and reverse osmosis (RO) technologies sized for a total production capacity of 2.0 million gallons per day (mgd). High quality treated water would be blended with Title 22 recycled water within an on-site blend tank. The water would then be sent through existing non-potable reuse water/agriculture pipelines and distributed to growers. The proposed project would consist of an approximately 25,000 SF commercial/industrial-like building, two storage tanks (1,000,000 gallon and 240,000 gallon), associated pumps and other on-site infrastructure, and a back-up desiel generator. The facility would be designed to accommodate installation of additional equipment in the future that would provide an additional 1.0 mgd of production capacity. The project would also include the installation of a 24-inch product water pipeline, which is a one (1)-mile long pipeline along Washington Avenue that would transport the product water easterly to an existing recycled water pipeline near Waverly Place and the Escondido Creek Flood Control Channel.

APPLICANT: City of Escondido (Angela Morrow, Deputy Director of Utilities) 760-839-6290 ext. 7034

An Initial Study has been prepared to assess this project as required by the California Environmental Quality Act and Guidelines, Ordinances and Regulations of the City of Escondido. The Initial Study and Draft Mitigated Negative Declaration (IS/MND) are on file in the City of Escondido Planning Division and can be viewed on the City of Escondido web site (*Active Development Projects*) at: https://www.escondido.org/membrane-filtration-reverse-osmosis-facility-project.aspx. Further information may be obtained by contacting the Adam Finestone, Principal Planner, at (760) 839-6203 or via email at afinestone@escondido.org.

Findings: The findings of this review are that the Initial Study identified effects related to biological resources, cultural and tribal cultural resources, geology, hazards and hazardous materials, and noise that might be potentially significant. Design and minimization measures, revisions in the project plans, and/or mitigation measures agreed to by the applicant would provide mitigation to a point where potential impacts are reduced to less than a significant level. A public meeting for the adoption of the Final IS/MND by the Escondido Zoning Administrator has not yet been scheduled.

Bill Martin, AICP
Director of Community Development

1.0 COMMENTS RECEIVED ON THE DRAFT IS/MND AND RESPONSES

1.1 Comment Letters Received

The following commenters submitted written letters to the City during the 30-day public review period on the Draft IS/MND (March 7, 2020 – April 6, 2020). The name of the commenter and date of the letter is provided below.

A. Cheryl Madrigal, Tribal Historic Preservation Officer and Cultural Resources Manager, Rincon Band of Luiseño Indians (March 13, 2020)

B. Cedric Irving, Environmental Scientist, State Water Resources Control Board (March 2020, received via email on April 2, 2020)

C. Colleen Hines, Supervising Environmental Health Specialist, County of San Diego Site Assessment and Mitigation Program, Land and Water Quality Division, Department of Environmental Health (DEH) (April 2, 2020)

D. Maurice Eaton, Branch Chief, California Department of Transportation (Caltrans) (April 6, 2020)

E. Michelle Price, Program Coordinator, County of San Diego Vector Control Program, Department of Environmental Health (DEH) (April 2, 2020)

The comment letters received on the Draft IS/MND have been numbered and the City has provided a written response to each numbered comment. The comment letters and responses are provided on the following pages in side-by-side format. The numbered comments are provided on the left side of the page and the City's response is provided on the right side of the page opposite each comment.

1.2 Revisions to the Draft IS/MND

Comments received during public review period of the Draft IS/MND resulted in additions to Section 3.5, Project Construction, to add clarifications regarding a vector control program, and item XXI.b, Mandatory Findings of Significance, within the cumulative analysis discussion to disclose a project planned by Caltrans. These changes are indicated by strikeout (deleted text) and underlined (inserted text) markings in the Environmental IS Checklist.

Re: Membrane Filtration Reverse Osmosis Facility; Case No. ENV 19-0002; ADM 19-0032

Dear Mr. Finestone,

This letter is written on behalf of the Rincon Band of Luiseño Indians. Thank you for providing us with the Notice of Intent to Adopt a Mitigated Negative Declaration (MND) for the above referenced project. The identified location is within the Territory of the Luiseño people, and is also within Rincon's specific area of Historic interest.

A1 We have reviewed the provided documents and we are in agreement with the measures which include archaeological and tribal monitoring, a monitoring report, and protocols for discovery of cultural material and human remains.

We do request that the Rincon Band be notified of any changes in project plans. In addition, we ask that a copy of the final monitoring report, when available and ask that Rincon be afforded the opportunity to monitor the ground disturbances associated with this project.

If you have additional questions or concerns, please do not hesitate to contact our office at your convenience at (760) 297-2635.

Thank you for the opportunity to protect and preserve our cultural assets.

Sincerely,

Cheryl Madrigal
Tribal Historic Preservation Officer
Cultural Resources Manager

Bo Mazzetti, Chairman | Tishmall Turner, Vice Chair | Laurie E. Gonzalez, Council Member | Alfonso Kolb, Sr., Council Member | John Constantino, Council Member

A1 The letter expresses appreciation for the opportunity to comment on the IS/MND and agreement with mitigation measures CUL-1 through CUL-10. The City will notify the Rincon Band of any changes in the project plans and provide a copy of the final monitoring report when available. As described in mitigation measure CUL-2 in the IS/MND, both Luiseño and Kumeyaay Native American monitors people shall be retained for the project.

CALIFORNIA Water Boards

GAVIN NEWSOM GOVERNOR

JARED BLUMENFELD SECRETARY FOR ENVIRONMENTAL PROTECTION

State Water Resources Control Board

Adam Finestone
City of Escondido Planning Division
201 N. Broadway
Escondido, CA 92025

Dear Mr. Finestone:

INITIAL STUDY/MITIGATED NEGATIVE DECLARATION (MND) FOR CITY OF ESCONDIDO'S (CITY); ENV19-0002 MEMBRANE FILTRATION REVERSE OSMOSIS FACILITY – MFRO (PROJECT); SAN DIEGO COUNTY; STATE CLEARINGHOUSE NO. 2020039020

We understand that the City is pursuing Clean Water State Revolving Fund (CWSRF) financing for this Project (CWSRF No. C-06-8059-110). As a funding agency and a state agency with jurisdiction by law to preserve, enhance, and restore the quality of California's water resources, the State Water Resources Control Board (State Water Board) is providing the following information on the MND to be prepared for the Project.

B1

The State Water Board, Division of Financial Assistance, is responsible for administering the CWSRF Program (Program). The primary purpose for the Program is to implement the Clean Water Act and various state laws by providing financial assistance for wastewater treatment facilities necessary to prevent water pollution, recycle water, and thereby protect and promote health, safety and welfare of the inhabitants of the state.

The Program is partially funded by the United States Environmental Protection Agency (USEPA) and requires additional "California Environmental Quality Act (CEQA)-Plus" environmental documentation and review. Two enclosures are included that illustrate the Program environmental review process including the additional CEQA-Plus federal requirements. For the complete environmental application package and instructions please visit: http://www.waterboards.ca.gov/water_issues/programs/grants_loans/srf/srf_forms.shtml . The State Water Board is required to consult directly with agencies responsible for implementing federal environmental laws and regulations. Any environmental issues raised by federal agencies or their representatives will need to be resolved prior to the State Water Board's approval of a CWSRF financing commitment for your proposed Project. For further information on the Program, please contact Mr. Brian Cary, at (916) 449-5624.

E. JOAQUIN ESQUIVEL, CHAIR | EILEEN SOBECK, EXECUTIVE DIRECTOR
1001 I Street, Sacramento, CA 95814 | Mailing Address: P.O. Box 100, Sacramento, CA 95812-0100 | www.waterboards.ca.gov
RECYCLED PAPER

B1 The introductory pages of the letter describe the requirements that the City would need to comply with as part of the application for State Water Resources Control Board (SWRCB) Clean Water State Revolving Fund (CWSRF) financing. Because the CWSRF Program is partially funded by the U.S. Environmental Protection Agency (USEPA), it requires additional environmental documentation that demonstrates compliance with federal regulations, including the Federal Endangered Species Act, Section 7 clearance from U.S. Fish and Wildlife Service, Section 106 of the National Historic Preservation Act (Section 106), and the federal Clean Air Act.

The City appreciates the information provided by the SWRCB regarding the CWSRF Program. The air quality technical report, biological resources technical letter, and cultural resource inventory and assessment for the project (attached to the IS/MND as Appendices A, B, and C, respectively) include a discussion of the federal requirements mentioned in the letter. The City will work with the SWRCB on these and any additional requirements needed as part of the CWSRF Program.

It is important to note that prior to a CWSRF financing commitment, projects subject to provisions of the Federal Endangered Species Act (ESA), must obtain ESA, Section 7 clearance from the United States Department of the Interior, Fish and Wildlife Service (USFWS), and/or the United States Department of Commerce National Oceanic and Atmospheric Administration, National Marine Fisheries Service (NMFS) specific to any potential effects to special-status species.

Please be advised that the State Water Board will coordinate with the USEPA to consult with the USFWS, and/or the NMFS regarding all federal special-status species that the Project has the potential to affect if the Project is to be financed by the Program. The City will need to identify whether the Project will involve any direct effects from construction activities, or indirect effects such as growth inducement, that may affect federally listed threatened, endangered, or candidate species that are known, or have a potential to occur in the Project site, in the surrounding areas, or in the service area, and to identify applicable conservation measures to reduce such effects.

In addition, CWSRF projects must comply with federal laws pertaining to cultural resources, specifically Section 106 of the National Historic Preservation Act (Section 106). The State Water Board is responsible for ensuring compliance with Section 106 and is required to consult directly with the California State Historic Preservation Officer (SHPO). The SHPO consultation is initiated once sufficient information is provided by the CWSRF applicant. If the City decides to pursue CWSRF financing, please retain a consultant that meets the Secretary of the Interior's Professional Qualifications Standards (http://www.nps.gov/history/local-law/arch_stnds_9.htm) to prepare a Section 106 compliance report.

B1 cont.

Note that the City will need to identify the Area of Potential Effects (APE), including construction and staging areas, and the depth of any excavation. The APE is three-dimensional and includes all areas that may be affected by the Project. The APE includes the surface area and extends below ground to the depth of any Project excavations. The records search request should extend to a ½-mile beyond project APE. The appropriate area varies for different projects but should be drawn large enough to provide information on what types of sites may exist in the vicinity.

Other federal environmental requirements pertinent to the Project under the Program include the following (for a complete list of all federal requirements and instructions please visit http://www.waterboards.ca.gov/water_issues/programs/grants_loans/srf/srf_forms.shtml :

A. An alternative analysis discussing environmental impacts of the Project in either the CEQA document (i.e. Environmental Impact Report) or in a separate report (i.e. for projects utilizing a Negative Declaration or Mitigated Negative Declaration).

B. A public hearing or meeting for adoption/certification of all CEQA documents except for those with little or no environmental impacts.

C. Compliance with the Federal Clean Air Act: (a) Provide air quality studies that may have been done for the Project; and (b) if the Project is in a nonattainment area or attainment area subject to a maintenance plan; (i) provide a summary of the estimated emissions (in tons per year) that are expected from both the construction and operation of the Project for each federal criteria pollutant in a nonattainment or maintenance area, and indicate if the nonattainment designation is moderate, serious, or severe (if applicable); (ii) if emissions are above the federal de minimis levels, but the Project is sized to meet only the needs of current population projections that are used in the approved State Implementation Plan for air quality, quantitatively indicate how the proposed capacity increase was calculated using population projections.

D. Compliance with the Coastal Zone Management Act: Identify whether or not the Project is within a coastal zone and the status of any coordination with the California Coastal Commission.

B1 cont.

E. Protection of Wetlands: Identify any portion of the proposed Project area that should be evaluated for wetlands or United States waters delineation by the United States Army Corps of Engineers (USACE), or requires a permit from the USACE, and identify the status of coordination with the USACE.

F. Compliance with the Farmland Protection Policy Act: Identify whether or not the Project will result in the conversion of farmland. Identify the status of farmland (prime, unique, local or statewide Importance) in the Project area and determine if this area is under a Williamson Act Contract.

G. Compliance with the Migratory Bird Treaty Act: List any birds protected under this act that may be impacted by the Project and identify conservation measures to minimize impacts.

H. Compliance with the Flood Plain Management Act: Identify whether or not the Project is in a Flood Management Zone and include a copy of the Federal Emergency Management Agency flood zone maps for the area.

I. Compliance with the Wild and Scenic Rivers Act: Identify whether or not any Wild and Scenic Rivers would be potentially impacted by the Project and include conservation measures to minimize such impacts.

Following are specific comments on the City's draft MND:

B2 1. In what construction methods will the Project's MFRO product water pipeline cross the Reidy Creek flood control channel?

B3 2. For the Project components connected or adjacent to the Reidy Creek Flood Control Channel, please ensure the technical requirements for building within a

B2 The recycled water pipeline will cross over Reidy Creek channel utilizing the existing traffic bridge for support of the 24-inch pipeline. Structural calculations have verified viability of the design. The construction of this crossing (over the channel) will not require access to or have any effects on the channel.

	B2 (cont.) As described on page 26 of the IS/MND within item IV.b, Biological Resources, and item X, Hydrology, the City is required to create a Stormwater Pollution Prevention Plan (SWPPP), which would include construction Best Management Practices (BMPs). As a standard construction practice and regulatory requirement, the City would implement the BMPs from the SWPPP during construction, which may include installing and maintaining sediment and erosion control measures; employing appropriate standard spill prevention practices and clean-up materials; maintaining the project area free of trash and debris; maintaining effective control of fugitive dust; and properly storing, handling, and disposing of all toxins and pollutants including waste materials. Implementation of the BMPs would ensure that impacts to off-site sensitive natural communities are less than significant. B3 For the components connected to or adjacent to the Reidy Creek Flood Control channel, the City will contact the San Diego County Department of Public Works, Flood Control Division, to ensure that the technical requirements for building within a special flood hazard zone are included as part of project design and construction.

B3 cont. special flood hazard zone by contacting the San Diego County Department of Public Works, Flood Control Division.

B4 Please upload to FAAST the following documents applicable to the proposed Project following the City's CEQA process: (1) one copy of the draft and final MND, (2) the resolution adopting the IS/MND and making CEQA findings, (3) all comments received during the review period and the District's response to those comments, (4) the adopted Mitigation Monitoring and Reporting Program and (5) the Notice of Determination filed with the San Diego County Clerk and the Governor's Office of Planning and Research, State Clearinghouse. In addition, we would appreciate notices of any hearings or meetings held regarding environmental review of any projects to be funded by the State Water Board.

Thank you for the opportunity to review the City's draft MND. If you have any questions or concerns, please feel free to contact me at (916) 341-6983, or by email at Cedric.Irving@waterboards.ca.gov or contact Brian Cary at (916) 449-5624, or by email at Brian.Cary@waterboards.ca.gov.

Sincerely,

Cedric S. Irving

Subject: [EXT] ENV 19-0002
Date: Thursday, April 02, 2020 1:45:52 PM

Good Afternoon Mr. Finestone,

The County of San Diego, Department of Environmental Health, Land & Water Quality Division has the following comment on the Notice of Intent to Adopt a Mitigated Negative Declaration for the Membrane Filtration Reverse Osmosis Facility, City File No. ENV 19-0002, ADM 19-0032:

C1 Since treated water is being mixed with recycled water and then sent through existing non-potable reuse water/agriculture pipelines and distributed to growers, the project may be subject to plan review by the Department of Environmental Health Recycled Water Program. Contact Jamelle McCullough, Supervising Environmental Health Specialist, at 858-505-6843 or Jamelle.McCullough@sdcounty.ca.gov for additional information.

Regards,

Colleen Hines
Supervising Environmental Health Specialist
Site Assessment and Mitigation Program
Land and Water Quality Division
Department of Environmental Health
Phone: (858) 505-6874

Help us make sure our customers have a positive experience. Please take 60 seconds to provide us with your feedback.

C1 The City will coordinate with Jamelle McCullough, Supervising Environmental Health Specialist, to determine if the project is subject to plan review by the Department of Environmental Health Recycled Water Program.

Letter D

April 6, 2020

11-SD-78
PM 18.07
Membrane Filtration Reverse Osmosis Facility
IS/MND/SCH # 2020039020

Mr. Adam Finestone
Project Manager
City of Escondido Community Development Department
201 North Broadway
Escondido, CA 92025

Dear Mr. Finestone:

D1 Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Initial Study (IS) /Mitigated Negative Declaration (MND) (SCH# 2020039020) on the Membrane Filtration Reverse Osmosis (MFRO) Facility on East Washington Avenue also known as State Route 78 (SR-78) at North Broadway in the city of Escondido. The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability. The Local Development-Intergovernmental Review (LD-IGR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities.

Caltrans has the following comments:

D2 Caltrans is working on a project that overlaps the MFRO project. The project information is as follows:

> "This is a capital preventative maintenance project for pavement rehabilitation on SR-78 in Escondido from Post Mile (PM) N17.60 (freeway termini of SR-78 at Lincoln Parkway and Broadway/ SR-78) to PM R21.30 (intersection of Flora Vista Street and San Pasqual Valley Road/ SR-78). The purpose of this project is to improve the ride quality and extend the service life of this section of existing pavement. The anticipated construction start date is December 2020 with a 200 working day schedule".

D1 The comment is an introduction to the remainder of the letter.

D2 The comment describes a Caltrans project that may overlap the MFRO project. The Caltrans project is for pavement rehabilitation on SR-78 that would begin at the intersection of Lincoln Parkway and Broadway/SR-78 and terminate at the intersection of Flora Vista Street and San Pasqual Valley Road/SR-78. The anticipated construction start date is December 2020 with a 200 day working schedule. This project would potentially overlap with approximately 385 feet of the MFRO product water pipeline alignment within Washington Avenue.

The overlap happens on East Washington Avenue between North Broadway and Waverly Place. The project activities in the affected area include the following:

D3

- 0.6' Pavement Rehabilitation [0.45' HOT MIX ASPHALT (TYPE A) (LARGE STONE MATRIX), 0.15' RUBBERIZED HOT MIX ASPHALT (GAP GRADED)]
- ADA curb ramp improvements
- 2" Fiber Optic Cable System (18" deep, including vaults and cabinets)
- Modifying Signal and Lighting Systems (including loop detectors)
- Upgrades to Signing and Striping facilities

Please see the proposed MFRO schedule below, which shows that pipeline construction will start in September 2020 and finish in February 2021. Therefore, this MFRO pipeline portion of the project needs to coordinate with this project so that brand new pavement is not ripped out shortly after it is placed.

Caltrans recommends that the MFRO project prioritize work within the overlap portion due to the two project concurrent schedules.

D4

Table 9
ANTICIPATED CONSTRUCTION SCHEDULE

Construction Activity	Construction Period		
	Start	End	Number of Working Days
Demolition	7/1/2020	7/28/2020	20
Site Preparation/Grading	7/29/2020	9/8/2020	30
Pipeline Excavation and Construction	9/9/2020	2/9/2021	110
Architectural Coating	2/10/2021	3/5/2021	18
Building Construction	3/6/2021	4/29/2022	300
Paving	4/30/2022	5/25/2022	18
Architectural Coating	5/26/2022	6/28/2022	24

Source: CalEEMod
Note: Output data is provided in Appendix A.

D5 The project will need an Encroachment Policy Exception (EPE) since the line is a pressurized underground facility that is not proposing to encase the pipeline

D3 The comment describes the components that may occur in the street segment, including pavement rehabilitation, curb ramp improvements, installation of a subsurface fiber optic system, signal and lighting system modifications, and upgrades to signs and striping. The potential conflict would likely occur with the overlap of the fiber optic system and the pavement rehabilitation.

D4 The comment describes the phasing for the proposed project, which includes an anticipated start date of September 9, 2020 and end date of February 9, 2021 for installation of the product pipeline within Washington Avenue. It is not known specifically when the section of pipeline that is overlapped with the roadway improvements Caltrans is scheduling will be conducted, but the City will work with Caltrans to prioritize that portion so that the pipeline is installed prior to the Caltrans improvements.

D5 The City will provide the requested information on the Encroachment Policy Exception form to Caltrans.

D5 cont. within State R/W. Please provide the information needed (see attached) on the EPE to Caltrans.

Hydrology

D6 1. Provide a set of plans for work proposed within Caltrans R/W.

D7 2. Since no plan set was submitted the following previous comments still apply:
   a. Pipeline will be placed under a stress reducing slab for sections of pipeline with less than 42" of cover.

D8 b. The trench back-fill zone should be as far away as physically possible from any Caltrans drainage facility backfill zones.

D9 c. Provide copy of As-Builts for all existing Caltrans drainage facilities within the project limits.

D10 d. Coordination with various Caltrans Branches is needed to determine acceptable locations for cathodic protection stations, air-valves, and blow-offs.

D11 e. Caltrans R/W, centerline and stationing should be shown on all applicable plans that will show SR-78.
   f. Offsets to drainage, curb, R/W, centerline, etc. should be shown on plans
   g. All existing drainage facilities should be shown on plans.
   h. Include a typical section showing drainage, proposed pipeline, roadway structure thickness, etc.
   i. Include a detail showing the minimum horizontal and vertical distance required from existing drainage back-fill zones.
   j. Include a Load Resistance Factor Design (LRFD) concrete encasement detail. This detail requires Headquarters Underground Structures review and approval.

Environmental

D12 Caltrans welcomes the opportunity to be a Responsible Agency under the California Environmental Quality Act (CEQA), as we have some discretionary authority of a portion of the project that is in Caltrans' R/W through the form of an encroachment permit process. We look forward to the coordination of our efforts to ensure that Caltrans can adopt the alternative and/or mitigation measure for our R/W. We would appreciate meeting with you to discuss the elements of the Environmental Impact Report (EIR) that Caltrans will use for our subsequent environmental compliance.

D6 The City will provide a set of plans for work proposed within the right-of-way (R/W) to Caltrans.

D7 The pipeline would be placed under a stress reducing slab for sections of pipeline with less than 42 inches of cover.

D8 The pipeline trench back-fill zone would be as far away as physically possible from any Caltrans drainage facility backfill zones.

D9 A copy of As-Builts for all existing Caltrans drainage facilities within the project limits will be provided.

D10 Coordination with various Caltrans branches will be completed to determine acceptable locations for cathodic protection stations, air-valves, and blow-offs.

D11 Caltrans R/W, centerline and stationing will be shown on all applicable plans that include SR-78.

Offsets to drainage, curb, R/W, centerline, etc., will be shown on plans.

All existing drainage facilities will be shown on plans.

Typical sections showing drainage, proposed pipeline, roadway structure thickness, etc., will be provided.

A detail showing the minimum horizontal and vertical distance required from existing drainage back-fill zones will be included.

The design will include a Load Resistance Factor Design (LRFD) concrete encasement detail. This detail will require Headquarters Underground Structures review and approval.

D12 The City will be available to meet with Caltrans as requested as part of Caltrans' role as a CEQA responsible agency to discuss information that they may use for the environmental compliance part of the encroachment permit approval process.

D13 An encroachment permit will be required for any work within the Caltrans' R/W prior to construction. As part of the encroachment permit process, the applicant must provide approved final environmental documents for this project, corresponding technical studies, and necessary regulatory and resource agency permits. Specifically, the final environmental documents need to include any CEQA determinations or exemptions. The supporting documents must address all environmental impacts within the Caltrans R/W and address any impacts from avoidance and/or mitigation measures.

D14 We recommend that this project specifically identifies and assesses potential impacts caused by the project or impacts from mitigation efforts that occur within Caltrans R/W that includes impacts to the natural environment, infrastructure (highways/roadways/on- and off-ramps) and appurtenant features (lighting/signs/guardrail/slopes). Caltrans is interested in any additional mitigation measures identified for the IS/MND.

D15 The pipeline alignment may impact a portion of SR-78 near Washington Avenue and the soil may contain Aerially Deposited Lead (ADL). A Lead Compliance Plan may be required. There was no discussion of ADL in the Hazard Waste Report or the IS/MND.

D16 Soil and groundwater at the site appear to have previous impacts of various chemicals of concern, including: petroleum hydrocarbons, fuel oxygenates, Perchloroethylene (PCE), and metals. These contaminants of concerns (COCs) were identified in the provided Environmental Site Assessment (ESA) performed by Ninyo and Moore, dated May 23, 2019. Ninyo and Moore recommended a soil and groundwater management plan be prepared to facilitate the handling and mitigate exposure of adverse environmental conditions during the project activities.

As such, groundwater generated from the project site may not be suitable for reuse for agricultural purposes. Additionally, any soil generated from the site will need to be tested and characterized for potential onsite reuse or offsite disposal.

Right of Way

D17 Plans need to show the R/W and centerlines of SR-78 and intersecting streets. Also please show dimensions from the water line to the centerline

D13 The City will provide Caltrans with all final environmental documents and technical studies pertaining to the project. The project would need to obtain an Encroachment Permit (California Streets and Highways Code Sections 660 et seq.) from Caltrans, as described in Section 2.7 of the Draft IS/MND.

D14 Caltrans recommends that the project specifically identifies impacts caused by the project within the R/W that includes impacts to the natural environment, infrastructure and appurtenant features. The IS/MND identifies several construction best management practices and mitigation measures that would reduce potential impacts within the roadway R/W to a less than significant level. As stated in Section 2.5.4 of the IS/MND, the City would prepare a Traffic Control Plan (TCP) that would be developed with both the Caltrans Manual of Traffic Control Devices for Construction and Maintenance Work Zones and the Standard Specifications for Public Works Construction. The TCP would describe work hours, haul routes, work area delineation, traffic control and flagging. The plan would aim to limit lane closures during peak traffic hours to the extent possible. All roads would remain passable to emergency service vehicles at all times. Road work construction notification would be provided with "Road Work Ahead" warning signs and speed control to achieve required speed reductions for safe traffic flow through the work zone. The TCP would be submitted to Caltrans for approval prior to construction.

Further, the IS/MND includes mitigation measure BIO-1 for the avoidance of nesting birds and raptors, measures CUL-1 through CUL-10 to avoid and/or minimize impacts to cultural resources; measure GEO-1 to avoid impacts to paleontological impacts; and measure NOI-1 to minimize construction noise to noise-sensitive land uses.

D15 As noted in response D-2, the portion of the project within Washington Avenue that may be coincident with SR-78 is the 385-foot section of pipeline between North Broadway and Waverly Place. The Environmental Site Assessment prepared for the project focused on the on-site soils within the parcel where the MFRO building would be constructed, as the site has a history of recognized environmental conditions. The City will work with Caltrans, as described in

D15 (cont.) responses D-4 through D-14 and coordinate with their construction team to determine whether an aerially-deposited lead survey would be required as part of the encroachment permit process for the portion of the roadway that may affect SR-78.

D16 The project does not include groundwater extraction and would not use groundwater generated from the site for agricultural purposes. As described in the Section 2, Project Description, of the IS/MND, the City proposes to provide advanced treatment for recycled water produced at the Hale Avenue Resources Recycling Facility (HARRF) and convey it to agricultural users.

Regarding reuse of excavated soil, the IS/MND includes measure HAZ-1, a soil and groundwater management plan, that will include protocols for the proper handling, transportation, and disposal (as applicable) of contaminated or potentially contaminated soils. Excavated materials would be tested and characterized for potential reuse on the site or within the Caltrans R/W or disposed of at an appropriately permitted site depending on the material.

D17 The project plans will show the R/W and centerlines of SR-78 and intersecting streets. They will also show dimensions from the water line to the centerline and R/W.

D17 cont.

and R/W.

Any work performed within Caltrans R/W will require discretionary review and approval by Caltrans and an encroachment permit will be required for any work within the Caltrans R/W prior to construction.

Additional information regarding encroachment permits may be obtained by contacting the Caltrans Permits Office at (619) 688-6158 or by visiting the website at http://www.dot.ca.gov/trafficops/ep/index.html. Early coordination with Caltrans is strongly advised for all encroachment permits.

D18

If you have any questions, please contact Mark McCumsey at (619) 688-6802 or by email at mark.mccumsey@dot.ca.gov.

Sincerely,

electronically signed by

MAURICE EATON, Branch Chief
Local Development and Intergovernmental Review Branch

D18 Comment reiterates that an encroachment permit will be required and provides additional information for the City's reference. As noted in responses D-4 through D-16, the City will coordinate with Caltrans to provide the information they need for processing the encroachment permit.

COMMENTS ON THE MITIGATED NEGATIVE DECLARATION FOR THE "MEMBRANE FILTRATION REVERSE OSMOSIS FACILITY"

Dear Mr. Finestone:

Thank you for the opportunity to comment on Mitigated Negative Declaration for the above referenced project. The County of San Diego Vector Control Program (VCP) is responsible for the protection of public health through the surveillance and control of mosquitoes that are vectors for human disease including West Nile virus (WNV). The VCP has completed their review and has the following comments regarding the proposed project.

E1

1. The VCP respectfully requests that the project design features address potential impacts from possible mosquito breeding sources created by the project and that the project is constructed in a manner to minimize those impacts. Specifically, ensure construction-related depressions created by grading activities and vehicle tires, ditches, and landscaping do not result in depressions that will hold standing water. In addition, ensure drainage areas and other structures do not create a potential mosquito breeding source. Any area that is capable of accumulating and holding at least ½ inch of water for more than 96 hours can support mosquito breeding and development.

E2

2. Please note, the VCP has the authority pursuant to state law and County Code to order the abatement of any mosquito breeding that does occur either during construction or after the project is completed that is determined to be a vector breeding public nuisance. The VCP will exert that authority as necessary to protect public health if the project is not designed and constructed to prevent such breeding.

E3

3. For your information, the County of San Diego Guidelines for Determining Significance for Vectors can be accessed at http://www.sandiegocounty.gov/content/dam/sdc/pds/docs/vector_guidelines.pdf and the

E1 The project is not anticipated to result in standing pools on the project site. However, in response to this comment, construction best management practices (BMPs) related to vector control have been added to Section 3.5, Project Construction, of the Final IS/MND, as shown below:

Section 3.5.5 Vector Control Program

In accordance with the County's Vector Control Program, the project would:

- *Be constructed in a manner to minimize standing water resulting from construction-related depressions created by grading activities and vehicle tires, tree pits, and landscaping.*
- *Ensure BMPs and drainage areas do not create a potential mosquito breeding source (an area capable of holding at least a half-inch of water for more than 96 hours).*

Note that following the County's vector control guidelines was already a requirement that the project would have to meet. Therefore, this modification would not change any conclusions or significance determinations in the IS/MND.

E2 As noted in response E-1, the City will take steps to avoid any potential vector breeding nuisance.

Mr. Finestone

Vincent Kattoula, CAO Staff Officer, LUEG

E3 The comment provides information on the County's Guidelines for Determining Significance for Vectors and does not address the adequacy or accuracy of information provided in the IS/MND. The information contained in the comment has been noted.

2.0 INTRODUCTION

2.1 INITIAL STUDY INFORMATION SHEET

1.	Project title:	Membrane Filtration Reverse Osmosis Facility Project (City File No. ENV19-0002 and ADM 19-0032)
2.	Lead agency name and address:	City of Escondido (City) 201 N. Broadway Escondido, CA 92025
3.	Contact person and phone number:	Angela Morrow, Deputy Director of Utilities 760-839-6290 x7030
4.	Project location:	901 West Washington Avenue Escondido, CA 92025
5.	Project sponsor's name and address:	City of Escondido 201 N. Broadway Escondido, CA 92025
6.	General Plan designation:	General Industrial (GI)
7.	Zoning:	General Industrial (M-2)

8. Description of project:

The project proposes to construct a Membrane Filtration Reverse Osmosis (MFRO) Facility that would provide advanced treatment for Title 22 quality reuse water produced at the Hale Avenue Resources Recovery Facility (HARRF). The treated water would be used for agricultural purposes and would be distributed to growers through existing non-potable reuse water/agriculture pipelines. Refer to Section 2.0, *Project Description*, of this Initial Study/Mitigated Negative Declaration (IS/MND) for more details.

9. Surrounding land uses and setting:

The proposed project site is located in the western portion of the City of Escondido in northern San Diego County, approximately 30 miles north of downtown San Diego and 13 miles east of the Pacific Ocean (see Figure 1, *Regional Location*). Escondido is situated in a natural valley at approximately 650 feet above mean sea level (amsl) and surrounded by rolling hills and rugged terrain ranging up to 4,200 feet amsl.

The proposed project is located on the southern side of West Washington Avenue, addressed at 901 West Washington Avenue, approximately 55 feet southwest of the West Washington Avenue and Rock Springs Road intersection, as shown on Figure 2, *Project Location (Aerial Photograph)*. The parcel is approximately 10.3 acres in size and is owned by the City. The Assessor's Parcel Number (APN) is

232-090-72-00. The site is accessible via a driveway along West Washington Avenue and a shared access driveway with two gated entrances towards the western side of the property.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement:

Refer to Section 2.7, *Responsible Agencies, Permits and Approvals*, of this IS/MND.

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code Section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

Letters regarding the project were sent on March 8, 2019 to all contacts listed by the NAHC. One response been received. In a letter dated March 22, 2019, the Viejas Band of Kumeyaay Indians (Viejas) indicated that the general project area has cultural significance or ties to Viejas and requested that a Kumeyaay Cultural Monitor be on site for ground disturbing activities to inform them of any new developments such as inadvertent discovery of cultural artifacts, cremation sites, or human remains. In accordance with the requirements of Assembly Bill (AB) 52, the City sent notification to four Native American Tribes traditionally and culturally affiliated with the project area on July 31, 2019. The Rincon Band of Luiseño Indians responded within the 30-day period requesting consultation and the completion of an archaeological record search and assessment with results being provided to the Rincon Band. No response was received from the San Luis Rey Band of Mission Indians, Soboba Band of Luiseño Indians, or Mesa Grande Band of Mission Indians. Formal consultation with the Rincon Band was conducted on October 22, 2019. See Section XVIII of the Environmental Initial Study Checklist for more detail.

2.2 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" or "Less than Significant with Mitigation Incorporated" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☐ Air Quality
■ Biological Resources	■ Cultural Resources	☐ Energy
■ Geology and Soils	☐ Greenhouse Gas Emissions	■ Hazards and Hazardous Materials
☐ Hydrology and Water Quality	☐ Land Use and Planning	☐ Mineral Resources
■ Noise	☐ Population and Housing	☐ Public Services
☐ Recreation	☐ Transportation	■ Tribal Cultural Resources
☐ Utilities and Service Systems	☐ Wildfire	■ Mandatory Findings of Significance

2.3 DETERMINATION

On the basis of this initial evaluation:

☐	I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
■	I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
☐	I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
☐	I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect(1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
☐	I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Adam Finestone, Principal Planner	City of Escondido
Printed Name	For

3.0 PROJECT DESCRIPTION

3.1 INTRODUCTION

The Escondido MFRO Facility would provide advanced treatment for Title 22 quality reuse water produced at the HARRF. The facility would utilize membrane filtration (MF) (i.e., microfiltration or ultrafiltration membranes) and reverse osmosis (RO) technologies sized for a total production capacity of 2.0 million gallons per day (mgd). High quality treated water would be blended with Title 22 recycled water within an on-site blend tank. The water would then be sent through the existing non-potable reuse water/agriculture pipelines and distributed to growers.

3.2 PROJECT LOCATION

The City of Escondido is located in northern San Diego County, approximately 30 miles north of downtown San Diego and 18 miles east of the Pacific Ocean. Escondido is situated in a natural valley at approximately 650 feet amsl and surrounded by rolling hills and rugged terrain ranging up to 4,200 amsl.

The project is located at 901 West Washington Avenue, approximately 55 feet southwest of the West Washington and Rock Springs Road intersection, as shown on Figures 1 and 2. The parcel is approximately 10.3 acres in size and is owned by the City. The APN is 232-090-72-00. The site is accessible via a driveway along West Washington Avenue and a shared access driveway with two gated entrances on the west side. The site also is accessible towards the southeastern corner of the property from a bridge across the concrete flood control channel that connects the site to the City's Public Works Yard.

3.2.1 Existing Site Conditions

The site is currently developed with a one single wide trailer used by the City's recycling group, one quadruple wide trailer previously used for training by various City departments, a metal storage building and an asphalt paved parking lot. The remainder of the site is used by the City Public Works and Utilities Departments for storage and heavy equipment training, except for a location on the west side that is used by EDCO, a waste disposal corporation, for the storage of empty roll-off bins.

3.3 PROJECT BACKGROUND

The City currently produces tertiary-treated recycled water (recycled water), which is used for landscape and industrial purposes (City 2011). Recycled water provided by the City is produced at the Hale Avenue Resources Recovery Facility (HARRF), a recycled water treatment and disposal facility that is owned and operated by the City. The HARRF provides recycled water to other agencies as well as the City and excess recycled water that is not used by the City or sold to other recycled water customers, is disposed of via an ocean outfall (City 2011).

The City has in the past several years expanded the recycled water conveyance system towards the eastern areas of the City (recycled water pipelines, brine disposal pipeline and fiber optic conduits, recycled water pump station and recycled water storage tank). The City expanded its recycled water system to result in a more dependable and sustainable water supply and to be less dependent on imported water for the City (City 2011). On November 6, 2013, the City of Escondido adopted the Final IS/MND for the Recycled Water Easterly Main Extension (City File No. ENV 13-0007), which addressed

impacts that would occur from expanding the City's existing recycled water pipeline system to deliver recycled water to customers located east of downtown Escondido (City 2011). The Final MND for the Recycled Water Easterly Main Extension is incorporated by reference into this MND. The Recycled Water Easterly Main Extension Project MND may be downloaded from the City of Escondido's website at: https://www.escondido.org/recycled-water-easterly-main-extension-project.aspx.

The City proposes to construct and operate the MFRO Facility to provide water for agricultural use (proposed project). The MFRO Facility would provide advanced treatment for Title 22 quality reuse water produced at the HARRF. The facility would utilize membrane filtration (e.g., ultrafiltration [UF] membranes) and reverse osmosis (RO) technologies sized for a total production capacity of 2.0 million gallons per day (mgd). This project component was originally conceptualized as part of the City's Potable Water Reuse Program (Reuse Program) identified in the Recycled Water Master Plan. The City is implementing this component of the Reuse Program to expedite a new, high-quality water supply to local agricultural growers, utilize existing water resources and help promote and support the local economy and agriculture. Agricultural producers are a vital part of Escondido's community and its economy. Avocados are one of the most important crops grown in San Diego County, and water quality for avocado production is important for quantity and quality of production. Growers maintain a high demand for water, specifically low-salinity water. Water must be low in chlorides and other constituents to avoid leaf burn, root rot, and the need for excessive flushing. Salinity management issues take priority due to the drought in California forcing a shift to higher salinity source water. For these reasons, infrastructure to provide more recycled water with lower salinity to the growers is necessary to offset agricultural potable demand, decrease demand for imported water, and to continue efficient agricultural production.

The project would also assist in off-loading the City's ocean outfall by reducing the amount of water discharged to the ocean from the HARRF. The existing land outfall is nearing flow capacity. The MFRO Facility would treat and distribute the recycled water to agricultural users, thereby redirecting water via reuse and reducing the flow to the existing outfall.

3.4 PROJECT COMPONENTS

The proposed project would consist of a commercial/industrial-like building (MFRO Facility), which would include partitioned areas to house the MFRO equipment, pumps, chemical storage, electrical room, control room, restrooms, break room, and janitorial closet. The MFRO Facility treatment equipment is proposed to operate with a minimum production capacity of 0.5 mgd (350 gallons per minute [gpm]) and maximum RO effluent production capacity of 2.0 mgd (1,390 gpm) which would be blended with conventionally (tertiary) recycled water for distribution. The MFRO Facility would be designed to accommodate installation of additional equipment in the future that would provide an additional 1.0 mgd of production capacity. The project would also include the product water pipeline, which is a one-mile long pipeline that would transport the product water to an existing recycled water pipeline. The proposed site plan is shown on Figure 3, *Site Plan*. The proposed pipeline alignments from the MFRO site to the offsite connections are shown on Figure 4, *MFRO Yard Piping Plan*. Conceptual views of the site from the north, south, east, and west are shown on Figure 5, *MFRO Site Elevations*. Each component is further described below.

3.4.1 Influent Pipeline

The project would connect to the existing influent pipeline located adjacent to the Escondido Creek concrete-lined Flood Control Channel along the southern side of the project site. Buried site piping would include the influent supply pipeline for the MF system, the storm flow bypass pipeline to the Product Water Tank, the Title 22 recycled water bypass, and RO permeate pipelines to the Product Water Tank. The Title 22 recycled water bypass and RO permeate pipelines would blend to provide the desalted water quality for the agriculture users.

3.4.2 MFRO Process Building

The process building would be approximately 25,000 square feet with dimensions of approximately 192 feet long by 130 feet wide. The building would be divided into an equipment room to house the MFRO equipment, electrical room, and control room. Two restrooms would also be provided. All equipment would be selected based on mechanical specifications to meet noise and efficiency standards.

The proposed project would require chemical feed and storage facilities for treatment. Chemical storage and feed systems would be located inside a partially enclosed area adjacent to the MFRO building. This area would share a wall with the MFRO building, have a wall to the north, then be open to the east and south. Chemical storage would be supplied by a combination of totes and permanent tanks. Storage totes would be removed and replaced when empty. Permanent tanks would be filled when empty.

Each chemical would have its own containment area. These areas would be oriented such that a noncombustible partition could be installed to keep them separate. The sulfuric acid would be stored in a dedicated area. Table 1, *Chemical Hazard Ratings*, lists the chemical hazard rating and the maximum allowable storage quantity per the Fire Code.

Table 1
CHEMICAL HAZARD RATINGS

Chemical	Hazard Rating	Maximum Allowable Quantity[1]	Maximum Allowable Storage Quantity Exceeded?
Sodium Hypochlorite, 12.5%	Health Hazard – Corrosive	500 gallons	Yes
Liquid Ammonium Sulfate, 40%	None	None	No
Sulfuric Acid, 93%[2]	Physical – Class 2 Water Reactive	50 pounds (3.2 gallons of 93% sulfuric acid)	Yes[3]
Sodium Bisulfite, 38%	Health Hazard – Corrosive	500 gallons	No
Antiscalant, 100%	None	None	No
Sodium Hydroxide, 50%	Health Hazard – Corrosive	500 gallons	Yes
Citric Acid, 50%	None	None	No

1. Above this quantity, secondary containment, sprinklers, and ventilation are required as stipulated by the IFC.
2. Storage of sulfuric acid in amounts greater than 25 tons (3,247 gallons of 93% sulfuric acid) requires a detached building.
3. Sulfuric acid storage amount exceeds the maximum allowable quantity; thus, it is subject to the requirements in Chapter 50 of the IFC. However, the storage amount does not exceed 25 tons; thus, a detached building is not required.

I:\PROJECTS\E\ESC\ESC-31_MFRO\Map\SMND\Fig5_Elevation.indd ESC-31 2/14/2020 - SAB

The height of the MFRO Process Building would be up to approximately 32 feet to the top of the roof ridgeline. The site is located in an area zoned as M-2 – General Industrial, and buildings and other on-site facilities would be set back from the property line in conformance with the Industrial Development Standards setback criteria. The proposed building would be a pre-engineered metal building.

3.4.3 Surge Tank

Surge mitigation improvements would include a surge tank with supporting compressed air system. The surge tank would control surge pressures in the 24-inch high service pump discharge transmission pipeline. The steel pressure tank would be approximately 1,400 cubic feet. It would be located outdoors adjacent to the Product Water Tank. The air compressors would be located in the MFRO Facility and would use food-grade lubrication.

3.4.4 MF Feed Strainers

Prior to entering the MF membrane units, the feed water would be passed through self-cleaning automatic strainers. The strainers would remove large particles and debris that could potentially damage the MF membranes.

3.4.5 MF System

MF through microfiltration or UF membranes would be part of the proposed project as a pretreatment process for the RO system. MF is a physical separation process in which suspended/colloidal solids are removed from the feed stream through a porous membrane.

The MF system would be provided with clean-in-place (CIP) and maintenance wash systems to clean and condition the membranes. The systems consist of chemical addition, air scour, and reverse filtration pumping systems and the associated piping and controls. The MF membranes would periodically undergo backwash and chemical cleaning to remove foulants from the surface.

3.4.6 Inter-Process Storage Tank

One 240,000 (usable) gallon inter-process storage tank would be provided between the MF and RO systems to equalize the MF filtrate flows prior to being fed to the RO systems. The tank would be approximately 50-feet in diameter and 32-feet tall.

3.4.7 RO Transfer Pump Station and Cartridge Filters

Three, approximately 30-horsepower (hp), RO transfer pumps would pump MF filtrate from the inter-process tank through the cartridge filters to the suction side of the RO feed pumps. Cartridge filters are recommended to guard against solids entering the system between the processes from tanks, gaskets, chemical impurities and other like causes. Each pump would be constant speed discharging to a common header that carries the flow to the cartridge filters and ultimately the RO trains. The cartridge filters would require replacement every 6 to 12 months. The cartridge filters are provided to protect the RO membranes from long-term solids deposition.

3.4.8 RO Feed Pump Station

To allow for different operating conditions on individual membrane trains, as determined by the degree of membrane fouling, each RO train would be served by its own dedicated variable speed feed pump. Four, approximately 100-hp, RO feed pumps would boost the pressure of the RO feed water to the RO membranes.

3.4.9 RO System

The RO system is a high-pressure membrane process designed to remove dissolved constituents from the process feed water. Permeate produced by RO vessels would be combined into one permeate stream. The system would comprise four trains that can be operated independently and each have a permeate capacity of 0.5 mgd.

Similar to the MF membranes, the RO membrane elements would require periodic cleaning to restore permeability. The RO membranes are typically cleaned when the permeability has reduced to approximately 85 percent of the initial stable conditions. The required cleaning frequency varies from once every three to six months to once per year.

3.4.9.1 RO Flush System

When a RO train is shut down for longer than 30 minutes, the membranes should be flushed with permeate to avoid fouling. The RO Flush System is a low pressure; low flow process in which two pressure vessel volume exchanges would be pumped through the train to waste. The flush system would include the following inside the Process Building:

- One vertical cylindrical, flat-top, approximately 6,500-gallon tank; and
- Two (one duty and one standby) horizontal centrifugal, approximately 2 hp pumps. Each pump's capacity would be 60 gpm.

3.4.10 Product Water Tank

The proposed project product water would be blended with Title 22 recycled water to meet agriculture reuse water quality requirements. The ratio of Title 22 water to RO permeate is anticipated to range from 0 to 2.0. A steel tank would be installed onsite for blend and storage purposes. The overall tank dimensions are approximately 104 feet in diameter and 34 feet tall. The product water tank would provide a total useable storage volume of approximately 1,000,000 gallons.

3.4.11 Onsite Pipeline Corridor

Pipelines entering the project site from the channel or south side include the HARRF reuse influent recycled water pipeline, brine/reject waste return pipeline, sewer line, and fiber optic conduit. See Figure 4 for the alignments of the proposed new influent recycled water line, brine/reject waste return pipeline, and sewer line. Pipeline connections would not encroach within Reidy Creek.

The approximate length of each pipeline from the MFRO parcel fence line to their connection points to existing infrastructure would be the following:

- Brine line (16-inch diameter high-density polyethylene [HDPE] pipeline): 186 feet
- Sewer line (18-inch polyvinyl chloride [PVC] pipeline): 336 feet
- Recycled water line (24-inch ductile iron pipe [DIP] pipeline): 191 feet

Potable water, electric and facility product water would enter/exit from Washington Avenue. All process piping outside of the building would be buried, with the exception of areas near connections for accessibility.

3.4.12 Storm Water Biofiltration Basin

An existing 54-inch storm drain is located along the east side of the site with a curb inlet close to the corner of West Washington Avenue and Rock Springs Road. The Escondido Creek concrete-lined Flood Control Channel drainage channel is also located south of the project site.

The project includes an on-site storm water biofiltration basin to capture, treat, and release the water at a controlled rate as dictated by the City's storm water requirements. The basin directs water into the existing 54-inch storm drain and then conveys the storm water to the Escondido Creek Flood Control Channel drainage channel, utilizing the existing channel outlet.

3.4.13 Sanitary Sewer

Waste streams including the MF feed pump flush, MF backwash, strainer backwash, MF and RO CIP neutralized waste, RO cartridge filter waste flow, water tank overflows and sanitary sewer waste would be discharged to a proposed onsite waste collection system prior to discharge to the sanitary sewer and conveyed to the HARRF for treatment. The proposed sewer system would convey wastewater flows via an 18-inch sewer pipeline approximately 1,300 feet long to the existing 21-inch pipe located on the north side of the Escondido Creek Channel.

3.4.14 Product Water Pump Station

The product water (facility produced, blended water) pump station would supply reuse water to the City's Hogback Reservoir located on a hilltop east of the City limits in unincorporated San Diego County south of Mountain View Drive and to the agriculture distribution system. The pump station would consist of four 250-hp pumps (three duty and one standby), each rated for 1,820 gpm to meet peak period demands. The pumps would be electric motor driven and equipped with variable frequency drives to supply wide varying seasonal demands. Due to the elevation of the Hogback reservoir, an intermediate booster pump station is to be located along the recycled water alignment and situated at Mountain View Park on Glenridge Road. This pump station was included as part of the Recycled Water Easterly Main Extension Project MND (as described in Section 2.3) and is not further analyzed in this document.

3.4.15 Product Water Pipeline

The product water pipeline would transport the blended product water to the existing recycled water pipeline. As shown on Figure 2, the 24-inch diameter approximately 1-mile product water PVC pipeline would exit on the northeast corner of the MFRO Facility and head east along West Washington Avenue. The pipeline would cross Reidy Creek, then Caltrans ROW between North Broadway and Waverly Place.

The pipeline would turn south at Waverly Place and connect to the existing 24-inch ductile iron pipe located within the roadway ROW north of Escondido Creek. No project components would encroach within the creek channel.

The pipeline would primarily reside within the City's ROW with a short segment encroaching into Caltrans ROW. The new pipeline alignment would be placed accordingly to minimize disruption to the local community, commercial businesses, and local traffic, and limit the number of utility crossings. Additionally, the pipeline alignment would be placed to meet the requirements of California Department of Public Health for separation of water mains and non-potable pipelines.

3.4.16 Electrical Systems

Electrical power for the proposed project would be supplied by the San Diego Gas & Electric (SDG&E) via an outdoor 3,000 kilovolt-ampere (kVA) pad mounted transformer at 480 volt (V). All electrical equipment would be located inside the process building electrical room. Standby power would be provided by an outdoor 480V, 1,750-kilowatt diesel engine generator with sound mitigating enclosure. The engine-generator package would be approximately 60 feet long, 13 feet wide, and 18 feet high. The engine-generator enclosure would be designed to meet the City's Municipal Code sound thresholds at the property line for the receiving land use. The exhaust particulate filter/silencer would be provided and sized to meet San Diego County Air Pollution Control District (SDCAPCD) requirements as needed. The engine generator would provide standby power to necessary electrical and controls equipment, security systems, influent control valves, Product Water Pump Station, RO flush systems, and electrical rooms HVAC systems. The engine-generator would only operate during loss of utility power. However, it would be exercised on a monthly basis during business hours and within SDCAPCD operational limits.

3.4.17 Noise Control

All process, pumping and chemical feed and storage equipment would be located inside of the buildings as necessary to meet the City's Municipal Code for sound level limits at the property line for the receiving land use. As described above, the engine-generator would only be used in an emergency in the event electricity is not provided to the site, and once a month for exercise recommended by the manufacturer. The engine-generator enclosure is designed to meet the City's Municipal Code sound thresholds at the property line.

3.4.18 Site Access

Facility site access would be provided on the west side of the parcel, from a private driveway off of West Washington Avenue. The road would enter the parcel, circle around the MFRO Facility, and then reconnect to create a loop. Motorized gates would be provided at the fence line around the MFRO Facility at both the entrance and exit of the facility. There is also an existing emergency exit/entrance off of West Washington Avenue that would be maintained and used as necessary for emergency vehicles only. There is one more access road into the parcel at the south end from the bridge that crosses the Escondido Flood Control Channel. This is intended to be a less commonly used access road, and there would be a manual access gate at the MFRO Facility fencing. Parking would be provided at the west side of the MFRO building, adjacent to the administrative areas.

3.4.19 Security

3.4.19.1 Wall and Fencing

The proposed project would include security fencing. The existing fence along Washington Avenue would be removed and replaced with 8-foot high wrought iron fencing. Fencing along other property lines may be spot repaired or modified but are generally considered suitable for the parcel. There would also be chain-link fencing around the MFRO facility, with motorized gates to allow access.

3.4.19.2 Security System

A security system would be provided including secured plan entrances and strategically placed fixed-view security cameras. The plant entrances would be equipped with a security camera and an electric gate requiring an access code and/or personnel badge scanner for entry. Cameras would also be installed near the rooflines of the facility to monitor the entrance to the opposing structures. Additional fixed-view security cameras would be placed on the south side of the building where permanent outdoor equipment may be monitored.

3.4.20 Landscaping

New perimeter ornamental landscaping would buffer and minimize views the proposed facility components and consist of low maintenance, low demand and fast-growing plantings including trees. A connection to the facility effluent pipeline would be provided with metering for landscape reuse irrigation. Effluent management bio-retention areas and other best management practices would also be incorporated into the landscape design.

3.4.21 Lighting

The proposed project would include dark bronze pole-mounted and building-mounted light-emitting diode (LED) lights in the facility. All pole-mounted lights would be 25 feet above grade. The outdoor lighting design would restrict any direct distribution of light beyond the site boundaries. Lighting would be in conformance with Title 24, of the California Code of Regulations (CCR) and the City's Lighting Ordinance (Chapter 33, Article 35, Sec. 33-713).

3.4.22 Decanting Facility and Storage Bins

Construction of the MFRO facility would displace existing facilities used by the Escondido Public Works and Utilities/Water Departments for vactor truck decanting and material storage. These facilities would be relocated within the site, as shown on Figure 3. Due to their size and requirements of the Escondido Storm Water Design Manual, they would require stormwater treatment within the site.

The decanting facility would be approximately 4,800 square feet in size, with four dump/wash bays and two concrete pads for dumpsters. The facility would be constructed to allow for drying and handling of material from vactor trucks, the contents and volumes of which are different for each Department. One bay will be reserved for cleaning of street sweeping vehicles. Decanted liquid waste from all bays would drain to a clarifier (sand/oil separator) prior to discharging to the sanitary sewer system. The decanting facility would be roofed or have a rain valve, and storm water runoff would drain through a pipe to the MFRO treatment basin.

The material storage bins are open loading bins which house material used for City Public Works and Utilities Water operations. The size of the relocated concrete pad is approximately 12,250 square feet. Contents of the loading bins include raw bitumen/asphalt, mulch, greenery, gravel, class 2 base, shopping carts/large appliances, dirt, and trash. These bins are not currently covered with a roof, but the relocated bins would be designed to accommodate the future installation of a roof. Runoff from the bins would be treated either through a piped connection to the MFRO facility stormwater treatment basin (if roofed) or through a separate stormwater treatment facility (if unroofed).

3.5 PROJECT CONSTRUCTION

Project construction is anticipated to be approximately 24 months. Construction would occur Monday through Friday; construction hours would be 7:00 a.m. to 4:30 p.m. The maximum construction crew is expected to range from four to 50 persons but would vary during the course of the proposed project construction in accordance with the means and methods of the contractor.

It is anticipated that soil import/export would be limited via a balanced grading plan. A maximum of twenty-four daily truck trips would be a reasonable limitation importing/exporting soil. Soil hauling would occur over approximately one month. Any disposal of the excavated materials would be disposed of at an appropriate permitted disposal site depending on the type of material. Onsite soils are anticipated as suitable for fill.

3.5.1 Construction Equipment

Construction of the proposed new facilities would involve the use of a wide variety of heavy construction equipment on the site. The majority of the equipment and vehicles would be associated with the site preparation and grading, structural and paving phases of construction. Large construction equipment, including backhoes, bore/drill rigs, cement mixers, industrial saws, compactors, cranes, excavator, forklifts, graders, haul trucks, loaders, pavers, rollers, sweepers, trenchers would be used during the construction phase of the proposed project.

3.5.2 Pipeline Construction

The maximum trench depth for the onsite pipeline connections and the product water pipeline would be 8.5 feet deep. The maximum trench width would be 6 feet wide (12 inches clear on each side of a 24-inch pipe).

3.5.3 Building Foundations

Slabs on grade would be supported with a 6-inch layer of untreated aggregate base overlain by a 10-millimeter thick impermeable plastic membrane. The tank and building foundations would be supported on 3 feet of geogrid reinforced soil (geogrid spaced at 12-inch intervals in the soil). On-site soils could be used for fill, compacted to 90 percent of its maximum dry density.

3.5.4 Traffic Control Plan

A Traffic Control Plan (TCP) would be developed with both the Caltrans Manual of Traffic Control Devices for Construction and Maintenance Work Zones and the Standard Specifications for Public Works Construction, latest edition. The TCP would describe work hours, haul routes, work area delineation,

traffic control and flagging. The plan would aim to limit lane closures during peak traffic hours to the extent possible. To facilitate pedestrian safety, roads would be restored to normal operation by covering trenches with steel plates outside of allowed working hours or when work is not in progress. Prior to construction, the City would coordinate with facility owners and/or administrators of sensitive land uses such as police and fire stations, hospitals, and schools. The City would provide advance notification to facility owners and/or operators of the timing, location, and duration of construction activities and lane closures. All roads shall remain passable to emergency service vehicles at all times. Road work construction notification would be provided with "Road Work Ahead" warning signs and speed control to achieve required speed reductions for safe traffic flow through the work zone. The City would coordinate with the North County Transit District so the transit provider can temporarily relocate or reconfigure bus routes or bus stops in the work zone as it deems necessary. A contact person would be designated for responding to construction-related issues. The name and phone number of the liaison will be conspicuously posted at the construction site, and on all advanced notifications. This person would take steps to resolve complaints.

3.5.5 Vector Control Program

In accordance with the County of San Diego Vector Control Program, the project would:

- Be constructed in a manner to minimize standing water resulting from construction-related depressions created by grading activities and vehicle tires, tree pits, and landscaping.
- Ensure BMPs and drainage areas do not create a potential mosquito breeding source (an area capable of holding at least a half-inch of water for more than 96 hours).

3.6 PROJECT OPERATION AND MAINTENANCE DETAILS

The proposed project would require one full-time on-site employee. Additional employees would be required for monthly routine facility maintenance, delivery, and removal of chemicals. In addition, nine chemical deliveries would be expected monthly for normal operation of the facility.

3.7 RESPONSIBLE AGENCIES, PERMITS, AND APPROVALS

The City is both the project proponent and the Lead Agency under CEQA. In its role as Lead Agency, the City is responsible for ensuring the adequacy of this IS/MND. The City is seeking financing from the State Water Resources Control Board (SWRCB) Clean Water State Revolving Fund Program for the project. Public agencies, other than the Lead Agency, that have discretionary authority over a project, are considered responsible agencies; therefore, SWRCB is considered a responsible agency for this project. Additionally, implementation of the proposed project may require that the City obtain approval, permits, licenses, certification, or other entitlements from various state and local agencies, including:

- San Diego Regional Water Quality Control Board (Region 9) Construction General Permit
- SDAPCD Authority to Construct and Operate
- Caltrans Encroachment Permit and Traffic Control Plan
- Metropolitan Water District reimbursement funding: The City of Escondido is proposing to obtain financial assistance for the project through the Local Resources Program (LRP) that is

administered by the Metropolitan Water District of Southern California (Metropolitan). The LRP provides a funding mechanism to public and private water utilities to encourage local development of recycled water and recovered groundwater. Metropolitan may rely on information in this document for future funding and decisions related to this project.

- City of Escondido Approvals, including Administrative Plot Plan and Design Review (as required):
    - Plot Plan Application (City File No. ADM 19-0032)
    - Building and Grading Permit
    - Roadway Encroachment Permit
    - Construction Staging and Traffic Management Plan
    - Construction Stormwater Pollution Prevention Plan

4.0 ENVIRONMENTAL INITIAL STUDY CHECKLIST

The lead agency has defined the column headings in the environmental checklist as follows:

A. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an Environmental Impact Report (EIR) is required.

B. "Less Than Significant with Mitigation Incorporated" applies where the inclusion of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." All mitigation measures are described, including a brief explanation of how the measures reduce the effect to a less than significant level. Mitigation measures from earlier analyses may be cross-referenced.

C. "Less Than Significant Impact" applies where the project does not create an impact that exceeds a stated significance threshold.

D. "No Impact" applies where a project does not create an impact in that category. "No Impact" answers do not require an explanation if they are adequately supported by the information sources cited by the lead agency which show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project specific screening analysis).

The explanation of each issue identifies the significance criteria or threshold used to evaluate each question; and the mitigation measure identified, if any, to reduce the impact to less than significance. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration [CEQA Guidelines Section 15063(c)(3)(D)]. Where appropriate, the discussion identifies the following:

a) Earlier Analyses Used. Identifies where earlier analyses are available for review.

b) Impacts Adequately Addressed. Identifies which effects from the checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and states whether such effects were addressed by mitigation measures based on the earlier analysis.

c) Mitigation Measures. For effects that are "Less Than Significant with Mitigation Incorporated," describes the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

I. AESTHETICS

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:					
a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☐	■
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	■
c)	Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	■	☐
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	■	☐

a) Have a substantial adverse effect on a scenic vista?

No Impact. A scenic vista is generally defined as a public viewpoint that provides expansive or notable views of a highly valued landscape and are typically identified in planning documents, such as a community plan, but can also include locally known areas or locations where high-quality public views are available. The City of Escondido General Plan does not identify the project site as a scenic vista (City 2012). Additionally, the project site is not in a location where high-quality public views are available. The City of Escondido General Plan classifies the project site and surrounding areas as General Industrial Land Use. An asphalt construction company and waste disposal site are located to the north of the project site; Escondido City Public Works Yard, and a mix concrete supplier to the east; Sprinter maintenance yard, heavy industrial and a variety of commercial retailers to the south; and industrial uses and a mix of commercial retailers and Interstate 15 to the west. Implementation of the project would have no effect on a scenic vista. Therefore, no impacts would occur.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. There are no officially designated state scenic highways in the vicinity of the project site. The nearest state scenic highway is State Route (SR) 52, which is approximately 18.5 miles south of the project site. The nearest eligible state scenic highway not officially designated is I-5, which is approximately 11.5 miles west of the project site. Additionally, the project site is not located near a scenic roadway identified in the City's General Plan (City 2012). Therefore, the proposed project would not damage scenic resources within a state scenic highway. Impacts would not occur.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less than Significant Impact. According to the City of Escondido General Plan, the project site and its surroundings are currently classified as General Industrial Land Use (City 2012). The area consists of commercial and industrial buildings surrounding the project site, while the site itself is currently occupied with one single-wide trailer used by a non-profit recycling group, one quadruple-wide trailer used for training by various City departments, a metal storage building, and an asphalt paved parking lot. Photos of the site are shown in Figures 6a and 6b, *Site Photos.* Implementation of the proposed project involves the construction of a water treatment facility and related facilities such as underground utility conduit and pipelines. The buildings and structures would be up to approximately 32 feet in height to the top of the roof ridgeline, while tanks would have maximum heights of 34 feet. As such, the project would not be significantly taller than most existing and planned structures in the area. Additionally, although the project would be removing ornamental trees along West Washington Avenue, they would be replaced with ornamental landscaping along the street in conformance with the City's Grading and Landscape Ordinances (Articles 55 and 66) consisting of trees and shrubs that would add visual interest to the site and provide screening of the facility from the street. Temporary visual disturbances to complete work for underground electrical conduit routing and pipeline connections along the roadways would be restored to existing conditions following completion of the project. Therefore, impacts would be less than significant.

d) Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Less than Significant Impact. There are two primary sources of light: light emanating from building interiors that passes through windows and light from exterior sources (e.g., street lighting, parking lot lighting, building illumination, security lighting, and landscape lighting). The introduction of light can be a nuisance by affecting adjacent areas and diminishing the view of the clear sky depending on the location of the light sources and its proximity to nearby light-sensitive areas.

The project site is located in an area that is developed with primarily commercial and industrial uses. The existing light conditions in the project area include building lights, security lights, and the surrounding commercial and industrial uses. There is also nearby street lighting.

Construction activities would occur Monday through Friday during permitted daylight hours between 7:00 a.m. and 4:30 p.m. Nighttime construction is not planned.

Proposed above-ground facilities and buildings constructed as part of the proposed project would contain lighting for security and maintenance purposes. Site lighting would consist of pole-mounted and building-mounted LED lights, which would conform to the California Building Standards Code, Title 24, as well as the City's zoning code standards that regulate outdoor lighting. All pole-mounted lights would be approximately 25 feet above grade. The lighting would be similar to the existing lighting surrounding the project and would blend into that existing lighting. Therefore, impacts related to lighting would be less than significant.

The proposed project would not introduce a substantial source of glare to the project site that would affect views in the area because the project would construct buildings using typical building materials

(i.e., stucco siding, standing seam roofs), which would not create substantial daytime glare. Sources of daytime glare would include cars within the project site; however, the project would not include a substantial number of cars visiting the project site. As such, impacts would be less than significant.

II. AGRICULTURE AND FORESTRY RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	■
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	■
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	■
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	■
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non- forest use?	☐	☐	☐	■

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. According to the Farmland Mapping and Monitoring Program of the California Department of Conservation (California Department of Conservation 2015), the project site is classified as Urban and Built-Up Land and does not contain any Prime Farmland or Farmland of Statewide Importance. The project site is currently developed with one single-wide trailer used by a non-profit recycling group, one quadruple-wide trailer used for training by various City departments, and an asphalt paved parking lot. The remainder of the site is used by the City Department of Public Works (DPW) for storage and heavy equipment training, except for a location on the west side that is used by EDCO, a waste disposal corporation, for the storage of empty roll-off bins. Implementation of the project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use. Therefore, no impact would occur.

A view from the center of the site facing the northeast corner, showing the trailers currently on the site.

A view of the trailers currently on the site, taken from the northeast corner facing west.

I:\PROJECTS\E\ESC\ESC-31_MFRO\Map\SMND\Fig6b_Photos.indd ESC-31 2/14/2020 - SAB

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. As stated in item II.a, the project site is located in an area classified as Urban and Built-Up Land where neither farmland nor agricultural resources are present. The Williamson Act is only applicable to parcels within an established agricultural preserve consisting of at least 20 acres of Prime Farmland, or at least 40 acres of land not designated as Prime Farmland. The Williamson Act is designed to prevent the premature and unnecessary conversion of open space lands and agricultural areas to urban uses. The Williamson Act enables local governments to enter into contracts with private landowners for the purpose of restricting specific parcels of land for use as agricultural or related open space. The project site is not zoned for agricultural use. Additionally, it is not within an established agricultural preserve consisting of at least 20 acres of Prime Farmland or at least 40 acres of land not designated as Prime Farmland, so it would not conflict with a Williamson Act contract. According to the State of California Williamson Act Contract Land Map compiled by the California Department of Conservation (California Department of Conservation 2017), the project site is located in an area classified as Urban and Built-Up Land where the Williamson Act does not enforce development restrictions. Therefore, no impact would occur.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

No Impact. There is no land zoned as forest land or timberland that exists within the project site or within its vicinity. Therefore, the proposed project would not conflict with existing zoning for forest land or timberland, and there would be no impact.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. As stated in item II.c, there is no land zoned as forest land or timberland that exists within the project site or its vicinity. As such, implementation of the proposed project would not result in the loss of forest land or conversion of forest land to non-forest use. No impact would occur.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. As stated in item II.a, the project site is located in an area classified as Urban and Built-Up Land, where neither farmland nor agricultural resources are present. The proposed project entails the construction of a MFRO facility, which would process recycled water that would be used for agriculture. The project would not result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use. Therefore, there would be no impact.

III. AIR QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	■	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	■	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	■	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	■	☐

The discussion below is based on a technical report prepared by HELIX Environmental Planning, Inc. (HELIX; 2020a), attached to this Initial Study as Appendix A.

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less than Significant Impact. The project site is located within the San Diego Air Basin (SDAB), which is governed by the San Diego Air Pollution Control District (SDAPCD). The SDAPCD develops and administers local regulations for stationary air pollutant sources within the SDAB, and also develops plans and programs to meet attainment requirements for both federal and state ambient air quality standards (National Ambient Air Quality Standards [NAAQS] and California Ambient Air Quality Standards [CAAQS], respectively). The SDAPCD and the San Diego Association of Governments (SANDAG) are responsible for developing and implementing the clean air plan for attainment and maintenance of the Ambient Air Quality Standards (AAQS) in the SDAB. The SDAPCD has developed a series of policies and guidelines collectively known as the Regional Air Quality Strategy (RAQS). The RAQS outlines the SDAPCD's plans and control measures designed to attain the state air quality standards, including applicable portions of the California State Implementation Plan (SIP).

Included in the RAQS are short- and long-term goals for those pollutants that the SDAB is designated as a "nonattainment" area because the SDAPCD does not meet the NAAQS or CAAQS. Criteria pollutants of primary concern include ozone, carbon monoxide (CO), nitrogen dioxide (NO_2), particulate matter (including both respirable particulate matter 10 microns or less in diameter [PM_{10}] and fine particulate matter 2.5 microns or less in diameter [$PM_{2.5}$]), sulfur dioxide (SO_2), and lead. The SDAB is currently designated as a basic nonattainment area for the 8-hour NAAQS for ozone. The SDAB is designated as being in attainment for all other applicable criteria pollutants under the NAAQS. The SDAB is currently classified as a nonattainment area under the CAAQS for ozone, PM_{10}, and $PM_{2.5}$. It is in attainment for CO, NO_2, SO_2, and lead relative to state air standards.

The RAQS rely on SANDAG's growth projections, which are based in part on city and San Diego County general plans. As such, projects that propose development consistent with the growth anticipated by the applicable general plan(s) are consistent with the RAQS and applicable portions of the SIP. In the event that a project proposes development which is less dense than anticipated within the General Plan, the project would likewise be consistent with the RAQS.

The City of Escondido General Plan EIR (City 2012) assessed whether development consistent with the General Plan would conflict with or obstruct implementation of the RAQS and SIP. The EIR concluded that the overall increase in housing units and corresponding population increase associated with the General Plan would be consistent with the SANDAG growth projections identified for the City in the 2009 RAQS and concluded that development consistent with the General Plan would be consistent with the RAQS and SIP.

The proposed project includes the construction of a water treatment facility to provide additional advanced treated recycled water to agricultural growers in the area via existing and previously approved pipelines. Construction activities would be short-term and anticipated to consist of up to a maximum of 50 construction workers including management staff. The proposed project would require one new full-time employee and would not provide new residents to the area. In addition, workers would conduct monthly maintenance visits. Implementation of the proposed project would not substantially increase population growth and would not exceed the growth estimates identified in the General Plan. Furthermore, construction and maintenance jobs for the project would likely recruit from the local pool of labor and would not create conditions for employment growth that exceeds growth estimates for the area. While the project would generate criteria air pollutant emissions during construction and operation, emissions would be below the screening level thresholds set by the SDAPCD. The proposed project would be in conformance with the General Plan and would therefore be consistent with the RAQS and applicable portion of the SIP. Therefore, the project would not conflict with implementation of applicable air quality plans and impacts would be less than significant.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non- attainment under an applicable federal or state ambient air quality standard?

Less than Significant Impact. The project would generate criteria pollutants in the short-term during construction and the long-term during operation. To determine whether a project would result in emissions that would violate an air quality standard or contribute substantially to an existing or projected air quality violation, a project's emissions are evaluated based on the quantitative emission thresholds established by the SDAPCD.

The project's criteria pollutant emissions were calculated using the California Emissions Estimator Model (CalEEMod) Version 2016.3.2. CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and GHG emissions associated with both construction and operations from a variety of land use projects. The model was developed for the California Air Pollution Control Officers Association (CAPCOA) in collaboration with the California air districts. CalEEMod allows for the use of default data (e.g., emission factors, trip lengths, meteorology, source inventory) provided by the various California air districts to account for local requirements and conditions, and/or user-defined inputs.

Construction Emissions

Construction of the project would result in temporary increases in air pollutant emissions. These emissions would be generated in the form of fugitive dust emissions (PM_{10} and $PM_{2.5}$) and ozone precursor emissions (nitrogen oxides [NO_X] and reactive organic gas [ROG]). Construction is expected to begin July 2020 and extend through June 2022.

Construction emissions calculated using CalEEMod Version 2016.3.2 are provided in Appendix A of the Air Quality and Greenhouse Gas Emissions Technical Report prepared for the project, included as Appendix A to this MND (HELIX 2019a). The results of the calculations for project construction are shown in Table 2, *Construction Emissions*. The analysis assessed total annual emissions from individual construction activities, including demolition, building improvements, outdoor improvements, paving, and architectural coatings. The modeling assumes the application of water on all exposed areas during construction in compliance with SDAPCD Rule 55, *Fugitive Dust Control*. Based on CalEEMod version 2016.3.2, the control efficiency for watering two times per day is 55 percent.

Table 2
CONSTRUCTION EMISSIONS

Year	Maximum Daily Pollutant Emissions (pounds per day)					
	ROG	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
2020	2.9	38.4	17.2	<0.1	5.0	3.0
2021	2.4	21.6	20.1	<0.1	1.8	1.2
2022	45.8	29.0	19.7	<0.1	2.3	1.5
Maximum Daily Emissions	**45.8**	**38.4**	**19.7**	**<0.1**	**5.0**	**3.0**
Threshold	*75*	*250*	*550*	*250*	*100*	*55*
Significant Impact?	***No***	***No***	***No***	***No***	***No***	***No***

Source: CalEEMod (output data is provided in Appendix A)
ROG = reactive organic gas; NO_X = nitrogen oxides; CO = carbon monoxide; SO_X = sulfur oxides;
PM_{10} = particulate matter 10 microns or less in diameter; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter

As shown in Table 2, emissions of criteria pollutants and precursors related to project construction would be below the significance thresholds. Therefore, impacts from criteria pollutants and precursors generated during construction would be less than significant and no mitigation would be required.

Operational Emissions

Long-term operational sources of pollutant emissions include area, energy, mobile (transportation), solid waste, stationary equipment, and water and wastewater. Area source emissions are generated from on-site activities such as use of consumer products and landscaping maintenance activities. Energy source emissions would result from on-site electricity and natural gas usage. Mobile source emissions are generated from project-related vehicle trips, including one full-time employee at the site, five employees visiting the site for maintenance activities up to approximately 36 days per year, and up to nine monthly chemical deliveries.

The main operational emissions sources are associated with stationary equipment primarily due to the use of the proposed diesel-powered standby generator. A 1,750-kilowatt, 480-volt generator would require an engine of approximately 2,400 hp. The standby generator was assumed to operate monthly for maintenance and testing for a maximum of 4 hours on any one day and a total of approximately

16 hours per year. Table 3, *Operational Criteria Pollutant and Precursor Emissions*, presents a summary of maximum daily operational emissions for the proposed project.

Table 3
OPERATIONAL CRITERIA POLLUTANT AND PRECURSOR EMISSIONS

Category	Pollutant Emissions (pounds per day)					
	ROG	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Area	1.3	<0.1	<0.1	<0.1	<0.1	<0.1
Energy	<0.1	<0.1	<0.1	<0.1	<0.1	<0.1
Mobile	<0.1	0.3	0.2	<0.1	<0.1	<0.1
Stationary	3.0	47.9	16.1	<0.1	0.9	0.9
Total Daily Emissions[1]	**4.3**	**48.2**	**16.4**	**<0.1**	**1.0**	**0.9**
Threshold	*75*	*250*	*550*	*250*	*100*	*55*
Significant Impact?	***No***	***No***	***No***	***No***	***No***	***No***

Source: CalEEMod (output data is provided in Appendix A)
[1] Totals may not sum due to rounding.
ROG = reactive organic gas; NO_X = nitrogen oxides; CO = carbon monoxide; SO_X = sulfur oxides;
PM_{10} = particulate matter 10 microns or less in diameter; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter

As shown in Table 3, emissions of criteria pollutants and precursors during long-term operation of the project would not exceed the daily thresholds. Therefore, impacts from criteria pollutants generated during project operation would be less than significant and no mitigation would be required.

c) Expose sensitive receptors to substantial pollutant concentrations?

Less than Significant Impact. Sensitive populations (i.e., children, senior citizens, and acutely or chronically ill people) are more susceptible to the effects of air pollution than are the general population. Land uses that are considered sensitive receptors typically include residences, schools, playgrounds, childcare centers, hospitals, convalescent homes, and retirement homes. The closest existing sensitive receptors to the project site are single-family residences approximately 2,000 feet (0.38 mile) to the south. The closest existing sensitive receptors to the proposed pipeline construction area on Washington Avenue are multi-family residential buildings at the intersection of Washington Avenue and Centre City Parkway, and multi-family residential buildings at the intersection of Washington Avenue and Waverly Place. An analysis of the project's potential to expose sensitive receptors to pollutants during construction and operation is provided below.

Construction Activities

Toxic Air Contaminants

Diesel particulate matter (DPM) is the primary toxic air contaminant (TAC) that would be emitted during construction and would be generated from the use of off-road diesel equipment required for demolition, site grading, excavation, and other construction activities. Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer. The amount to which the receptors could be exposed, which is a function of concentration and duration of exposure, is the primary factor used to determine health risk. The generation of TAC emissions during construction would be variable and sporadic due to the nature of construction activity. The most intense use of construction equipment would be during the site preparation/grading phase which is anticipated to last 30 working days and the entire project

construction period is anticipated to last 24 months. The closest sensitive receptors to the MFRO site are approximately 2,000 feet (0.38 mile) to the south. Excavation for and construction of the product water pipeline would occur on West Washington Avenue and Waverly Place, and there are existing multi-family residential buildings within 40 feet of Washington Avenue. Construction activities for the product water pipeline would proceed linearly, with heavy equipment only operating in any one location for a few days before moving on. Therefore, due to the short duration and intermittent nature of construction activities, and due to the highly dispersive properties of DPM, project-related TAC emission impacts during construction would not expose sensitive receptors to substantial pollutant concentrations and the impact would be less than significant.

Operational Activities

Standby Generator

The proposed diesel-powered standby generator would be a source of DPM emissions. As stated above, the closest sensitive receptors to the project site are approximately 2,000 feet (0.38 mile) south of the project site. In addition, the generator would be required to be fitted with DPM reduction technology in compliance with applicable state Air Toxic Control Measures (ATCM), and/or federal New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP), and applicable SDAPCD regulations, including Rule 69.4.1, Stationary Reciprocating Internal Combustion Engines – Best Available Retrofit Control Technology. Therefore, due to the limited use of the standby generator, the distance to the nearest sensitive receptors, and the implementation of DPM reduction technology, the proposed standby generator would not expose sensitive receptors to substantial pollutant concentrations and the impact would be less than significant.

Carbon Monoxide Hotspots

A CO hotspot is an area of localized CO pollution caused by severe vehicle congestion on major roadways, typically near intersections. If a project increases average delay at signalized intersections operating at Level of Service (LOS) E or F or causes an intersection that would operate at LOS D or better without the project to operate at LOS E or F with the project, a quantitative screening is required. According to SANDAG's Transportation Forecast Information Center, the forecast volumes for Washington Avenue for the year 2020 range from 6,800 average daily trips (ADT) to 13,100 ADT (SANDAG 2013). The peak increase in daily trips associated with daily operation of all project components would be nominal compared to these traffic volumes (approximately 12 additional trips per day on Washington Avenue). The project would neither cause new severe congestion nor significantly worsen existing congestion. There would be no potential for a CO hotspot or exposure of sensitive receptors to substantial, project generated, local CO emissions. The impact would be less than significant.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than Significant Impact. Minor amounts of odor compounds associated with diesel heavy equipment exhaust and VOCs would be emitted during construction of the project. The odors of these emissions may be considered objectionable; however, construction emissions would be minor and temporary. Additionally, construction equipment associated with the project would be operating at various locations throughout the project site and pipe installation locations and would not take place all at once. Odorous hydrocarbons emissions would dissipate beyond the emissions sources and would only

affect receptors in the immediate vicinity of the construction site. Construction-related operations would also be temporary in nature and would cease at the completion of construction. Therefore, construction activities would not result in nuisance odors. Odor impacts associated with construction would be less than significant.

Wastewater treatment plants typically have the potential to cause odor complaints. However, unlike typical wastewater treatment facilities, the proposed MFRO facility would not process raw sewage. The MFRO would process Title 22 treated recycled water from the HARRF. This treated water is not a significant source of odors. The proposed standby generator would be an occasional source of diesel fumes. As stated above, the closest existing sensitive receptors to the project site are approximately 2,000 feet (0.38 mile) south of the project site. Therefore, long-term operation of the project would not result in other emissions (such as odors) adversely affecting a substantial number of people. Impacts would be less than significant.

IV. BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	■	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	☐	■	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	■	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	■	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	■	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	■

HELIX conducted a Biological Resources Report for the Escondido Membrane Filtration Reverse Osmosis Facility Project (HELIX 2020b). The study included a literature review, general biological survey, and preliminary jurisdictional delineation. The discussion below is based on this Biological Resources Report and is attached to this Initial Study as Appendix B.

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Less than Significant with Mitigation Incorporated. As part of the Biological Resources Report, a general biological survey of the project site was conducted by HELIX biologist Karl Osmundson on January 28, 2019. During the biological survey, there were no candidate, sensitive, or special status plant or wildlife species observed. However, there are trees, shrubs, and other vegetation present within and in the immediate vicinity of the project area that provide suitable nesting habitat for common birds and raptors protected under the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code (CFG Code). Construction of the proposed project could result in the removal or trimming of trees and other vegetation during the general bird nesting season (January 15 through September 15) and, therefore, could result in impacts to nesting birds in violation of the MBTA and CFG Code. Direct impacts could occur as a result of removal of vegetation supporting an active nest. Indirect effects could occur as a result of construction noise in the immediate vicinity of undeveloped areas supporting an active bird nest, such that the disturbance results in nest abandonment or nest failure. Impacts would be considered significant. Implementation of mitigation measure BIO-1 would reduce potentially significant impacts on nesting birds and raptors to less than significant levels.

Mitigation

BIO-1 **Avoidance of Nesting Birds and Raptors.** To prevent direct impacts to nesting birds, including raptors, protected under the federal MBTA and CFG Code, the City shall enforce the following:

Project activities requiring the removal and/or trimming of vegetation suitable for nesting birds shall occur outside of the general bird breeding season (January 15 to September 15) to the extent feasible. If the activities cannot avoid the general bird breeding season, a qualified biologist shall be retained to conduct a pre-activity nesting bird survey within seven days prior to the activities to confirm the presence or absence of active bird nests. If no active bird nests are found by the qualified biologist, then the activities shall proceed with the reassurance that no violation to the MBTA and CFG Code would occur. If an active bird nest is found by the qualified biologist, then vegetation removal and/or trimming activities at the nest location shall not be allowed to occur until the qualified biologist has determined that the nest is no longer active. Avoidance buffers should start at 300 feet for passerine birds and 500 feet for raptors. However, buffers could be reduced at the discretion of the qualified biologist depending on the bird species and project activities required in the vicinity of the active nest.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Less than Significant Impact. Sensitive natural communities include land that supports unique vegetation communities or the habitats of rare or endangered species or subspecies of animals or plants as defined by Section 15380 of the CEQA Guidelines. According to the Biological Resources Report, there

is no riparian habitat or other sensitive natural community that occurs on the project site. However, if not properly contained, construction activities could result in adverse indirect impacts to resources located immediately adjacent to work areas, including the Reidy Creek and Escondido Creek flood control channels. The City is required to create a Stormwater Pollution Prevention Plan (SWPPP), which would include construction Best Management Practice (BMPs). As a standard construction practice and regulatory requirement, the City would implement the BMPs from the SWPPP during construction, which may include installing and maintaining sediment and erosion control measures; employing appropriate standard spill prevention practices and clean-up materials; maintaining the project area free of trash and debris; maintaining effective control of fugitive dust; and properly storing, handling, and disposing of all toxins and pollutants including waste materials. Implementation of the BMPs would ensure that impacts to off-site sensitive natural communities are less than significant.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Less than Significant Impact. According to the Biological Resources Report, there are no federally protected wetlands on the project site, so there would be no impact to any wetlands within the project boundaries. Additionally, implementation of the BMPs described above in item IV.b would prevent adverse impacts to off-site federally protected wetlands, such as within the Reidy Creek flood control channel located downstream of the project, and Escondido Creek near the end of the MFRO product water pipeline alignment. Therefore, potential impacts on state or federally protected wetlands as a result of the proposed project would be less than significant.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less than Significant Impact. Wildlife corridors connect isolated habitat and allow movement or dispersal of plant materials and animals. Local wildlife corridors allow access to resources such as food, water, and shelter within the framework of the wildlife's daily routine and life history. Regional corridors provide these functions over a larger scale and link two or more large habitat areas, allowing the dispersal of organisms and the consequent mixing of genes between populations. A corridor is a specific route that is used for the movement and migration of species; it may be different from a linkage in that it represents a smaller or narrower avenue for movement. A linkage is an area of land that supports or contributes to the long-term movement of animals and genetic exchange by providing live-in habitat that connects to other habitat areas. Many linkages occur as stepping-stone linkages that are made up of a fragmented archipelago arrangement of habitat over a linear distance. According to the Biological Resources Report, the project site likely does not currently function as a wildlife corridor due to its developed nature and location within an industrial district. There is the potential for birds to use the trees on the site, but implementation of mitigation measure BIO-1 would reduce any impacts related to nesting birds to a less than significant level. Therefore, impacts to wildlife movement and nursery sites would be less than significant.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less than Significant Impact. According to the Biological Resources Report, the proposed project would not conflict with any local policies or ordinances protecting biological resources. The removal of mature trees would be replaced in conformance with the City's Grading and Landscape Ordinances (Articles 55 and 66). Therefore, impacts to mature trees would be less than significant.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. According to the Biological Resources Report, the City is not a participating entity of any adopted habitat conservation plans for the region, such as the North County Multiple Habitat Conservation Program (MHCP) or Multiple Species Conservation Program (MSCP); therefore, the project is not subject to any such plans and would have no conflicts. No impacts would occur.

V. CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☐	■
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	■	☐	☐
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	■	☐	☐

HELIX Environmental Planning, Inc. conducted a Cultural Resources Survey Report for the City of Escondido's Membrane Filtration Reverse Osmosis Facility Project (HELIX 2020c). The study included a records search, Sacred Lands File search, Native American outreach, a review of historical aerial photographs and maps, and a pedestrian survey of the project Area of Potential Effect (APE). The discussion below is based on this cultural report and is attached to this Initial Study as Appendix C.

a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

No Impact. The records search conducted by the South Coastal Information Center (SCIC) on March 25, 2019 as part of the cultural resources study indicated that 70 cultural resources have been previously recorded within a half-mile of the project APE, including one prehistoric isolate and 69 historic buildings. Ten of the historic buildings on file at the SCIC are mapped as being located along West Washington Avenue within the product water pipeline APE. However, all of the buildings are more accurately located outside of the APE, which encompasses the road right-of-way. Additionally, a review of historic and modern aerial imagery shows that all but one of these buildings have been demolished since

recordation in 1983. The building still in existence, occurring at 201 West Washington Avenue, is set back in the lot over 150 feet beyond the APE.

To supplement the information obtained from the SCIC record search, the National Register of Historic Places (NRHP) website was consulted. Five addresses listed on the NRHP are within one mile of the APE, and include the Hotel Charlotta, the Thomas/Turrentine House, the Bandy House, the A.H. Beach House, and the Howell/Leighton House. However, all five of these addresses are located over a half-mile from the project, so impacts resulting from the project would not occur.

On March 5, 2019 a HELIX archaeologist and Luiseño and Kumeyaay Native American monitors conducted a field investigation of the project site, which included intensive pedestrian survey of the APE. While the 1901 Escondido (1:125,000) topographic maps shows a railroad wye is shown extending north into the project site from the Escondido Branch of the California Southern Railroad (now the Sprinter rail line), the survey did not result in the identification of any cultural material or evidence of the railroad wye within the project APE. The records search and field investigation did not identify any historical resources located within the project site. Therefore, no impact would occur.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Less than Significant with Mitigation Incorporated. As stated above, the records search conducted by the SCIC indicated that 70 cultural resources have been previously recorded within a half-mile of the project APE. The 70 resources consist of 69 historic buildings and one prehistoric isolate. The prehistoric isolate did not occur within the project APE, so there is no record of archaeological resources occurring within the project APE. Furthermore, the field investigation of the project site did not result in the identification of any cultural material within the project APE. However, a Sacred Lands File search for the project APE completed by the Native American Heritage Commission (NAHC) yielded positive results. The San Luis Rey Band of Mission Indians indicated that sensitive discoveries have occurred immediately north of the Escondido Creek channel, and that the project area is considered sensitive to the tribe. Additionally, letters regarding the project were sent on March 8, 2019 to all contacts listed by the NAHC. One response been received. In a letter dated March 22, 2019, the Viejas Band of Kumeyaay Indians (Viejas) indicated that the general project area has cultural significance or ties to Viejas and requested that a Kumeyaay Cultural Monitor be on site for ground disturbing activities to inform them of any new developments such as inadvertent discovery of cultural artifacts, cremation sites, or human remains. In accordance with the requirements of AB 52, the City sent notification to four Native American Tribes traditionally and culturally affiliated with the project area on July 31, 2019. In a response dated August 12, 2019, the Rincon Band of Luiseño Indians (Rincon) identified the location as being within the Territory of the Luiseño people, and also within Rincon's specific area of historic interest. Furthermore, Rincon identified one Luiseño place name within close proximity to the project site. As such, Rincon requested the completion of an archaeological record search and assessment with results being provided to the Rincon Band. Rincon also indicated that although there were no tribal cultural resources identified on the project site, there is the potential for the proposed project to impact unknown tribal cultural resources and requested that a Luiseño Cultural Monitor be on the site for ground disturbing activities and also that the ten (10) Cultural Mitigation measures that were developed with the Tribes input be incorporated.

Due to the cultural sensitivity of the project region, the positive Sacred Land Files results, the responses to the letters sent to the contacts listed by the NAHC, and consultation undertaken in accordance with

the requirements of AB 52, the following mitigation measures are recommended to reduce potential impacts to archaeological resources to a less than significant level.

Mitigation

CUL-1 It is recommended the City should enter into a Tribal Cultural Resource Treatment and Monitoring Agreement (also known as a pre-excavation agreement) with a tribe that is traditionally and culturally affiliated (TCA) with the Project Location ("TCA Tribe") prior to issuance of a grading permit. The purposes of the agreement are (1) to provide the applicant with clear expectations regarding tribal cultural resources; and (2) to formalize protocols and procedures between the City and the TCA Tribe for the protection and treatment of, including but not limited to, Native American human remains; funerary objects; cultural and religious landscapes; ceremonial items; traditional gathering areas; and cultural items located and/or discovered through a monitoring program in conjunction with the construction of the proposed project, including additional archaeological surveys and/or studies, excavations, geotechnical investigations, grading, and all other ground disturbing activities.

CUL-2 Prior to issuance of a grading permit, the City shall retain a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (U.S. Department of the Interior 2008), and Native American monitors associated with TCA Tribes to implement the monitoring program. Because the project is located within shared territory of the Luiseno and Kumeyaay people, Native American monitors representing the interest and values of both the Luiseno and Kumeyaay people shall be retained for the project. The archaeologist shall be responsible for coordinating with the Native American monitors. This verification shall be presented to the City in a letter from the project archaeologist that confirm that Native American monitors representing both Luiseno and Kumeyaay TCA Tribes have been retained. The City, prior to any pre-construction meeting, shall approve all persons involved in the monitoring program.

CUL-3 The qualified archaeologist and a Native American monitor(s) shall attend the pre-grading meeting with the grading contractors to explain and coordinate the requirements of the monitoring program.

CUL-4 During the initial grubbing, site grading, excavation or disturbance of the ground surface, the qualified archaeologist and the Native American monitor shall be on site full-time. The frequency of inspections shall depend on the rate of excavation, the materials excavated, and any discoveries of tribal cultural resources as defined in California Public Resources Code Section 21074. Archaeological and Native American monitoring will be discontinued when the depth of grading and soil conditions no longer retain the potential to contain cultural deposits. The qualified archaeologist, in consultation with the Native American monitor, shall be responsible for determining the duration and frequency of monitoring.

CUL-5 In the event that previously unidentified cultural resources that qualify as historical, unique archaeological, and/or tribal cultural resources are discovered, the qualified archaeologist and the Native American monitor shall have the authority to temporarily divert or temporarily halt ground disturbance operation in the area of discovery to allow for the evaluation of potentially significant cultural resources. Isolates and clearly non-significant deposits shall be minimally documented in the field and collected so the monitored grading can proceed.

CUL-6 If a potentially significant historical, unique archaeological, and/or tribal cultural resource is discovered, the qualified archaeologist shall notify the City of said discovery. The qualified archaeologist, in consultation with the City, the TCA Tribe and the Native American monitor, shall determine the significance of the discovered resource. Recommendations for the resource's treatment and disposition shall be made by the qualified archaeologist in consultation with the TCA Tribe and the Native American monitor and be submitted to the City for review and approval.

CUL-7 The avoidance and/or preservation of significant cultural resources that qualify as historical, unique archaeological, and/or tribal cultural resources must first be considered and evaluated as required by CEQA. Where any significant resources have been discovered and avoidance and/or preservation measures are deemed to be infeasible by the City, then a research design and data recovery program to mitigate impacts shall be prepared by the qualified archaeologist (using professional archaeological methods), in consultation with the TCA Tribe and the Native American monitor, and shall be subject to approval by the City. The archaeological monitor, in consultation with the Native American monitor, shall determine the amount of material to be recovered for an adequate artifact sample for analysis. Before construction activities are allowed to resume in the affected area, the research design and data recovery program activities must be concluded to the satisfaction of the City.

CUL-8 As specified by California Health and Safety Code Section 7050.5, if human remains are found on the project site during construction or during archaeological work, the person responsible for the excavation, or his or her authorized representative, shall immediately notify the San Diego County Coroner's office. Determination of whether the remains are human shall be conducted on-site and in situ where they were discovered by a forensic anthropologist, unless the forensic anthropologist and the Native American monitor agree to remove the remains to an off-site location for examination. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the Coroner has made the necessary findings as to origin and disposition. A temporary construction exclusion zone shall be established surrounding the area of the discovery so that the area would be protected, and consultation and treatment could occur as prescribed by law. In the event that the remains are determined to be of Native American origin, the Most Likely Descendant, as identified by the Native American Heritage Commission, shall be contacted in order to determine proper treatment and disposition of the remains in accordance with California Public Resources Code section 5097.98. The Native American remains shall be kept in-situ, or in a secure location in close proximity to where they were found, and the analysis of the remains shall only occur on-site in the presence of a Native American monitor.

CUL-9 If the qualified archaeologist elects to collect any archaeological materials that qualify as tribal cultural resources, the Native American monitor must be present during any testing or cataloging of those resources. Moreover, if the qualified archaeologist does not collect the archaeological materials that qualify as tribal cultural resources that are unearthed during the ground disturbing activities, the Native American monitor, may at their discretion, collect said resources and provide them to the TCA Tribe for respectful and dignified treatment in accordance with the Tribe's cultural and spiritual traditions. The project archaeologist shall document evidence that all cultural materials have been curated and/or repatriated as follows:

1) It is the preference of the City that all tribal cultural resources be repatriated to the TCA Tribe as such preference would be the most culturally sensitive, appropriate, and dignified. Therefore, any tribal cultural resources collected by the qualified archaeologist shall be provided to the TCA Tribe. Evidence that all cultural materials collected have been repatriated shall be in the form of a letter from the TCA Tribe to whom the tribal cultural resources have been repatriated identifying that the archaeological materials have been received.

OR

2) Any tribal cultural resources collected by the qualified archaeologist shall be curated with its associated records at a San Diego curation facility or a culturally-affiliated Tribal curation facility that meets federal standards per 36 CFR Part 79, and, therefore, would be professionally curated and made available to other archaeologists/ researchers for further study. The collection and associated records, including title, shall be transferred to the San Diego curation facility or culturally affiliated Tribal curation facility and shall be accompanied by payment of the fees necessary for permanent curation. Evidence that all cultural materials collected have been curated shall be in the form of a letter form the curation facility stating the prehistoric archaeological materials have been received and that all fees have been paid.

CUL-10 Prior to the release of the grading bond, a monitoring report and/or evaluation report, if appropriate, which describes the results, analysis and conclusion of the archaeological monitoring program and any data recovery program on the project site shall be submitted by the qualified archaeologist to the City. The Native American monitor shall be responsible for providing any notes or comments to the qualified archaeologist in a timely manner to be submitted with the report. The report will include California Department of Parks and Recreation Primary and Archaeological Site Forms for any newly discovered resources.

c) Disturb any human remains, including those interred outside of dedicated cemeteries?

Less than Significant with Mitigation Incorporated. The project site is not located within or near a formal cemetery and is not known to be located on a burial ground. The project site is developed, and it is highly unlikely the proposed project would disturb any human remains during construction. Should human remains be uncovered during construction, compliance with existing regulations (State Health and Safety Code Section 7050.5), as described in mitigation measure CUL-8 above, would ensure that impacts would be less than significant.

VI. ENERGY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	■	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	■

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact.

Construction-related Energy Use

Energy used for construction would primarily consist of fuels in the form of diesel and gasoline. Fuel consumed by construction equipment would be the primary energy resource expended over the course of construction and would include the transportation of construction materials and construction worker commutes. Heavy-duty construction equipment associated with construction activities, haul trucks involved in the removal of construction and demolition materials, and smaller support equipment (such as lighting, air compressors, and pumps) would consume petroleum-based fuel. Construction workers would travel to and from the project site throughout the duration of construction, presumably in gasoline-powered vehicles.

Calculations of energy use for the project are based on the same assumptions used to calculate air quality criteria pollutant and GHG emissions. Table 4, *Construction Energy Use*, includes an estimation of energy usage from construction equipment. See Appendix D for additional construction energy usage data.

Table 4
CONSTRUCTION ENERGY USE

Phase	Total kBtu
Off-Road Construction Energy Use	
Demolition	341,631
Site Preparation/Grading	612,227
Pipeline Excavation and Construction	1,567,045
Street Paving Repair	221,046
Building Construction	5,759,731
Paving	221,046
Architectural Coating	23,647
Subtotal	**8,746,373**
On-Road Construction Energy Use	
Worker Vehicles and Haul Trucks	1,355,796
Construction Total	**10,102,168**

Source: HELIX 2020d (construction energy usage data provided in Appendix D)
kBtu = kilo-British thermal unit

While construction activities would consume petroleum-based fuels, consumption of such resources would be temporary and would cease upon the completion of construction. The petroleum consumed during project construction would also be typical of similar construction projects and would not require the use of new petroleum resources beyond what are typically consumed in California. Based on these considerations, construction of the project would not result in wasteful, inefficient, or unnecessary consumption of energy resources.

Operation-related Energy Use

During operations, the MFRO facility would use electricity for processing recycled water. Additional minor sources of energy use include maintenance and employee vehicle trips and periodic use of the backup generator. As noted in Section 2.4.16 of this Initial Study, electrical power for the project would be supplied by SDG&E. Energy use (in kilo-British thermal units [kBtu]) associated with gasoline, diesel, natural gas, and electricity usage for operation of the project is provided in Table 5, *Operational Energy Use*. See Appendix D for operational energy usage data.

Table 5
OPERATIONAL ENERGY USE

Energy Type	Quantity	kBtu
Gasoline (gallons)	341	42,342
Diesel (gallons)	1,101	153,101
Natural Gas (kBtu)	20,190	20,190
Electricity (KWh)	1,776,438	6,061,460
Total		**6,277,092**

Source: HELIX 2020d (operational energy usage data provided in Appendix D)
kBtu = kilo-British thermal unit; KWh = kilowatt-hour

The project would be required to meet the mandatory energy standards of CALGreen and the California Energy Code (Title 24, Part 6 of the CCR) and would benefit from the efficiencies associated with these regulations as they relate to ventilating, and air conditioning mechanical systems, and lighting.

The proposed project would create a MFRO Facility that would generate filtered water to be used for agricultural uses. Growers maintain a high demand for water, specifically for low-salinity water. For these reasons, infrastructure to provide more recycled water with lower salinity to the growers is necessary to offset agricultural potable demand, decrease demand for imported water, and to continue efficient agricultural production. In addition, the proposed project would reduce the discharge from the existing outfall and extend the life capacity of that facility, thus postponing capacity upgrades. Energy used by the facility would not be considered wasteful, inefficient, or unnecessary and impacts would be less than significant.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

No Impact. The project would be built and operated in accordance with existing, applicable regulations, which include, but are not limited to, the California Green Building Standards Code and CARB regulations. Construction equipment and operation equipment would be maintained to allow for continuous energy-efficient operations. The project would therefore not conflict with the City's Climate Action Plan (City of Escondido 2013a), and no impacts would occur.

VII. GEOLOGY AND SOILS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	■
ii. Strong seismic ground shaking?	☐	☐	■	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	■	☐
iv. Landslides?	☐	☐	☐	■
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	■	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	■	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☐	■

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	■
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	■	☐	☐

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42?

No Impact. Seismically induced surface or ground rupture occurs when movement on a fault deep within the earth breaks through to the surface as a result of seismic activity. Fault rupture almost always follows preexisting faults, which are zones of weakness. Sudden displacements are more damaging to structures because they are accompanied by shaking. Under the Alquist-Priolo Earthquake Fault Zoning Act, which was passed in 1972, the California State Geologist identifies areas in the State that are at risk from surface fault rupture. The A-P Act's main purpose is to prevent the construction of buildings used for human occupancy on the surface trace of active faults. That requires the State Geologist to establish regulatory zones, known as Alquist-Priolo Earthquake Fault Zones, around the surface traces of active faults and to issue appropriate maps that identify these zones.

The project site is not in the vicinity of an earthquake fault and is not affected by a state-designated Alquist Priolo Earthquake Fault Zone (City 2012). Therefore, project implementation would not expose people or structures to potential substantial adverse effects involving rupture of a known earthquake fault.

ii. Strong seismic ground shaking?

Less than Significant Impact. There are no known active faults that cross the project site, but there are several active faults that run throughout San Diego County. The active Rose Canyon fault is approximately 15.5 miles west of the project site. Additionally, the Elsinore fault is approximately 18 miles northeast of the project site. The project site is within a seismically active area and, therefore, can be subject to strong seismic ground motion. The project would comply with the seismic design parameters outlined in the California Building Code (CBC), which provide requirements for earthquake safety based on factors such as occupancy type, the types of soils onsite, and the probable strength of ground motion (City 2016). Compliance with construction and building safety standards would be required prior to building permit approval, which would reduce potential impacts associated with strong seismic ground shaking at the project site to less than significant.

iii. Seismic-related ground failure, including liquefaction?

Less than Significant Impact. According to the City of Escondido's General Plan EIR, the proposed project site would be located within a liquefaction hazard area (see Figure 4.6-3, City 2012). Therefore, the potential for liquefaction exists in the event of a large earthquake with a high acceleration of seismic shaking. Given this possibility, liquefiable soils would be taken into consideration during the design and construction of the proposed project. The project construction would comply with the latest standards of the CBC to assure safe construction. Compliance with the CBC would reduce adverse effects involving seismic-related ground failure, including liquefaction, to less than significant levels.

iv. Landslides?

No Impact. According to the City of Escondido's General Plan EIR, the project site is not located in an area with soils subject to potential landslides and is not located on land that slopes greater than 25 percent (City 2012). As such, there would be no impacts related to landslides.

b) Result in substantial soil erosion or the loss of topsoil?

Less than Significant Impact. Soil exposed by construction activities, such as excavation, could be subject to erosion if exposed to heavy rain, winds, or other storm events. Construction of the proposed project would involve a variety of heavy equipment associated with intensive earthwork, structural, and paving phases. The building foundations would be slabs on grade. Onsite soils displaced by grading could be used for fill, compacted to 90 percent of its maximum dry density. A SWPPP would be prepared in compliance with the Construction General Permit. The SWPPP would identify erosion control and sediment control BMPs that would be implemented to minimize the occurrence of soil erosion or loss of topsoil. Additionally, a large portion of the project area would be paved. Therefore, impacts related to soil erosion or the loss of topsoil would be less than significant.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Less than Significant Impact. The project site would not be located within an area that is subject to landslides, and so impacts related to landslides would not occur (City 2012). As stated in item VII.a.iii, the project area is located in a liquefaction hazard area, and so it could be subject to liquefaction and lateral spreading. However, impacts would not be significant because the proposed project would comply with the CBC building safety design standards. According to the Multijurisdictional Hazard Mitigation Plan (URS 2004), the underlying geologic formations in the entire County of San Diego, including the proposed project area, are mostly granitic and have a very low potential of subsidence. Therefore, the proposed project is not anticipated to have significant impacts associated with subsidence. The proposed project would not be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and any impacts related to landslide, lateral spreading, subsidence, liquefication, or collapse would be less than significant.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

No Impact. According to the City of Escondido's General Plan EIR, the project site is not located in an area with expansive soils, as defined in Table 18-1-B of the Uniform Building Code (1994; City 2012).

Therefore, there would not be substantial direct or indirect risks to life or property due to expansive soil. No impacts would occur.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. Septic tanks and alternative waste water disposal systems are not proposed as part of the project. Therefore, any impacts associated with the use of septic tanks or alternative waste water disposal systems would not occur.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less than Significant with Mitigation Incorporated. The project site is currently developed with one single-wide trailer used by a non-profit recycling group, one quadruple-wide trailer used for training by various City departments, and an asphalt paved parking lot. The remainder of the site is used by the City DPW for storage and heavy equipment training, except for a location on the west side that is used by EDCO, a waste disposal corporation, for the storage of empty roll-off bins. The remainder of the sites consist of previously-established roadways. As such, the site is heavily disturbed, substantially minimizing the potential for a unique paleontological resource or unique geologic feature to be located on the site. Furthermore, the site has not been identified has containing unique paleontological or geologic resources during previous development. However, any amount of ground disturbance within the project site has the potential to impact unknown and undiscovered paleontological resources. The City of Escondido and the general project area are not known to have produced any significant or substantial paleontological discoveries. Additionally, previous grading/ground disturbance around the project area did not uncover paleontological resources. Therefore, the potential for discovery of unknown fossils during project related ground disturbance activities is considered relatively low to negligible based on ground disturbance in the area. Mitigation Measure GEO-1 would ensure the protection and proper handling of paleontological resources, should any unexpected resource be uncovered during ground disturbance activities.

Mitigation

GEO-1 In the event of unanticipated discovery of paleontological resources, the City shall cease ground-disturbing activities within 100 feet of the find until it can be assessed by a qualified paleontologist. The qualified paleontologist shall assess the find, implement recovery measures if necessary, and determine if paleontological monitoring is warranted once work resumes.

VIII. GREENHOUSE GAS EMISSIONS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	■	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	■	☐

The discussion below is based on the Air Quality and Greenhouse Gas Emissions Technical Report prepared by HELIX Environmental Planning, Inc. (HELIX 2020a), attached to this Initial Study as Appendix A.

a) Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than Significant Impact. GHGs are emitted by natural processes and human activities primarily associated with: (1) the burning of fossil fuels during motorized transport, electricity generation, natural gas consumption, industrial activity, manufacturing, and other activities; (2) deforestation; (3) agricultural activity; and (4) solid waste decomposition. Emissions of GHGs in excess of natural ambient concentrations are thought to be responsible for the enhancement of the greenhouse effect and contributing to what is termed "global warming," the trend of warming of the Earth's climate from anthropogenic activities. Global climate change impacts are by nature cumulative; direct impacts cannot be evaluated because the impacts themselves are global rather than localized impacts.

The GHGs defined under California's AB 32 include carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). As individual GHGs have varying heat-trapping properties and atmospheric lifetimes, GHG emissions are converted to carbon dioxide equivalent (CO_2e) units for comparison. The CO_2e is a consistent methodology for comparing GHG emissions because it normalizes various GHG emissions to a consistent measure.

The City of Escondido Municipal Code Chapter 33, Article 47, Section 33-924, *Coordination of CEQA, quality of life standards, and growth management provisions*, has established that projects that do not generate more than 2,500 metric tons (MT) CO_2e per year would have GHG emissions that would not be considered significant. Projects which generate more than 2,500 MT CO_2e per year would either require an analysis of the reduction measures outlined in the Escondido Climate Action Plan (CAP) screening table and an achievement of 100 points, or a reduction in the project's GHG emissions below the 2,500 MT CO_2e per year threshold through mitigation and/or project design features (City 2019; City 2013b).

The City's GHG threshold established in the municipal code and the CAP was developed to meet the year 2020 statewide GHG emissions targets as mandated by AB 32 and implemented by the CARB Scoping Plan. The City has not adopted guidance or revised thresholds to account for GHG reduction targets beyond 2020. Accordingly, a threshold reduced by 4.98 percent for each year between 2020 and 2030 would meet the mandates of SB 32. The first full year of operation for the project is anticipated to be 2023. Therefore, a threshold 14.21 percent below the City's threshold of 2,500 MT CO_2e per year (or 2,145 MT CO_2e per year) is used in this analysis for the determination of significance.

The project would result in emissions of GHGs during both construction and operation. GHG emissions resulting from project construction and operation are analyzed below.

Construction Emissions

Construction sources of GHG emissions include heavy construction equipment, worker vehicle miles traveled, and water use. The project's construction GHG emissions were estimated using CalEEMod Version 2016.3.2 and are shown in Table 6, *Construction GHG Emissions*. Emissions of GHGs related to the construction of the project would be temporary, and the total estimated GHG emissions associated with construction of the project would be 881.6 MT CO_2e. To be conservative in accounting for all project sources of GHG emissions, the construction period GHG emissions were amortized (i.e., averaged) over 30 years to be added to operational emissions. Averaged over 30 years, the proposed construction activities would contribute approximately 29.4 MT CO_2e emissions per year.

Table 6
CONSTRUCTION GHG EMISSIONS

Year	Emissions (MT CO_2e)
2020	234.2
2021	466.8
2022	180.6
Total[1]	**881.6**
Amortized Construction Emissions[2]	*29.4*

Source: CalEEMod (output data is provided in Appendix A).
[1] Totals may not sum due to rounding.
[2] Construction emissions are amortized over 30 years.
MT = metric ton; CO_2e = carbon dioxide equivalent

Operational Emissions

During operations, area and indirect emissions sources associated with the proposed project would primarily result from energy sources, including the use of natural gas and electricity. The project's operational GHG emissions were estimated using CalEEMod Version 2016.3.2 and are shown in Table 7, *Operational GHG Emissions*. As shown in Table 7, the total estimated GHG emissions associated with operation of the project would be 606.2 MT CO_2e. As stated above, the construction period GHG emissions were amortized over 30 years to be added to operational emissions. Averaged over 30 years, the proposed construction activities would contribute approximately 29.4 MT CO_2e emissions per year. Combined with operational emissions, there would be a total of 635.6 MT CO_2e emissions per year.

Table 7
OPERATIONAL GHG EMISSIONS

Emission Sources	Emissions (MT CO_2e)
	2021
Area	<0.1
Energy	582.5
Mobile	8.3
Stationary Sources	11.0
Solid Waste	3.0
Water and Wastewater	1.4
Operational Subtotal	**606.2**
Construction (Annualized over 30 years)	*29.4*
Total Operational Emissions	**635.6**
Adjusted (2023) Screening Threshold	*2,145.0*
Exceed Threshold?	***No***

Source: CalEEMod (output data is provided in Appendix A)
Note: Totals may not sum due to rounding
MT = metric ton; CO_2e = carbon dioxide equivalent

The total yearly GHG emissions for the project would total approximately 635.6 MT CO_2e, which is well below the adjusted 2023 threshold of 2,145 MT CO_2e per year. Therefore, the proposed project would not generate excessive GHG emissions, and impacts would be less than significant.

b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less than Significant Impact. There are numerous State plans, policies, and regulations adopted for the purpose of reducing GHG emissions. The principal overall State plan and policy is AB 32 and Senate Bill (SB) 32, the California Global Warming Solutions Act of 2006. The quantitative goal of AB 32 is to reduce GHG emissions to 1990 levels by 2020. SB 32 would require further reductions of 40 percent below 1990 levels by 2030. Statewide plans and regulations such as GHG emissions standards for vehicles (AB 1493), the Low Carbon Fuel Standard (LCFS), and regulations requiring an increasing proportion of electricity to be generated from renewable sources are being implemented at the statewide level; as such, compliance at the project level is not addressed. Therefore, the proposed project does not conflict with those plans and regulations.

As stated above, the increase in GHG emissions would be less than the City's significance threshold being applied to this analysis. In addition, by providing high-quality recycled water for agricultural uses, the project would reduce the use of potable water or pumped ground water for irrigation, consistent with the City's CAP GHG emissions reduction programs R2-W2, Water Conservation Strategies, and R2-W3, Increased Recycled Water Use (City 2013a). Therefore, the proposed project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. Impacts would be less than significant.

IX. HAZARDS AND HAZARDOUS MATERIALS

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	■	☐
b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	■	☐
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	■	☐
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	■	☐	☐
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	■
f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	■	☐
g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	■	☐

Background

A Phase I Environmental Site Assessment (ESA) was completed by Ninyo & Moore to evaluate any potentially hazardous conditions at the project site that could impact the project, public, or environment. As stated by the ASTM International (ASTM) Standard Practice for ESAs on Commercial Real Estate E1527-13, the purpose of the Phase I ESA is to identify recognized environmental conditions (RECs), which are defined as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions." There are three categories of RECs: existing RECs (as defined above), Historical RECs (HRECs), or Controlled RECs (CRECs). An HREC is defined as "a past release of any hazardous substances or petroleum products

that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls." An HREC is an environmental condition that was recognized in the past but may or may not still be recognized as a current environmental condition. A CREC is defined as a "recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls." A CREC is an active environmental concern because while the hazardous substances have been corrected to meet certain regulatory levels, the contaminants still remain and have the potential to be above regulatory levels for some types of development.

The data within the Phase I ESA was collected through the performance of a site reconnaissance; a review of the physical setting and background information; a review of federal, state, tribal, and local regulatory agency databases for the site and for properties located within a specified radius of the site; a review of local regulatory agency files for the site; a review of historical information for the site, such as aerial photographs, historical topographic maps, reverse street directories, Sanborn fire insurance maps, and building department records; a review of user-provided information; an interview with the property owner representative regarding the environmental status of the site; and the performance of a preliminary vapor encroachment screen to evaluate the potential for vapor encroachment conditions. All findings, opinions, and conclusions are summarized in the Phase I ESA, which can be found in Appendix E.

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact. Construction activities associated with the proposed project would require transportation and use of limited quantities of fuel, oil, sealants, and other hazardous materials related to construction. The use of hazardous materials and substances during construction would be subject to federal, state, and local health and safety requirements for handling, storage, and disposal. As a result, hazardous material impacts related to construction activities would be less than significant.

Operation of the proposed facilities would include the storage and use of sodium hypochlorite, liquid ammonium sulfate, sulfuric acid, sodium bisulfite, antiscalant, and sodium hydroxide. Chemicals would be supplied in bulk storage tanks and totes. Chemical storage and feed systems would be located inside the chemical storage area and provided with separate containment areas for incompatible chemicals as specified by the 2012 International Fire Code (IFC). The chemical storage area includes secondary containment, sprinklers, and ventilation for all chemicals. All chemical feed piping would be double-walled chemical piping. A pipe trench would run between the chemical storage area and the Process Building for chemical piping. The pipe trench would slope back toward the chemical storage area for additional containment in case of an emergency pipe break. A chemical sump would be placed at each chemical delivery connection adjacent to the chemical area. In the event of a leak during filling, the chemical sump would capture any chemical spill. Adjacent paving would slope toward the chemical sump. No potential exists for off-site runoff nor is there any connection to the local sewer. Chemical sumps and containment areas would be maintained by operations staff. Other waste streams such as liquid collected in the sumps, if determined to be hazardous, would be pumped using a portable pump to a tank truck to be disposed of as a hazardous material at a State-permitted treatment or disposal

facility. The delivery and disposal of chemicals to and from the project site would occur in full accordance with all applicable federal, state, and local regulations.

Three of the chemicals are categorized as health hazard – corrosive, meaning that contact with these chemicals could cause irritation of the skin if exposure is prolonged. Washing the exposed area with large amounts of water would deter any skin irritation. Sulfuric acid is categorized as Physical hazard – Class 2 water reactive, meaning that it exothermically reacts with water and produces heat. For this reason, sulfuric acid would be stored separately from all other chemicals in an isolated room. None of the chemicals are classified as flammable or explosive.

A Hazardous Materials Business Plan (HMBP) must be prepared for the proposed project as required by the County of San Diego Department of Environmental Health. The HMBP is intended to minimize hazards to human health and the environment from fires, explosions, or an unplanned release of hazardous substances into air, soil, or surface water (City 2012). Compliance with all applicable federal, state and local regulations regarding the use and transport of hazardous materials, and implementation of the HMBP, potential impacts to the public or the environment related to the transport, use, or disposal of hazardous materials would be less than significant.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less than Significant Impact. As discussed above in item IX.a, limited quantities of hazardous materials such as gasoline, diesel, oils, and lubricants may be required to operate the construction equipment. Construction activities would be short-term, and the use of these materials would cease once construction is complete. The hazardous substances used during construction would be required to comply with existing federal, state and local regulations regarding the use and disposal of these materials. In the event of an accidental release during construction containment and clean up would be in accordance with existing applicable regulatory requirements.

Project operation would include the transport and use of hazardous materials onsite. A HMBP must be prepared for the proposed project as required by the County of San Diego Department of Environmental Health. The HMBP is intended to minimize hazards to human health and the environment from fires, explosions, or an unplanned release of hazardous substances into air, soil, or surface water (City 2012). A water-based fire sprinkler system would be provided in the chemical storage areas of the Chemical Building, and in other buildings and areas as required by local fire code. The fire sprinkler system would consist of the required valves, fire department connection, and sprinkler piping. The fire sprinkler system will be designed according to the requirements of National Fire Prevention Association (NFPA). A continuous ventilation system would be provided for the chemical storage areas of the Chemical Building as required by the local fire code. The ventilation system would consist of a heated ventilation supply unit, exhaust fans, and ductwork. The ductwork would be arranged to provide good airflow in all portions of the chemical storage areas. Compliance with all applicable federal, state and local regulations regarding the use and transport of hazardous materials, and the implementation of the HMBP, potential impacts to the public or the environment related to reasonably foreseeable accident conditions related to hazardous materials would be less than significant.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less than Significant Impact. The proposed site for the MFRO Facility is not located within one-quarter mile of an existing or proposed school. The nearest school is the Del Dios Middle School, which is approximately 0.68 miles southwest of the site. Classical Academy High School is located approximately 0.86 miles east of the site. The Classical Academy High School would, however, be located within one-quarter mile of construction completed for the site because it is located approximately 0.2 mile south of the pipeline work proposed at West Washington Avenue and Waverly Place. As stated above, construction activities would adhere by appropriate regulations, minimizing impacts related to hazardous emissions or materials. As such, impacts would be less than significant.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less than Significant with Mitigation Incorporated. The Department of Toxic Substances Control (DTSC) EnviroStor database was used to evaluate the project site, and neither the project site nor properties within 1,000 feet are listed within it. The SWRCB GeoTracker database was also used to evaluate the project site. Geotracker's Leaking Underground Fuel Tank Report was used to determine if there were any leaking underground storage tanks (LUST) on the project site. The project area was not identified as having a LUST on-site, but there were four of potential concern present within 0.5 miles of the site. These are located at Palomar Transit Mix, which is adjacent to the east side of the project site; Pacific Bell, 100 feet north of the project site; Escondido Disposal, west of the project site; and at City DPW, 300 feet southeast of the project site. However, all of the cases for these LUST sites are currently closed and no further assessment is needed. As a result, any impacts from the four LUST sites of potential concern nearby are less than significant.

The SWRCB GeoTracker database also disclosed that there are two closed unauthorized release (UAR) cases associated with the site. In 1990/1991 UAR was associated with the discovery of shallow total petroleum hydrocarbon (TPH) impacted soils in an unlined drainage ditch. Approximately 70 cubic yards of soil were excavated, and the case was closed. An assessment was performed in 2010 for future site development, and TPH-impacted soil and methyl tertiary-butyl ether (MTBE) and tetrachloroethylene (PCE) impacted groundwater were identified on the site. A second assessment was performed in 2012 to delineate the dissolved MTBE plume. The shallow TPH-impacted soil was concluded to be limited and the MTBE plume delineated to the northwest portion of the site. The PCE concentrations were identified as a regional impact, and arsenic concentrations in soil and metals concentrations were noted to be background levels. The County of San Diego Department of Environmental Health (DEH) provided a case closure letter in 2016, with contamination left in place. The TPH-impacted soil, dissolved MTBE, PCE, and metals concentrations are considered CRECs for the site, and are therefore an active environmental concern. As such, mitigation is required to reduce the potential impact. Impacts are considered less than significant with mitigation incorporated.

Mitigation

HAZ-1 **Soil and Groundwater Construction Management Plan**. A soil and groundwater management plan (SGWMP) shall be prepared prior to project construction to minimize exposure in the event that adverse environmental conditions are encountered during soil and groundwater

disturbance activities. The plan shall include, but not be limited to, observation and monitoring activities in areas with known potential soil contamination (CREC) and any areas where contaminated or potentially contaminated soil or groundwater are encountered; community health and safety practices; roles and responsibilities of the contractor; and handling, sampling, transportation, and disposal, as applicable, of contaminated or potentially contaminated soil and/or groundwater.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The proposed project is not located within an airport land use plan or within two miles of a public airport or public use airport. The nearest public airport is the Ramona Airport that is located approximately 12 miles to the southeast from the project site. No impact would occur.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact. Access to the project area would be from a private driveway off of West Washington Avenue. Project-related traffic would be minimal and would not cause a significant increase in congestion. During construction of the project, heavy construction vehicles could interfere with emergency response to the site or emergency evacuation procedures in the event of an emergency (e.g., vehicles traveling behind the slow-moving truck). In addition, construction associated with the pipeline installation and/or driveway improvements would result in segments of West Washington Avenue being narrowed for through traffic. West Washington Avenue is designated as part of the City's Emergency Evacuation Route (City 2012). As described in Section 2.5.4 of this Initial Study, a Traffic Control Plan would be prepared as part of the project, which includes strategies to maintain two-way traffic flow on West Washington Avenue, would ensure that access for emergency vehicles would be maintained at all times. There is also an existing emergency exit/entrance off of West Washington Avenue that would be maintained and used as necessary for emergency vehicles only. As a result, the project's construction-related impacts would be less than significant. Operation of the proposed project would involve minimal and infrequent traffic in and out of the project site and would not result in interference with emergency response access. The impacts related to the operation of the project would be less than significant.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less than Significant Impact. According to the California Department of Forestry and Fire Protection's Fire Hazard Severity Zone (FHSZ) maps, the proposed project is not located within high nor very high fire hazard severity zones (California Department of Forestry and Fire Protection [CAL FIRE] 2007). The project site is located in an urbanized environment. There are no wildlands or open spaces immediately adjacent to the project site, which significantly reduces the risk of wildland fire damage to people and structures in the area. The proposed project would adhere to the City's Fire Code, along with the 2013 California Fire Code, and the County of San Diego Fire Code. Plans for the project would be approved by the City Fire Marshal prior to construction to ensure compliance with applicable codes. Therefore, the proposed project is not anticipated to expose people or structures to wildland fires, and impacts would be less than significant.

X. HYDROLOGY AND WATER QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	■	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	■
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site?	☐	☐	■	☐
ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off- site?	☐	☐	■	☐
iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional resources of polluted runoff?	☐	☐	■	☐
iv. Impede or redirect flood flows?	☐	☐	■	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	■	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	■

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less than Significant Impact. The proposed project would not violate any water quality standards or waste discharge requirements. The proposed project includes the construction of a recycled water treatment facility to provide process water for agricultural activities. Soil exposed by construction activities including excavation could be subject to erosion if exposed to heavy rain, winds, or other storm events. Construction of the proposed project would involve a variety of heavy equipment associated with intensive earthwork, structural and paving phases. The maximum depth for excavation for the buildings on the site would be approximately 10 feet deep and up to approximately 8.5 feet would be excavated for pipeline construction. Onsite soils displaced by grading could be used for fill, compacted to 90 percent of its maximum dry density. A SWPPP would be prepared in compliance with

the Construction General Permit. The SWPPP would identify erosion control and sediment control BMPs that would be implemented to minimize the occurrence of soil erosion or loss of topsoil. Therefore, no impacts related to water quality would occur; and impacts would be less than significant.

The project is a Priority Development Project (PDP) and, therefore, must prepare a SWQMP. The PDP SWQMP would implement construction and post-construction BMPs in compliance with the City and Regional Water Quality Control Board (RWQCB) regulations such as low-impact development (LID) design practices which include source control, bioretention basins, and hydromodification designs. Implementation of these LID BMPs under the PDP SWQMP would preclude any potential violations of applicable standards and discharge violations.

The SWRCB adopted General Order WQ 2014-0090-DWQ on June 3, 2014 to streamline permitting for recycled water use. Recycled water is often an underutilized resource, and the General Order allows the use of tertiary disinfected, secondary disinfected, and in some cases secondary undisinfected recycled municipal wastewater for title 22 approved non-potable uses such as agricultural irrigation, landscape irrigation, dust control, and cooling tower make-up water. Recycled water use for irrigation is limited to agronomic application rates; therefore, the amount of recycled water that could potentially reach groundwater will be limited.

The Order is consistent with the Recycled Water Policy adopted by the State Water Board in 2009. Coverage under the General Order is limited to treated municipal wastewater for non-potable uses. It does not apply to the use of recycled water for groundwater recharge, or the disposal of treated wastewater by means of percolation ponds. To obtain coverage under the Order, the City would be required to submit a Notice of Intent and an application fee to the San Diego Regional Water Quality Control Board. The operation phase of the proposed project would comply with the above identified NPDES Permit requirements to protect water quality during operation. Therefore, no substantial adverse impacts to water quality would occur; therefore, impacts would be less than significant.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

No Impact. The proposed project would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge. The proposed project includes construction of a recycled water treatment facility to provide water for agricultural activities and would not result in any increased use or extraction of local groundwater. In fact, the proposed project would have a positive impact to the groundwater table, because the recycled water would off-set existing potable water uses which do include groundwaters. The recycled water would be stored in the proposed tank and distributed to local farmers nearby for agricultural use. No adverse impact to groundwater supplies would occur.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

    i. Result in substantial erosion or siltation on- or off-site?

Less than Significant Impact. As stated above in item X.a, a SWPPP would be prepared in compliance with the Construction General Permit, which would identify erosion control and sediment control BMPs that would be implemented to minimize the occurrence of soil erosion or siltation. Additionally, a PDP SWQMP would be implemented to establish construction and post-construction BMPs in compliance

with the City and RWQCB regulations, such as source control, bioretention basins, and hydromodification designs. Through the implementation of the BMPs outlined in the SWPPP and PDP SWQMP, the proposed project would not result in substantial erosion or siltation on- or off-site. Impacts would be less than significant.

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

Less than Significant Impact. As stated above in item X.a, both a SWPPP and a PDP SWQMP would be implemented for the proposed project. Each would establish BMPs that would minimize impacts to existing drainage patterns of the area in a manner which would substantially increase the rate or amount of surface runoff, which would result in flooding on- or off-site. The bioretention basins and hydromodification designs listed as LID design practices would decease surface runoff velocities, reducing the chances of flooding on- or off-site. Therefore, impacts would be less than significant.

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional resources of polluted runoff?

Less than Significant Impact. As stated above in item X.a, both a SWPPP and a PDP SWQMP would be implemented for the proposed project. Each would establish BMPs that would minimize impacts to existing drainage patterns of the area in a manner which would create or contribute runoff water exceeding the capacity of existing or planned stormwater drainage systems or provide substantial additional resources of polluted runoff. Through the implementation of these BMPs, impacts would be less than significant.

iv. Impede or redirect flood flows?

Less than Significant Impact. Lake Wohlford and Dixon Lake are located approximately 5.3 miles and 3 miles, respectively, northeast of the project site. If either dam were to fail, portions of Escondido Creek, which runs to the north of the project site, would experience substantial flooding. These dams, however, are highly regulated and inspected regularly, and are identified as having a low failure risk by the County of San Diego Multi-Jurisdictional Hazard Mitigation Plan (County 2018). The project would be consistent with the General Plan, which zones the project area for industrial development, and would implement the Dixon Lake and Lake Wohlford Dam Emergency Action Plans should a dam failure occur. The project would not impede or redirect flood flows, and impacts would be less than significant.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Less than Significant Impact. Tsunamis are usually caused by displacement of the ocean flood causing large waves and are typically generated by seismic activity. The proposed project is located approximately 13 miles from the Pacific Ocean; therefore, a tsunami hazard is not present for the project site. A seiche is a standing wave in an enclosed or partly enclosed body of water. Seiches are normally caused by earthquake activity, and can affect harbors, bays, lakes, rivers, and canals. The nearest body of water, Dixon Lake, is approximately 3 miles away, which is too far to present impacts by a seiche event. Lastly, mudflow is a mixture of soil and water that runs like a river of mud down a hillside and is usually generated by heavy rainfall. The proposed project is located within a developed commercial and industrial area and would not be exposed to mudflow from nearby slopes. Impacts relating to tsunamis, seiches, or mudflow would be less than significant.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

No Impact. As stated above in item X.a, both a SWPPP and a PDP SWQMP would be implemented for the proposed project. Additionally, the project would comply with all storm water quality standards during construction and operation. Adhering to the BMPs and all storm water quality standards would minimize any potential negative impacts associated with hydrology and water quality. Implementation of the proposed project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. There would be no impact.

XI. LAND USE AND PLANNING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Physically divide an established community?	☐	☐	☐	■
b) Cause significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	■

a) Physically divide an established community?

No Impact. The physical division of an established community typically refers to the construction of a linear feature, such as an interstate highway or railroad tracks, or removal of a means of access, such as a local road or bridge that would impact mobility within an existing community or between a community and outlying area. The project site is within an urban area developed with primarily commercial and industrial uses. The proposed project consists of construction of a MFRO facility, which would not divide the existing community, as the project site is currently occupied with two trailers, a metal storage building, and an asphalt paved parking lot. No changes to land uses would occur with the proposed project, and the proposed project would not permanently change roadways or areas outside of the project site. All work completed on roadways would be restored to existing conditions following completion of the project. Thus, the proposed project would not physically divide an established community and no impacts would occur.

b) Cause significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact. The project site has a land use designation of General Industrial and is zoned as General Industrial (M-2; City 2012). The surrounding areas are designated as General Industrial and Light Industrial. The project proposes a MFRO water treatment facility, which does not conflict with the General Industrial land use designation, nor the General Industrial zoning. Implementation of the proposed project would not cause significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Impacts would not occur.

XII. MINERAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	■
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	■

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. According the General Plan EIR, no existing or past mineral extraction facilities are located on the project site (City 2012). The site has not been associated with mineral mining, and therefore, no impacts to the loss of a known mineral resource or locally-important mineral resource recovery site would occur.

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

No Impact. As stated above in item XII.a, the project area is not used for mineral extraction and is not known as a locally important mineral resource recovery site. Further, the project area is not delineated on any plan for mineral resource recovery uses. As such, no impacts would occur.

XIII. NOISE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	■	☐	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	■	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	■

Noise is generally defined as unwanted sound. Sound, traveling in the form of waves from a source, exerts a sound pressure level (referred to as sound level) that is measured in decibels (dB), which is the standard unit of sound amplitude measurement. The dB scale is a logarithmic scale that describes the physical intensity of the pressure vibrations that make up any sound, with 0 dB corresponding roughly to the threshold of human hearing and 120 to 140 dB corresponding to the threshold of pain. Pressure waves traveling through air exert a force registered by the human ear as sound.

Sound pressure fluctuations can be measured in units of hertz (Hz), which correspond to the frequency of a particular sound. Typically, sound does not consist of a single frequency, but rather a broad band of frequencies varying in levels of magnitude. When all the audible frequencies of a sound are measured, a sound spectrum is plotted consisting of a range of frequency spanning 20 to 20,000 Hz. The sound pressure level, therefore, constitutes the additive force exerted by a sound corresponding to the sound frequency/sound power level spectrum. The typical human ear is not equally sensitive to all frequencies of the audible sound spectrum.

As a consequence, when assessing potential noise impacts, sound is measured using an electronic filter that deemphasizes the frequencies below 1,000 Hz and above 5,000 Hz in a manner corresponding to the human ear's decreased sensitivity to extremely low and extremely high frequencies. This method of frequency weighting is referred to as A-weighting and is expressed in units of A-weighted decibels (dBA). A-weighting follows an international standard methodology of frequency deemphasis and is typically applied to community noise measurements.

An individual's noise exposure is a measure of noise over a period of time. While a noise level is a measure of noise at a given instant in time, community noise varies continuously over a period of time with respect to the contributing sound sources of the community noise environment. Community noise is primarily the product of many distant noise sources, which constitute a relatively stable background noise exposure, with the individual contributors unidentifiable. The background noise level changes throughout a typical day, but does so gradually, corresponding with the addition and subtraction of distant noise sources such as traffic. What makes community noise variable throughout a day, besides the slowly changing background noise, is the addition of short-duration, single-event noise sources (e.g., aircraft flyovers, motor vehicles, sirens), which re readily identifiable to the individual.

These successive additions of sound to the community noise environment change the community noise level from instant to instant, requiring the measurement of noise exposure over a period of time to legitimately characterize a community noise environment and evaluate cumulative noise impacts. This

time-varying characteristic of environmental noise is described using statistical noise descriptors. The most frequently used noise descriptors are summarized below:

L_{EQ}: The L_{EQ}, or equivalent sound level, is used to describe noise over a specified period of time in terms of a single numerical value; the L_{EQ} of a time-varying signal and that of a steady signal are the same if they deliver the same acoustic energy over a given time. The L_{EQ} may also be referred to as the average sound level.

L_{MAX}: The maximum, instantaneous noise level experienced during a given period of time.

L_{MIN}: The minimum, instantaneous noise level experienced during a given period of time.

L_{DN}: Also termed the DNL, the L_{DN} is the average A-weighted noise level during a 24-hour day, obtained after an addition of 10 dBA to measured noise levels between the hours of 10:00 p.m. to 7:00 a.m. to account nighttime noise sensitivity.

CNEL: CNEL, or Community Noise Equivalent Level, is the average A-weighted noise level during a 24-hour day that is obtained after an addition of 5 dBA to measured noise levels between the hours of 7:00 p.m. to 10:00 p.m. and after an addition of 10 dBA to noise levels between the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively.

An important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted (i.e., comparison to the ambient noise environment). In general, the more a new noise level exceeds the previously existing ambient noise level, the less acceptable the new noise level will be judged by those hearing it. Outside of the laboratory, a 3 dBA change in noise levels is considered to be a barely perceivable difference. A change in noise levels of 5 dBA is considered to be readily perceivable, and a change of 10 dBA is subjectively heard as doubling of the perceived loudness.

These relationships occur in part because of the logarithmic nature of sound and the decibel system. The human ear perceives sound in a non-linear fashion, hence the decibel scale was developed. Because the decibel scale is based on logarithms, two noise sources do not combine in a simple additive fashion, but rather logarithmically. For example, if two identical noise sources produce noise levels of 50 dBA, the combined sound level would be 53 dBA, not 100 dBA.

Noise levels from a particular source generally decline as distance to the receptor increases. Other factors, such as the weather and reflecting or barriers, also help intensify or reduce the noise level at any given location. A commonly used rule of thumb for roadway noise is that for every doubling of distance from the source, the noise level is reduced by about 3 dBA at acoustically “hard” locations (i.e., the area between the noise source and the receptor is nearly complete asphalt, concrete, hard-packed soil, or other solid materials) and 4.5 dBA at acoustically “soft” locations (i.e., the area between the source and receptor is normal earth or has vegetation, including grass). Noise from stationary or point sources is reduced by about 6 to 7.5 dBA for every doubling of distance at acoustically hard and soft locations, respectively. Noise levels may also be reduced by intervening structures – generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA.

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less than Significant Impact with Mitigation Incorporated. The proposed project would generate noise levels during project construction and operations as discussed below

Construction

Section 17-234 of the City's Municipal Code stipulates that the operation of construction equipment at any construction site is only allowed from Monday through Friday between the hours of 7:00 a.m. and 6:00 p.m., and on Saturdays between the hours of 9:00 a.m. and 5:00 p.m. No construction activities are allowed on Sundays and public holidays. In addition, construction equipment or a combination of equipment are not allowed to operate to cause noise in excess of a one-hour average sound level limit of 75 dBA at any time, unless a variance has been obtained in advance from the City Manager. With respect to grading activities, Section 17-238 of the City's Municipal Code also limits such activities to Monday through Friday between the hours of 7:00 a.m. and 6:00 p.m. and, provided a variance has been obtained in advance from the City Manager, on Saturdays from 10:00 a.m. to 5:00 p.m. Lastly, Section 17-240(b)(12) of the City's Municipal Code prohibits the operation of any pile driver, pneumatic hammer, derrick, or other similar appliance between the hours of 6:00 p.m. and 7:00 a.m. on weekdays, or on Saturdays, Sundays, or any legal holidays unless a variance has been obtained in advance from the City Manager.

Table 8, *Construction Equipment Reference Noise Levels*, shows the maximum (L_{MAX}) reference noise levels produced by various types of construction equipment based on a distance of 50 feet. It should be noted that L_{MAX} noise levels associated with the construction equipment would only be generated when the equipment operates at full power. Typically, the operating cycle for a piece of construction equipment would involve one or two minutes of full power operation followed by three or four minutes at lower power settings. As such, the L_{MAX} noise levels shown in Table 8 would only occur occasionally throughout the construction day.

Table 8
CONSTRUCTION EQUIPMENT REFERENCE NOISE LEVELS

Construction Equipment	Noise Level (dBA) at 50 feet (L_{MAX})
Air Compressor	77.7
Backhoe	77.6
Compactor (Ground)	83.2
Concrete Mixer Truck	78.8
Concrete Saw	89.6
Crane	80.6
Drill Rig Truck	79
Dump Truck	76.5
Excavator	80.7
Forklift	75
Generator	80.6
Grader	85
Paver	77.2
Paving Equipment	90
Pumps	80.9
Roller	80
Rubber Tired Loader	79.1
Skid Steer Loader 8	0
Surface Equipment 8	5

Source: FHWA, 2006
dBA = A-weighted decibel; L_{MAX} = maximum reference noise level

The project's construction activities are scheduled to occur between 7:00 a.m. to 4:30 p.m. Monday through Friday, which would be in compliance with the City's permitted construction hours. Although the project's construction hours would comply with the construction noise regulations in the City's Municipal Code, the nearby land uses surrounding the project still would be subject to increased noise levels in their existing noise environment. During project construction, nearby noise-sensitive land uses (NSLUs) that would be exposed to increased noise levels would be the existing residential uses located north and south of the pipeline alignment. These include a motel at 528 West Washington Avenue, located 50 feet from the pipeline construction and 0.3 mile from the MFRO facility; a hotel at 422 West Washington Avenue, located 50 feet from the pipeline construction and 0.4 mile from the MFRO facility; an apartment building at 439 West Washington Avenue, located 60 feet from the pipeline construction and 0.4 mile from the MFRO facility; and multi-family residences 220 feet from the Waverly Place pipeline connection and 0.7 mile from the MFRO facility.

Due to the proximity of NSLUs to the pipeline alignment, the proposed project's construction activities may expose these sensitive receptors to increased exterior noise levels. Construction of the pipeline would involve trenching, installing the new pipeline, backfilling, and repaving affected portions of the street and private properties. Over the course of a construction day, the highest noise levels would be generated due to excavation within the street ROW. The loudest activities associated with pipeline construction would be from a concrete saw cutting existing pavement and from an excavator digging the trench for the new pipeline.

Construction activities are conservatively analyzed to occur as close as 50 feet to adjacent residential properties along West Washington Avenue. At this distance, a concrete saw may temporarily generate

noise levels of 82.6 dBA L_{EQ}. An excavator may generate noise levels of 78.7 dBA L_{EQ} at 50 feet. Noise levels from pipeline trenching activity may therefore exceed the City's applicable hourly noise standard of 75 dBA L_{EQ} at nearby NSLUs along West Washington Avenue. Minimizing the use of these pieces of equipment in close proximity to the neighboring land uses would enable the construction activities to maintain levels below 75 dBA L_{EQ}. Implementation of Mitigation Measure NOI-1 would restrict the use of equipment and reduce overall construction-related noise levels to below 75 dBA L_{EQ}.

NOI-1 Construction Equipment Noise Reduction. Noise levels from project-related construction equipment shall not exceed 75 dBA L_{EQ} (one hour). To reduce noise levels, the following measures shall be implemented:

- All construction equipment operating at the project site shall be equipped with properly operating mufflers.
- Noise and groundborne vibration construction activities whose specific location on the project site may be flexible (e.g., operation of compressors and generators, cement mixing, general truck idling) shall be conducted as far as possible from the nearest noise- and vibration-sensitive land uses east of the project site.
- When the use of impact tools is necessary, they shall be hydraulically or electrically powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically powered tools. Where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used and external jackets on the tools themselves shall be used where feasible.
- All stationary construction noise sources used at the project site shall be located away from adjacent receptors, to the extent feasible, and be muffled and enclosed within temporary sheds or other insulation barriers to the extent feasible.
- A construction relations officer shall be designated for the proposed project to serve as a liaison with surrounding residents and property owners and be responsible for responding to any concerns regarding construction noise and vibration. The liaison's telephone number(s) shall be prominently displayed at the project site. Signs shall also be posted that include permitted construction days and hours at the project site.

Operations

The City establishes exterior sound level limits for different land uses in Section 17-229 of the Municipal Code. These sound level limits are the allowable noise levels at any point on or beyond the boundaries of the property on which the sound is produced. The project site and surrounding parcels are zoned as General Industrial, with an applicable 75 dBA L_{EQ} (one hour) sound level limit.

During project operations, noise sources at the project site would consist primarily of the numerous onsite electric pumps and fans associated with the MFRO Facility. However, all of the MFRO equipment, including the pumps, would be housed inside of buildings. Additionally, as part of the proposed project, all pumping equipment would generally be placed towards the interior of the project. Furthermore, all process, pumping, and chemical feed and storage equipment would be located inside of the buildings. The project would provide an emergency engine generator to provide standby power in case of loss of power during operations. The generator would also be tested on a monthly basis during daytime hours.

The engine generator would be enclosed to reduce noise levels at the project boundaries. As noted in Section 2.4.17 of this Initial Study, the process, pumping, chemical feed equipment, and generator would be located inside of the buildings or enclosures and will be designed to meet the City's noise level limits at the property boundary. Thus, the operational noise levels generated by the proposed project are not anticipated to adversely affect the neighboring noise-sensitive land uses, and impacts would be less than significant.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Less than Significant Impact. The primary potential for generation of groundborne vibration would occur during project construction. Per Federal Transit Administration vibration levels provided in the General Plan FEIR, an impact would occur if construction would generate vibration levels greater than 65 vibration decibels (VdB) at buildings where vibration could interfere with interior operations, 80 VdB at the nearest residence or building where people sleep, or 83 VdB at the nearest institutional land use with primarily daytime uses. No uses such as medical offices, research and development facilities, or industrial land uses where vibration could interfere with interior operations are located in proximity to the project. The nearest building where people sleep are the residences described in XIII.a, located adjacent to the pipeline alignment.

A vibratory roller would be expected to create the highest vibration levels during fill compaction prior to repaving the roadway above the pipeline alignment. Table 4.12-9 of the City General Plan FEIR provides vibration source levels for common construction equipment, which lists a vibratory roller as generating approximately 76 VdB at 100 feet, which would be below the 80 VdB threshold. Therefore, construction vibration impacts would be less than significant.

For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The proposed project is not located within an airport land use plan or within two miles of a public airport or public use airport. The nearest public airport is the Ramona Airport, located approximately 12 miles southeast of the project site; no impact would occur. Additionally, the proposed project is not located within the vicinity of a private airstrip. The nearest private airport is Lake Wohlford Resort Airstrip located approximately six miles northeast of the project area. Airstrip-related noise impacts would not occur.

XIV. POPULATION AND HOUSING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	■

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	■

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

No Impact. The proposed project does not include housing or commercial development that would directly affect the number of residents or employees in the area and would not contribute to the creation of additional housing or jobs in the City of Escondido. Rather, the proposed project concept would improve the quality of recycled water to local agricultural growers and capture valuable water resources. Therefore, no impacts would occur.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The proposed project includes the development of a treatment facility on land that is not currently used for housing. The proposed project would not remove housing and would not displace substantial numbers of people or housing, necessitating the construction of replacement housing elsewhere. Therefore, no impacts would occur.

XV. PUBLIC SERVICES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
a) Fire protection?	☐	☐	☐	■
b) Police protection?	☐	☐	☐	■
c) Schools?	☐	☐	☐	■
d) Parks?	☐	☐	☐	■
e) Other public facilities?	☐	☐	☐	■

a) Fire protection?

No Impact. Escondido Fire Department provides fire protection services in the project area. The proposed project would not change existing demand for fire protection services because operation of the project would not result in a substantial increase in employees or population. Therefore, the project would not substantially increase the need for new fire department staff or new facilities, and the proposed project would have no impacts associated with fire protection services.

b) Police protection?

No Impact. Escondido Police Department provides law enforcement services in the project area. The proposed project includes the construction of a water treatment facility to provide additional recycled water to agricultural growers in the area via existing pipelines. Construction activities would be short-term and limited to a maximum of 50 construction workers including management staff. The proposed project would require one new full-time employee and would not provide new residents to the area. Workers would conduct monthly maintenance visits. In addition, the new treatment facility would be enclosed by security walls and fencing. As a result, the proposed project is not anticipated to require additional police protection services, and no impacts would occur.

c) Schools?

No Impact. The proposed project involves the installation of a water treatment facility and would not introduce inhabitants to the project area that would require additional schools. No impacts would occur.

d) Parks?

No Impact. The proposed project involves the installation of a water treatment facility and would not introduce inhabitants to the project area that would require construction of new parks. No impacts would occur.

e) Other public facilities?

No Impact. The proposed project involves the installation of a water treatment facility and would not introduce inhabitants to the project area that would require additional public facilities. Therefore, no impacts would occur.

XVI. RECREATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	■

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	■

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact. The proposed project consists of construction of a MFRO Facility. The project would not introduce inhabitants or visitors that would use existing recreational facilities or create the need for new facilities. The proposed project would not result in physical deterioration of an existing open space area or any recreation facilities. Therefore, no impacts would occur.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

No Impact. The proposed project does not involve or require the construction or expansion of recreational facilities. Therefore, no impacts would occur.

XVII. TRANSPORTATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☐	■
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	■	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	■	☐
d) Result in inadequate emergency access?	☐	☐	■	☐

a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

No Impact. The proposed project involves the construction of a MFRO water treatment facility. Construction would take place both in the lot the permanent MFRO facility would be located, and within

roadways during pipeline alignment. Project-related traffic would be minimal and would not cause a significant increase in congestion. However, construction associated with the pipeline installation and/or driveway improvements would result in segments of Washington Avenue being narrowed for through traffic. These impacts would be temporary, and the roadways would be restored to existing conditions following the completion of construction. Additionally, operation of the proposed project would not substantially increase traffic. Operation would require on full-time on-site employee, with additional employees needed for monthly facility maintenance, delivery, and removal of chemicals. In addition, nine chemical deliveries would be expected monthly for normal operation of the facility. These minor changes in traffic would not conflict with the applicable program plan, ordinance, or policy; namely the City of Escondido Zoning Code Article 47, or the General Plan Mobility and Infrastructure Element. Impacts would not occur.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less than Significant Impact. The analysis of vehicle miles traveled in CEQA Guidelines section 15064.3 provides that transportation impacts of projects are, in general, best measured by evaluating the project's vehicle miles traveled. Vehicle miles traveled reflects both the number and the distance of the trips taken. Construction activities would require the delivery of construction equipment and materials to the project site, in addition to the removal of construction waste from the site; however, such trips would be both brief and infrequent. Operation of the proposed project would require on full-time on-site employee, with additional employees needed for monthly facility maintenance, delivery, and removal of chemicals. In addition, nine chemical deliveries would be expected monthly for normal operation of the facility. As such, the number of trips taken would be minimal. Additionally, the City's Utility Department is located 0.7 mile from the MFRO facility. Therefore, if the MFRO facility's employee is also an employee of the City's Utility Department, the distance of the commute would not increase substantially. Implementation of the proposed project would not substantially increase vehicle miles traveled during construction or operation because both the number and distance of trips taken would be minimal. As such, the project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3. Impacts would be less than significant.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less than Significant Impact. There would be no hazardous design features or incompatible uses introduced as a result of the project. Construction would take place both in the lot the permanent MFRO facility would be located, and within roadways during pipeline alignment. However, the roadways would be restored to existing conditions and no permanent changes to roadways would occur. Construction equipment would be stored at the project site temporarily during the construction period but would be secured when not in use so as not to pose a hazard to the surrounding area. As such, the proposed project would not substantially increase hazards due to a geometric design feature or incompatible uses, and impacts would be less than significant.

d) Result in inadequate emergency access?

Less than Significant Impact. The project area would be accessed via a private driveway off of West Washington Avenue. Project-related traffic would be minimal and would not cause a significant increase in congestion. During construction of the project, heavy construction-related vehicles could interfere with emergency response to the site or emergency evacuation procedures in the event of an emergency

(e.g., vehicles traveling behind the slow-moving truck). Additionally, construction associated with the pipeline installation and/or driveway improvements would result in segments of Washington Avenue being narrowed for through traffic. As described in Section 2.5.4 of this Initial Study, a Traffic Control Plan would be prepared as part of the project, which includes strategies to maintain two-way traffic flow on West Washington Avenue, would ensure that access for emergency vehicles would be maintained at all times. There is also an existing emergency exit/entrance off of West Washington Avenue that would be maintained and used as necessary for emergency vehicles only. As a result, the project's construction impacts would be less than significant. Operation of the proposed project would involve minimal and infrequent traffic in and out of the project site and would not result in interference with emergency response access. The impacts related to the operation of the project would be less than significant.

XVIII. TRIBAL CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	☐	■	☐	☐
ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	■	☐	☐

a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?

ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Less than Significant with Mitigation Incorporated. As detailed in Section V.b (Cultural Resources) the general vicinity of the project site is known to have been occupied by the Luiseño and Kumeyaay people for thousands of years. The SCIC record search indicated that 70 cultural resources have been recorded within a half-mile of the project APE; however, the 70 resources consist of only one prehistoric isolate and 69 historic buildings. Furthermore, no resources were identified within the project area during the field investigation of the site.

A Sacred Lands File search for the project APE completed by the NAHC yielded positive results, with the San Luis Rey Band of Mission Indians indicating that sensitive discoveries have occurred immediately north of the Escondido Creek channel. Letters regarding the project were sent on March 8, 2019 to all contacts listed by the NAHC. One response been received. In a letter dated March 22, 2019, the Viejas Band of Kumeyaay Indians (Viejas) indicated that the general project area has cultural significance or ties to Viejas and requested that a Kumeyaay Cultural Monitor be on site for ground disturbing activities to inform them of any new developments such as inadvertent discovery of cultural artifacts, cremation sites, or human remains. In accordance with the requirements of AB 52, the City sent notification to four Native American Tribes traditionally and culturally affiliated with the project area on July 31, 2019. In a response dated August 12, 2019, the Rincon Band of Luiseño Indians (Rincon) identified the location as being within the Territory of the Luiseño people, and also within Rincon's specific area of Historic interest. Furthermore, Rincon identified one Luiseño place name within close proximity to the project site. As such, Rincon requested the completion of an archaeological record search and assessment with results being provided to them. No response was received from the San Luis Rey Band of Mission Indians, Soboba Band of Luiseño Indians, or Mesa Grande Band of Mission Indians. The Rincon Tribe requested formal consultation, which was conducted with City staff on October 22, 2019. Rincon indicated that although there were no tribal cultural resources identified on the project site, there is the potential for the proposed project to impact unknown tribal cultural resources and requested that a Luiseño Cultural Monitor be on the site for ground disturbing activities and also that the 10 Cultural Mitigation measures that were developed with the Tribes input be incorporated. Therefore, implementation of mitigation measures CUL-1 through CUL-10, identified in Section V of this Initial Study, would reduce these potential impacts to a less than significant level.

XIX. UTILITIES AND SERVICE SYSTEMS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☐	■
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☐	■
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	■
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	■	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	■

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

No Impact. The proposed project site is currently occupied with one single-wide trailer used by a non-profit recycling group, one quadruple-wide trailer used for training by various City departments, a metal storage building, and an asphalt paved parking lot. Construction would also take place on nearby roadways during pipeline alignment. Implementation of the proposed project involves the construction of a water treatment facility, so the relocation or construction of a wastewater treatment facility as a result of the project is not necessary. Electrical power for the proposed project would be supplied by SDG&E via an outdoor 3,000 kVA pad mounted transformer at 480 V, and standby power would be provided by an outdoor 480V, 1,750-kilowatt diesel engine generator. Although electrical conduit routing would be required along Washington Avenue, the project's electrical equipment would be located on site inside the process building electrical room and would not require the relocation or construction of an electric power facility. Additionally, the project would not need more resources than what can be sufficiently provided by existing natural gas or telecommunications facilities. The project would not require or result in the relocation or construction of electric power, natural gas, or telecommunications facilities. Therefore, there would be no impact.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

No Impact. The proposed project involves the construction of a MFRO facility, which would provide advanced treatment for Title 22 quality reuse water produced at the HARRF and would have a total production capacity of 2.0 mgd. Minimal amounts of water would be required to operate the facility. Implementation of the proposed project would actually have a positive impact on water availability, since the recycled water would off-set existing potable water uses. The recycled water would be stored in the proposed tank and distributed to local farmers nearby for agricultural use. Therefore, the project would have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years. There would be no impact.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

No Impact. The proposed project involves the construction of a wastewater treatment facility. The MFRO facility would not substantially generate wastewater that would need to be treated and would not cause a wastewater treatment provider to have inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments. As stated above in item XIX.b, implementation of the proposed project would be processing recycled water, which would be used for agricultural purposes. Therefore, there would be no impact.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less than Significant Impact. Construction and implementation of the proposed project is not anticipated to generate a significant amount of solid waste. The construction contractor would be required to dispose of excavated soil and solid wastes in accordance with local solid waste disposal requirements. Construction of the proposed project would result in a total excavation of approximately 10,000 cubic yards of soil (500 cubic yards daily). All non-recyclable solid waste generated during construction would be taken to a landfill with sufficient permitted capacity. Onsite soils could also be used for fill, and, in this case, would not be disposed of at a solid waste facility. Additionally, construction and operation of the proposed project would result in minimal solid waste that would not exceed State or local standards, nor impair the attainment of solid waste reduction goals. Impacts would be less than significant.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

No Impact. Construction and operation of the proposed project would result in minimal solid waste that would be hauled offsite to a local landfill in compliance with federal, state, and local statutes related to solid waste. No impacts would occur.

XX. WILDFIRE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	■	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	■	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	■
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	■	☐

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact. The City has adopted an Emergency Evacuation Plan, outlined in the City's General Plan EIR (City 2012). The proposed project would be included in this plan because the project site is located within the city limits. The project site is accessed from West Washington Avenue, which is a roadway that is identified as part of the Emergency Evacuation Plan. Additionally, the project site is located east of the intersection of Rock Springs Road and Washington Avenue, which is also part of the Emergency Action Plan. As stated above in item IX.f, during construction, heavy construction-related vehicles could interfere with emergency response to the site or emergency evacuation procedures in the event of an emergency (e.g., vehicles traveling behind the slow-moving truck). In addition, construction associated with the pipeline installation and/or driveway improvements would result in segments of West Washington Avenue being narrowed for through traffic. As described in Section 2.5.4, a Traffic Control Plan would be prepared as part of the project, which includes strategies to maintain two-way traffic flow on West Washington Avenue, would ensure that access for emergency vehicles would be maintained at all times. There is also an existing emergency exit/entrance off of West Washington Avenue that would be maintained and used as necessary for emergency vehicles only. As a result, the project's construction impacts would be less than significant. Operation of the proposed project would involve minimal and infrequent traffic in and out of the project site and would not result in interference with emergency response access, so the impacts related to the operation of the project would be less than significant. Implementation of the proposed project would not substantially impair an adopted emergency response plan or emergency evacuation plan. All impacts would be less than significant.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less than Significant Impact. In the City's General Plan EIR, nearly every section within city limits is classified as being a Moderate, High, or Very High Fire Hazard Zone on a Wildfire Risk Map. Areas were classified into zones based on their terrain, weather, and other factors relevant to exacerbating wildfires. According to the Wildfire Risk Map, the project site is located in a Moderate Fire Hazard Zone, which is lower than many of the surrounding areas (City 2012). Additionally, implementation of the proposed project would not heighten wildfire risks, as it would include structures that would install standard fire safety features and the site is almost entirely developed with and surrounded by urban uses. Therefore, the proposed project would not exacerbate wildfire risks due to slope, prevailing winds, and other factors, and any impacts related to exposing project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire would be less than significant.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No Impact. The proposed project is located in a commercial and industrial area, and would not install infrastructure such as roads, fuel breaks, emergency water sources, power lines, or other utilities that may exacerbate fire risk. A portion of the construction would be conducted within roadways, but roadways would be restored to existing conditions following the completion of construction and no new roads would be introduced as a result of the project. Road work associated with the project would not exacerbate fire risk or result in temporary or ongoing impacts to the environment. The proposed project involves the construction of a water treatment facility. Electrical power for the proposed project would be supplied by the San Diego Gas & Electric (SDG&E) via an outdoor 3,000 kilovolt-ampere (kVA) pad mounted transformer at 480 volt (V). All electrical equipment would be located on site inside the process building electrical room. Standby power would be provided by an outdoor 480V, 1,750-kilowatt diesel engine generator. Construction of the proposed project would require electrical conduit routing, which would occur on West Washington Avenue between Rock Springs Road and Metcalf Street. However, work would be both minimal and temporary, and would not exacerbate fire risk or result in temporary or ongoing impacts to the environment. Impacts would be less than significant.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less than Significant Impact. The proposed project involves the construction of a MFRO water treatment facility located in a commercial and industrial area. As stated in item XX.b above, the proposed project would not exacerbate wildfire risks due to slope, prevailing winds, and other factors, and would not expose project occupants to significant levels of pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. The risk of people and structures experiencing significant risks such as downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes is negligible. As such, impacts would be less than significant.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	■	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of past, present and probable future projects)?	☐	☐	■	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	■	☐	☐

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less than Significant with Mitigation Incorporated. Potentially significant impacts to the environment resulting from the proposed project have been identified for the areas of biological resources, cultural resources (including tribal cultural resources), geology (paleontological resources), hazards and hazardous materials, and noise. The project would not degrade the quality of the environment for plant or animal communities, substantially reduce the habitat of a fish or wildlife species, cause fish or wildlife populations to drop below self-sustaining levels or threaten to eliminate a plant or animal community.

The project has the potential to impact a protected wildlife species, specifically birds and raptors protected under the MBTA and CFG Code. However, by implementing mitigation measure BIO-1, impacts would be reduced to below a level of significance.

The project is not expected to impact resources related to major periods of California history or prehistory. Based on the cultural sensitivity of the project region, however, the project would have the potential to impact unknown subsurface cultural, paleontological and tribal cultural resources. With implementation of mitigation measures CUL-1 through CUL-10 and GEO-1, however, impacts to

unknown subsurface cultural, paleontological and tribal cultural resources would be reduced to below a level of significance.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of past, present and probable future projects)?

Less than Significant Impact. Cumulative impacts are defined as two or more individual project effects that, when considered together or in concert with other projects, combine to result in a significant impact (CEQA Guidelines Section 15355). As shown in Table 9, *Cumulative Projects List*, there are multiple past, present, and reasonably foreseeable projects occurring in Escondido. The projects are characterized as residential or industrial in nature and occur in various parts of the city.

Table 9
CUMULATIVE PROJECTS LIST

Project	Location/Distance from Project Site	Land Use	Quantity
Cemetery Area Water Pipeline Replacement Project	Near the North County Cemetery District/3.0 miles east	Potable water pipeline	12,600 linear feet of new pipeline
Channel Maintenance Activities Project	Various sites throughout Escondido	Flood control	63 maintenance sites
Recycled Water Easterly Main Project	Adjacent to proposed project	Infrastructure	7.4 miles of pipeline
Recycled Water Easterly Agriculture Distribution System	Unincorporated San Diego County/2.9 miles southeast	Infrastructure	2.20 miles of pipeline
Emergency Recycled Water Storage Pond	Unincorporated San Diego County/3.2 miles southeast	Infrastructure	10 million gallon emergency storage pond
SR-78 Pavement Rehabilitation (Caltrans)	Start at the intersection of Lincoln Parkway and Broadway/SR-78 and terminate at the intersection of Flora Vista Street and San Pasqual Valley Road/SR-78	Infrastructure	Improvements would occur on approximately 4.2 miles of roadway.

Source: City of Escondido 2020

The closest project is the Recycled Water Easterly Main Project, occurring adjacent to the east end of the proposed project. The Recycled Water Easterly Main Project involves the construction of a water storage tank and 7.4 miles of pipeline to store and transport recycled water produced at the HARRF. A portion of this pipeline would be in proximity to the eastern end of the pipeline of the proposed project. However, the construction of this project has been completed, so cumulative construction-related impacts would not occur.

There is potential for the construction schedules of the remaining projects proposed by the City to overlap. However, the remaining projects are over one mile away from the proposed project and are therefore at such a distance that cumulative impacts would be minimal. Additionally, the proposed MFRO project is almost exclusively limited to construction-related effects that would occur at the MFRO

site and along the pipeline corridor. Removal of trees would be monitored to protect nesting birds and raptors, impacts to unknown buried cultural resources would be avoided through construction monitoring, impacts from encountering adverse hazardous conditions during construction would be minimized with a SGWMP, and temporary noise effects would be limited through implementation of noise abatement measures. Potential impacts associated with simultaneous construction of the projects would be short-term and limited by minimal construction workers traveling to the site. The minimal noise impacts generated during construction would be less than cumulative considerable due to the distance between the proposed project and the other projects and the proposed mitigation measures. The projects would comply with existing federal, state, and local regulations pertaining to hazardous materials use, treatment, storage and disposal. Furthermore, impacts related to biological and cultural impacts would be less than cumulatively considerable with the implementation of required mitigation measures.

The Caltrans project for pavement rehabilitation on SR-78 would potentially overlap with approximately 385 feet of the MFRO product water pipeline alignment within Washington Avenue. It is not known specifically when the section of pipeline that is overlapped with the roadway improvements Caltrans is scheduling will be conducted, but the City would work with Caltrans to prioritize that portion so that the pipeline is installed prior to the Caltrans improvements, minimizing potentially overlapping impacts. Therefore, the project would not result in impacts that are individually limited but cumulatively considerable.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than Significant with Mitigation Incorporated. The proposed project would adhere to regulatory codes, ordinances, regulations, standards, and guidelines applicable to each of the environmental issue areas analyzed herein. As described above, potentially significant impacts resulting from the proposed project with the potential to cause adverse effects on human beings have been identified for the area of hazards and hazardous materials. With implementation of mitigation measure HAZ-1 however, the project is not expected to result in significant long-term or short-term impacts, or result in substantial adverse effects on human beings, either directly or indirectly. Additionally, construction-related noise has the potential to cause substantial adverse effects on human beings. However, execution of mitigation measure NOI-1 would reduce impacts to a less than significant level.

EXECUTIVE SUMMARY

This report presents an assessment of potential air quality and greenhouse gas (GHG) emission impacts during construction and operation of the City of Escondido's (City's) proposed Membrane Filtration Reverse Osmosis (MFRO) Facility Project (project). The MFRO Facility would provide advanced treatment for Title 22 quality reuse water produced at the Hale Avenue Resources Recovery Facility (HARRF). The MFRO facility would consist of a MFRO process building, outdoor storage tanks and pump stations, and underground pipeline connections to existing City water and wastewater infrastructure, including a product water pipeline along Washington Avenue. The proposed MFRO facility would be located at the City-owned lot at 901 West Washington Avenue.

The project would result in emissions of criteria air pollutants during construction and operation. Construction emission sources would include fugitive dust, heavy construction equipment exhaust, and vehicle trips associated with workers and haul trucks. Construction of the project would comply with San Diego Air Pollution Control District (SDAPCD) Rule 55, *Fugitive Dust*. Operational emissions associated with the project would include pollutants primarily associated with energy use, vehicular traffic related to staff activities and chemical deliveries, and emissions from the standby generator. Project emissions of criteria pollutants during general construction activities would not exceed City significance thresholds. Operational emissions would be below the City significance thresholds.

Construction and operation of the project would not result in exposure of sensitive receptors to significant quantities of toxic air contaminants (TACs), including diesel particulate matter from heavy equipment exhaust and the proposed diesel-powered standby generator. Odors emissions from construction and operational activities would not adversely affect a substantial number of people.

Construction sources of GHG emissions would include heavy construction equipment and worker vehicle trips. Operational sources of GHG emissions sources would include energy, solid waste, stationary (standby generator), mobile (transportation), and water use. The project-related construction activities are estimated to generate a total of 881.6 metric tons (MT) of carbon dioxide equivalent (CO_2e). Construction emissions are amortized over 30 years, such that the proposed construction activities would contribute an average of 29.4 MT per year of CO_2e emissions. The project-related operational and amortized construction GHG emissions are estimated to generate 635.6 MT CO_2e per year. Project emissions would remain below the 2023 adjusted GHG threshold of 2,145 MT CO_2e per year established by the City. The project would not conflict with the City's Climate Action Plan or other regional and statewide GHG reduction plans.

The project is seeking funding from the Drinking Water State Revolving Fund for a portion of the construction work. As such, the project is subject to review by the State Water Resources Control Board and is required to show conformance with the federal standards. Project emissions of criteria pollutants during construction and operations would be below the General Conformity de minimis thresholds and, therefore, would be in conformance with the federal Clean Air Act.

This page intentionally left blank

1.0 INTRODUCTION

This report presents an assessment of potential air quality and greenhouse gas (GHG) emissions impacts during construction and operation of the proposed City of Escondido (City) Membrane Filtration Reverse Osmosis (MFRO) Facility Project (project). The analysis has been prepared to support environmental review under the California Environmental Quality Act (CEQA) and federal standards (CEQA-Plus) as implemented under the State Water Resources Control Board (SWRCB) for the Clean Water State Revolving Fund (SRF) Program.

1.1 PROJECT LOCATION

The project site is located at 901 West Washington Avenue, approximately 55 feet southwest of the West Washington Avenue and Rock Springs Road intersection in the City of Escondido. The site is approximately 10.3 acres in size comprising Assessor's Parcel Number (APN) is 232-090-72-00 and is owned by the City. The site is accessible via a driveway along West Washington Avenue and a shared access driveway with two gated entrances on the west side. The site also is accessible towards the southeastern corner of the property from a bridge across the concrete flood control channel that connects the site to the City's Public Works Yard. The project site has a General Plan designation of GI (General Industrial) and is zoned as M-2 (General Industrial). See Figure 1, *Regional Location*, and Figure 2, *Project Location (Aerial Photograph)*.

1.1.1 Existing Site Conditions

The site is currently developed with one single-wide trailer used by a non-profit recycling group, one quadruple wide trailer used for training by various City departments, a metal storage building, and an asphalt paved parking lot. The remainder of the site is used by the City Public Works for storage and heavy equipment training, except for a location on the west side that is leased to a waste disposal corporation for the storage of empty roll-off bins.

1.2 PROJECT COMPONENTS

The proposed project would consist of a commercial/industrial building and associated tanks and processing/pumping equipment. The building would include partitioned areas to house the MFRO equipment, pumps, chemical storage, electrical room, control room, restrooms, break room, and janitorial closet. The MFRO Facility treatment equipment is proposed to operate with a minimum production capacity of 0.5 million gallons per day (mgd) (350 gallons per minute [gpm]), and maximum RO effluent production capacity of 2.0 mgd (1,390 gpm) which would be blended with conventionally (tertiary) recycled water for distribution (product water). The project would also include a new approximately one (1)-mile long product water pipeline that would transport the product water to an existing recycled water pipeline. Each component is further described below.

1.2.1 Facility Structures

The MFRO process building would be approximately 25,000 square feet with dimensions of approximately 192 feet long by 130 feet wide. The building would be divided into an equipment room to house the MFRO equipment, pumps, electrical room, and control room. Two restrooms, a break room,

and janitorial closet would also be provided. All equipment would be selected based on mechanical specifications to meet noise and efficiency standards.

Outside of the MFRO process buildings additional processing equipment would be constructed including: a 240,000-gallon inter-process storage tank (50 feet in diameter, 32 feet tall); an 800,000-gallon product storage blend tank (104 feet in dimeter, 34 feet tall); a product water pump station; and a 1,400-cubic foot surge tank. See Figure 3, *Site Plan*.

1.2.2 Pipelines

The new 24-inch product water pipeline would transport the blended product water approximately 1 mile east along Washington Avenue and south on Waverly Place to the existing recycled water pipeline, see Figure 2. In addition, pipelines entering the project site from the channel or south side would include the HARRF reuse influent pipeline, brine/reject waste return pipeline, storm drain, and fiber optic conduit. Potable water, electric and facility product water would enter/exit from Washington Avenue. All process piping outside of the building would be buried, with the exception of areas near connections for accessibility.

1.2.3 Storm Water Biofiltration Basin

An existing 54-inch storm drain is located along the east side of the site with a curb inlet close to the corner of West Washington Avenue and Rock Springs Road. The Escondido Creek concrete-lined Flood Control Channel drainage channel is also located south of the project site.

The project includes an on-site storm water biofiltration basin to capture, treat, and release the water at a controlled rate as dictated by the City's storm water requirements. The basin directs water into the existing 54-inch storm drain and then conveys the storm water to the Escondido Creek Flood Control Channel drainage channel, utilizing the existing channel outlet.

1.2.4 Standby Power Generator

The project would include a standby power generator. The generator would be a 480-volt (V), 1,750-kilowatt diesel-engine (approximately 2,400 horsepower) generator with a sound mitigating enclosure. The engine-generator package would be approximately 60 feet long, 13 feet wide, and 18 feet high. An exhaust particulate filter/silencer would be provided and sized to meet San Diego Air Pollution Control District (SDAPCD) requirements as needed. The generator would only operate during loss of utility power. However, it would be tested on a monthly basis during business hours and within SDAPCD operational limits.

1.2.5 Decanting Facility and Storage Bins

Construction of the MFRO facility would displace existing facilities used by the Escondido Public Works and Utilities/Water Departments for vactor truck decanting and material storage. These facilities would be relocated within the site, as shown on Figure 3. The decanting facility would be approximately 4,800 square feet in size, with four dump/wash bays and two concrete pads for dumpsters. The facility would be constructed to allow for drying and handling of material from vactor trucks, the contents and volumes of which are different for each Department. One bay will be reserved for cleaning of street sweeping vehicles. Decanted liquid waste from all bays would drain to a clarifier (sand/oil separator)

prior to discharging to the sanitary sewer system. The decanting facility would be roofed or have a rain valve, and storm water runoff would drain through a pipe to the MFRO treatment basin.

The material storage bins are open loading bins which house material used for City Public Works and Utilities Water operations. The size of the relocated concrete pad is approximately 12,250 square feet. Contents of the loading bins include raw bitumen/asphalt, mulch, greenery, gravel, class 2 base, shopping carts/large appliances, dirt, and trash. These bins are not currently covered with a roof, but the relocated bins would be designed to accommodate the future installation of a roof. Runoff from the bins would be treated either through a piped connection to the MFRO facility stormwater treatment basin (if roofed) or through a separate stormwater treatment facility (if unroofed).

1.2.6 Fencing and Landscaping

The proposed project would include security walls and fencing. The existing fence along Washington Avenue would be removed and replaced with 6-foot high wrought iron fencing. Fencing along other property lines may be spot repaired or modified but are generally considered suitable for the parcel.

New perimeter ornamental landscaping would buffer and minimize views the proposed facility components and consist of low maintenance, low demand, and fast-growing plantings including trees.

1.3 PROJECT CONSTRUCTION

Project construction is anticipated to be approximately 24 months. Construction would occur Monday through Friday; construction hours would be 7:00 a.m. to 4:30 p.m. The maximum construction crew is expected to range from four to 50 persons but would vary during the course of the proposed project construction in accordance with the means and methods of the contractor.

It is anticipated that soil import/export would be limited via a balanced grading plan for the relatively small area of this large plot of land. Soil hauling would occur over approximately one month. Any disposal of the excavated materials would be disposed of at an appropriate permitted disposal site depending on the type of material. Onsite soils are anticipated as suitable for fill.

1.3.1 Construction Equipment

Construction of the proposed new facilities would involve the use of a wide variety of heavy construction equipment onsite. The majority of the equipment and vehicles would be associated with the site preparation and grading, structural, and paving phases of construction. Large construction equipment, including backhoes, bore/drill rigs, cement mixers, industrial saws, compactors, cranes, excavator, forklifts, graders, haul trucks, loaders, pavers, rollers, sweepers, trenchers would be used during the construction phase of the proposed project.

1.3.2 Pipeline Construction

The maximum trench depth would be 8.5 feet deep. The maximum trench width would be 6 feet wide (12 inches clear on each side of a 24-inch pipe).

1.3.3 Building Foundations

Slabs on grade would be supported with a six-inch layer of untreated aggregate base overlain by a ten-millimeter thick impermeable plastic membrane. The tank and building foundations would be supported on three feet of geogrid reinforced soil (geogrid spaced at 12-inch intervals in the soil). On-site soils could be used for fill, compacted to 90 percent of its maximum dry density.

2.0 REGULATORY SETTING

2.1 AIR QUALITY

2.1.1 Air Pollutants of Concern

2.1.1.1 Criteria Pollutants

Criteria pollutants are defined by state and federal law as a risk to the health and welfare of the general public. Criteria air pollutants include the following compounds:

- Ozone (O_3)
- Reactive organic gases (ROGs) or volatile organic compounds (VOCs)[1]
- Carbon monoxide (CO)
- Nitrogen dioxide (NO_2)
- Particulate matter (PM) which is further divided into coarse particulate matter less than 10 microns (PM_{10}) and fine particulate matter less than 2.5 microns ($PM_{2.5}$)
- Sulfur dioxide (SO_2)
- Lead (Pb)

Air pollutants are categorized into primary and secondary pollutants. Primary air pollutants are those that are emitted directly from sources. Primary criteria pollutants are: CO; SO_2; PM_{10}; $PM_{2.5}$; and lead. Secondary pollutants are formed in the atmosphere through chemical and photochemical reactions of pollutant precursors. Secondary criteria pollutants are ozone, NO_2, PM_{10}, and $PM_{2.5}$ formed by reactions of the principal pollutant precursors ROG, nitrogen oxides (NO_X), and sulfur oxides (SO_X). Note that PM_{10} and $PM_{2.5}$ can be both primary pollutants and secondary pollutants.

The descriptions of sources and general health effects for each of the criteria air pollutants are shown in Table 1, *Summary of Common Sources and Human Health Effects of Criteria Air Pollutants,* based on information provided by the California Air Pollution Control Officers Association (CAPCOA; 2018). Specific adverse health effects to individuals or population groups induced by criteria pollutant emissions are highly dependent on a multitude of interconnected variables (e.g., cumulative concentrations, local meteorology and atmospheric conditions, and the number and character of exposed individuals [e.g., age, gender]). Criteria pollutant precursors (ROG and NO_X) affect air quality on

[1] CARB defines and uses the term ROGs while the USEPA defines and uses the term VOCs. The compounds included in the lists of ROGs and VOCs and the methods of calculation are slightly different. However, for the purposes of estimating criteria pollutant precursor emissions, the two terms are often used interchangeably.

a regional scale, typically after significant delay and distance from the pollutant source emissions. Health effects related to ozone, NO_2, and secondary PM are the product of emissions generated by numerous sources throughout a region. Emissions of primary criteria pollutants from vehicles traveling to or from the project site (i.e., PM_{10}, and $PM_{2.5}$) are distributed nonuniformly in location and time throughout the region, wherever the vehicles may travel. As such, specific health effects from these criteria pollutant emissions cannot be directly correlated to the incremental contribution from a single project.

Table 1
SUMMARY OF COMMON SOURCES AND HUMAN HEALTH EFFECTS OF CRITERIA AIR POLLUTANTS

Pollutant	Major Man-Made Sources	Human Health Effects
Carbon Monoxide (CO)	An odorless, colorless gas formed when carbon in fuel is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, affecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
Nitrogen Dioxide (NO_2)	A reddish-brown gas formed during fuel combustion for motor vehicles and industrial sources. Sources include motor vehicles, electric utilities, and other sources that burn fuel.	Respiratory irritant; aggravates lung and heart problems. Precursor to ozone and acid rain. Contributes to climate change and nutrient overloading which deteriorates water quality. Causes brown discoloration of the atmosphere.
Ozone (O_3)	Formed by a chemical reaction between reactive organic gases (ROGs) and nitrogen oxides (NO_X) in the presence of sunlight. Common sources of these precursor pollutants include motor vehicle exhaust, industrial emissions, gasoline storage and transport, solvents, paints, and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing, and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield. Damages rubber, some textiles and dyes.
Particulate Matter (PM_{10} & $PM_{2.5}$)	Produced by power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles, and other sources. Also formed by a chemical reaction between reactive organic gases (ROGs) and sulfur oxides (SO_X).	Increased respiratory symptoms, such as irritation of the airways, coughing, or difficulty breathing; aggravated asthma; development of chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility (haze).
Sulfur Dioxide (SO_2)	A colorless, nonflammable gas formed when fuel containing sulfur is burned, when gasoline is extracted from oil, or when metal is extracted from ore. Examples are petroleum refineries, cement manufacturing, metal processing facilities, locomotives, and ships.	Respiratory irritant. Aggravates lung and heart problems. In the presence of moisture and oxygen, sulfur dioxide converts to sulfuric acid which can damage marble, iron and steel. Damages crops and natural vegetation. Impairs visibility. Precursor to acid rain.
Lead	Metallic element emitted from metal refineries, smelters, battery manufacturers, iron and steel producers, use of leaded fuels by racing and aircraft industries.	Anemia, high blood pressure, brain and kidney damage, neurological disorders, cancer, lowered IQ. Affects animals, plants, and aquatic ecosystems.

Source: CAPCOA 2018

Other pollutants known as greenhouse gases (GHGs; e.g., carbon dioxide [CO_2]), have been linked to climate change. Unlike criteria air pollutants, there are no regulated concentration limits for GHGs. The regulatory setting for GHG emissions is discussed in subsection 2.2.

2.1.1.2 Toxic Air Contaminants

Toxic air contaminants (TACs) are a diverse group of air pollutants that may cause or contribute to an increase in deaths or in serious illness or that may pose a present or potential hazard to human health. TACs can cause long-term health effects such as cancer, birth defects, neurological damage, asthma, bronchitis, or genetic damage, or short-term acute effects such as eye watering, respiratory irritation (a cough), runny nose, throat pain, and headaches. TACs are considered either carcinogenic or noncarcinogenic based on the nature of the health effects associated with exposure to the pollutant. For carcinogenic TACs, there is no level of exposure that is considered safe and impacts are evaluated in terms of overall relative risk expressed as excess cancer cases per one million exposed individuals. Noncarcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis.

2.1.2 Federal Air Quality Regulations

2.1.2.1 Federal Clean Air Act

Air quality is defined by ambient air concentrations of specific pollutants identified by the U.S. Environmental Protection Agency (USEPA) to be of concern with respect to health and welfare of the public. The USEPA is responsible for enforcing the Federal Clean Air Act (CAA), first enacted in 1963 and amended numerous times in subsequent years (1965, 1967, 1970, 1977, and 1990). The CAA mandates the USEPA to establish National Ambient Air Quality Standards (NAAQS), which identify concentrations of pollutants in the ambient air below which no adverse effects on the public health and welfare are anticipated. In response, the USEPA established both primary and secondary standards for several criteria pollutants, which are introduced above. Table 2, *Ambient Air Quality Standards*, shows the federal and state ambient air quality standards for these pollutants.

The CAA allows states to adopt ambient air quality standards and other regulations provided they are at least as stringent as federal standards. CARB has established the more stringent California Ambient Air Quality Standards (CAAQS) for the six criteria pollutants described in Table 1 through the California Clean Air Act of 1988, and also has established CAAQS for additional pollutants, including sulfates, hydrogen sulfide (H_2S), vinyl chloride, and visibility-reducing particles. Areas that do not meet the NAAQS or the CAAQS for a particular pollutant are considered to be “nonattainment areas” for that pollutant.

Table 2
AMBIENT AIR QUALITY STANDARDS

Pollutant	Averaging Time	California Standards	Federal Standards	
			Primary[1]	Secondary[2]
O_3	1 Hour	0.09 ppm (180 µg/m^3)	–	–
	8 Hour	0.070 ppm (137 µg/m^3)	0.070 ppm (137 µg/m^3)	Same as Primary
PM_{10}	24 Hour	50 µg/m^3	150 µg/m^3	Same as Primary
	AAM	20 µg/m^3	–	Same as Primary
$PM_{2.5}$	24 Hour	–	35 µg/m^3	Same as Primary
	AAM	12 µg/m^3	12.0 µg/m^3	15.0 µg/m^3
CO	1 Hour	20 ppm (23 mg/m^3)	35 ppm (40 mg/m^3)	–
	8 Hour	9.0 ppm (10 mg/m^3)	9 ppm (10 mg/m^3)	–
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)	–	–
NO_2	1 Hour	0.18 ppm (339 µg/m^3)	0.100 ppm (188 µg/m^3)	–
	AAM	0.030 ppm (57 µg/m^3)	0.053 ppm (100 µg/m^3)	Same as Primary
SO_2	1 Hour	0.25 ppm (655 µg/m^3)	0.075 ppm (196 µg/m^3)	–
	3 Hour	–	–	0.5 ppm (1,300 µg/m^3)
	24 Hour	0.04 ppm (105 µg/m^3)	–	–
Lead	30-day Avg.	1.5 µg/m^3	–	–
	Calendar Quarter	–	1.5 µg/m^3	Same as Primary
	Rolling 3-month Avg.	–	0.15 µg/m^3	
Visibility Reducing Particles	8 Hour	Extinction coefficient of 0.23 per km – visibility ≥ 10 miles (0.07 per km – ≥30 miles for Lake Tahoe)	**No Federal Standards**	
Sulfates	24 Hour	25 µg/m^3		
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)		
Vinyl Chloride	24 Hour	0.01 ppm (26 µg/m^3)		

Source: CARB 2016

Notes:

1 National Primary Standards: The levels of air quality necessary, within an adequate margin of safety, to protect the public health.

2 National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

AAM: Annual Arithmetic Mean; CO: carbon monoxide; ; km: kilometer; mg/m^3: milligrams per cubic meter; NO_2 nitrogen dioxide; O_3: ozone; ppm: parts per million; PM_{10}: coarse particulate matter with an aerodynamic diameter of 10 microns or less; $PM_{2.5}$: fine particulate matter with an aerodynamic diameter of 2.5 microns or less; SO_2: sulfur dioxide; –: No Standard; µg/m^3: micrograms per cubic meter.

The USEPA has classified air basins (or portions thereof) as being in "attainment," "nonattainment," or "unclassified" for each criteria air pollutant, based on whether or not the NAAQS have been achieved. If an area is designated unclassified, it is because inadequate air quality data were available as a basis for a nonattainment or attainment designation. The project site is located within the San Diego Air Basin (SDAB) and, as such, is in an area designated a nonattainment area for certain pollutants that are regulated under the CAA. Table 3, *San Diego Air Basin Attainment Status*, lists the federal and state attainment status of the SDAB for the criteria pollutants. The SDAB currently falls under a national

"maintenance plan" for CO, following a 1998 re-designation as a CO attainment area (SDAPCD 2010a). The SDAB is currently classified as a moderate nonattainment area for the 8-hour 2015 NAAQS for ozone and as a nonattainment area under the CAAQS for ozone, PM_{10}, and $PM_{2.5}$ (CARB 2018; USEPA 2019).

Table 3
SAN DIEGO AIR BASIN ATTAINMENT STATUS

Criteria Pollutant	Federal Designation	State Designation
O_3 (1-hour)	(No federal standard)	Nonattainment
O_3 (8-hour)	Moderate Nonattainment	Nonattainment
CO	Attainment (Maintenance)	Attainment
PM_{10}	Unclassified	Nonattainment
$PM_{2.5}$	Unclassified/Attainment	Nonattainment
NO_2	Unclassified/Attainment	Attainment
SO_2	Attainment	Attainment
Lead	Unclassified/Attainment	Attainment
Sulfates	(No federal standard)	Attainment
Hydrogen Sulfide	(No federal standard)	Unclassified
Visibility	(No federal standard)	Unclassified

Source: CARB 2018; USEPA 2019

The CAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as the State Implementation Plan (SIP). The CAA Amendments dictate that states containing areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The SIP is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The USEPA has the responsibility to review all SIPs to determine whether they conform to the requirements of the CAA.

2.1.3 California Air Quality Regulations

2.1.3.1 California Clean Air Act

The federal CAA allows states to adopt ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. CARB, a part of the California EPA (CalEPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the CAAQS. CARB also conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB also has primary responsibility for the development of California's SIP, for which it works closely with the federal government and the local air districts. The state standards attainment status for the SDAB is listed in Table 3, above.

2.1.3.2 Toxic Air Contaminants

California's air toxics control program began in 1983 with the passage of the Toxic Air Contaminant Identification and Control Act, better known as Assembly Bill (AB) 1807 or the Tanner Bill. When a compound becomes listed as a TAC under the Tanner process, CARB normally establishes minimum

statewide emission control measures to be adopted by local air pollution control districts (APCDs). Later legislative amendments (AB 2728) required CARB to incorporate all 189 federal hazardous air pollutants (HAPs) into the state list of TACs.

Supplementing the Tanner process, AB 2588 (the Air Toxics "Hot Spots" Information and Assessment Act of 1987) currently regulates over 600 air compounds, including all of the Tanner-designated TACs. Under AB 2588, specified facilities must quantify emissions of regulated air toxics and report them to the local APCD. If the APCD determines that a potentially significant public health risk is posed by a given facility, the facility is required to perform a health risk assessment (HRA) and notify the public in the affected area if the calculated risks exceed specified criteria.

On August 27, 1998, CARB formally identified diesel particulate matter (DPM) emitted by diesel-fueled engines as a TAC (CARB 2010). The particles emitted by diesel engines are coated with chemicals, many of which have been identified by the USEPA as HAPs and by CARB as TACs. CARB's Scientific Advisory Committee has recommended a unit risk factor (URF) of 300 in 1 million over a 70-year exposure period for diesel particulate. In September 2000, CARB approved the *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles* (Diesel Risk Reduction Plan; CARB 2000). The Diesel Risk Reduction Plan outlined a comprehensive and ambitious program that included the development of numerous new control measures over the next several years aimed at substantially reducing emissions from new and existing on-road vehicles (e.g., heavy-duty trucks and buses), off-road equipment (e.g., graders, tractors, forklifts, sweepers, and boats), portable equipment (e.g., pumps), and stationary engines (e.g., stand-by power generators). These requirements are now enforced on a statewide basis.

2.1.4 Local Regulations

2.1.4.1 San Diego Air Pollution Control District

The project is located in San Diego County (County). Air quality in the County is regulated by the SDAPCD. As a regional agency, the SDAPCD works directly with local governments and cooperates actively with all federal and state government agencies. The SDAPCD develops rules and regulations; establishes permitting requirements for stationary sources; inspects emissions sources; and enforces such measures through educational programs or fines, when necessary.

2.1.4.2 Air Quality Plans

The SDAPCD is the local agency responsible for the administration and enforcement of air quality regulations for the County. The SDAPCD and San Diego Association of Governments (SANDAG) are responsible for developing and implementing the clean air plan for attainment and maintenance of the ambient air quality standards in the SDAB. The County's Regional Air Quality Strategies (RAQS) were initially adopted in 1991 and are updated on a triennial basis. The most recent revision of the RAQS was adopted by the SDAPCD in December 2016 (SDAPCD 2016a). The local RAQS, in combination with those from all other California nonattainment areas with serious (or worse) air quality problems, is submitted to CARB, which develops the California SIP. The SIP relies on the same information from SANDAG to develop emission inventories and emission reduction strategies that are included in the attainment demonstration for the air basin.

2.1.4.3 Rules

The project would incorporate best management practices (BMPs) during construction to reduce emissions of fugitive dust. SDAPCD Rule 55 – Fugitive Dust Control states that no dust and/or dirt shall leave the property line, as follows (SDAPCD 2009):

1. **Airborne Dust Beyond the Property Line:** No person shall engage in construction or demolition activity subject to this rule in a manner that discharges visible dust emissions into the atmosphere beyond the property line for a period or periods aggregating more than 3 minutes in any 60-minute period.

2. **Track-Out/Carry-Out:** Visible roadway dust as a result of active operations, spillage from transport trucks, erosion, or track-out/carry-out shall:

   (i) be minimized by the use of any of the following or equally effective track-out/carry-out and erosion control measures that apply to the project or operation:

      (a) track-out grates or gravel beds at each egress point;

      (b) wheel-washing at each egress during muddy conditions, soil binders, chemical soil stabilizers, geotextiles, mulching, or seeding; and for outbound transport trucks;

      (c) using secured tarps or cargo covering, watering, or treating of transported material; and

   (ii) be removed at the conclusion of each work day when active operations cease, or every 24 hours for continuous operations. If a street sweeper is used to remove any track-out/ carry-out, only respirable particulate matter (PM_{10}) -efficient street sweepers certified to meet the most current South Coast Air Quality Management District (SCAQMD) Rule 1186 requirements shall be used. The use of blowers for removal of track-out/carry-out is prohibited under any circumstances.

In addition, the proposed diesel-powered standby generator would require a permit to operate from the SDAPCD. The generator would be required to comply with applicable state Air Toxic Control Measures (ATCMs), and/or federal New Source Performance Standards (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP), and applicable SDAPCD regulations, including Rule 69.4.1, *Stationary Reciprocating Internal Combustion Engines – Best Available Retrofit Control Technology*.

2.2 GREENHOUSE GAS EMISSIONS

2.2.1 Climate Change Overview

Global climate change refers to changes in average climatic conditions on Earth including temperature, wind patterns, precipitation, and storms. Global temperatures are moderated by atmospheric gases. These gases are commonly referred to as GHGs because they function like a greenhouse by letting sunlight in but preventing heat from escaping, thus warming the Earth's atmosphere.

GHGs are emitted by natural processes and human (anthropogenic) activities. Anthropogenic GHG emissions are primarily associated with: (1) the burning of fossil fuels during motorized transport,

electricity generation, natural gas consumption, industrial activity, manufacturing, and other activities; (2) deforestation; (3) agricultural activity; and (4) solid waste decomposition.

The temperature record shows a decades-long trend of warming, with 2018 ranked as the fourth warmest year on record with an increase of 1.5 degrees Fahrenheit compared to the 1951-1980 average. Globally, 2018's temperatures rank behind the three warmest years on record—2016, 2017 and 2015 (National Aeronautics and Space Administration [NASA] 2019). GHG emissions from human activities are the most significant driver of observed climate change since the mid-20th century (Intergovernmental Panel on Climate Change [IPCC] 2013). The IPCC constructed several emission trajectories of GHGs needed to stabilize global temperatures and climate change impacts. The statistical models show a "high confidence" that temperature increase caused by anthropogenic GHG emissions could be kept to less than two degrees Celsius relative to pre-industrial levels if atmospheric concentrations are stabilized at about 450 parts per million (ppm) carbon dioxide equivalent (CO_2e) by the year 2100 (IPCC 2014).

2.2.2 Types of Greenhouse Gases

The GHGs defined under California's AB 32 include carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6).

Carbon Dioxide. CO_2 is the most important and common anthropogenic GHG. CO_2 is an odorless, colorless GHG. Natural sources include the decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungi; evaporation from oceans; and volcanic outgassing. Anthropogenic sources of CO_2 include burning fuels, such as coal, oil, natural gas, and wood. Data from ice cores indicate that CO_2 concentrations remained steady prior to the current period for approximately 10,000 years. The atmospheric CO_2 concentration in 2010 was 390 ppm, 39 percent above the concentration at the start of the Industrial Revolution (approximately 280 ppm in 1750). As of May 2019, the CO_2 concentration exceeded 411 ppm, a 47 percent increase since 1750 (National Oceanic and Atmospheric Administration [NOAA], Earth System Research Laboratory 2019).

Methane. CH_4 is the main component of natural gas used in homes. A natural source of methane is from the decay of organic matter. Geological deposits known as natural gas fields contain methane, which is extracted for fuel. Other sources are from decay of organic material in landfills, fermentation of manure, and cattle digestion.

Nitrous Oxide. N_2O is produced by both natural and human-related sources. N_2O is emitted during agricultural and industrial activities, as well as during the combustion of fossil fuels and solid waste. Primary human-related sources of N_2O are agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuel, adipic (fatty) acid production, and nitric acid production.

Hydrofluorocarbons. Fluorocarbons are gases formed synthetically by replacing all hydrogen atoms in methane or ethane with chlorine and/or fluorine atoms. Chlorofluorocarbons (CFCs) are nontoxic, nonflammable, insoluble, and chemically nonreactive in the troposphere (the level of air at Earth's surface). CFCs were first synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. They destroy stratospheric ozone; therefore, their production was stopped as required by the 1989 Montreal Protocol.

Sulfur Hexafluoride. SF_6 is an inorganic, odorless, colorless, nontoxic, nonflammable gas. SF_6 is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semi-conductor manufacturing, and as a tracer gas for leak detection.

GHGs have long atmospheric lifetimes that range from one year to several thousand years. Long atmospheric lifetimes allow for GHG emissions to disperse around the globe. Because GHG emissions vary widely in the power of their climatic effects, climate scientists have established a unit called global warming potential (GWP). The GWP of a gas is a measure of both potency and lifespan in the atmosphere as compared to CO_2. For example, a gas with a GWP of 10 is 10 times more potent than CO_2 over 100 years. Because methane and N_2O are approximately 25 and 298 times more powerful than CO_2, respectively, in their ability to trap heat in the atmosphere, they have GWPs of 25 and 298, respectively (CO_2 has a GWP of 1). CO_2e is a quantity that enables all GHG emissions to be considered as a group despite their varying GWP. The GWP of each GHG is multiplied by the prevalence of that gas to produce CO_2e.

Historically, GHG emission inventories have been calculated using the GWPs from the IPCC's Second Assessment Report (SAR). In 2007, IPCC updated the GWP values based on the latest science at the time in its Fourth Assessment Report (AR4). The updated GWPs in the IPCC AR4 have begun to be used in recent GHG emissions inventories. In 2013, IPCC again updated the GWP values based on the latest science in its Fifth Assessment Report (AR5) (IPCC 2013). However, United Nations Framework Convention on Climate Change (UNFCCC) reporting guidelines for national inventories require the use of GWP values from the AR4. To comply with international reporting standards under the UNFCCC, official emission estimates for California and the U.S. are reported using AR4 GWP values. Therefore, statewide and national GHG inventories have not yet updated their GWP values to the AR5 values. By applying the GWP ratios, project-related CO_2e emissions can be tabulated in metric tons per year. Typically, the GWP ratio corresponding to the warming potential of CO_2 over a 100-year period is used as a baseline. The atmospheric lifetime and GWP of selected GHGs are summarized in Table 4, *Global Warming Potentials and Atmospheric Lifetimes*.

Table 4
GLOBAL WARMING POTENTIALS AND ATMOSPHERIC LIFETIMES

Greenhouse Gas	Atmospheric Lifetime (years)	Global Warming Potential (100-year Time Horizon)
Carbon Dioxide (CO_2)	50-200	1
Methane (CH_4)	12	25
Nitrous Oxide (N_2O)	114	298
HFC-134a	14	1,430
PFC: Tetraflouromethane (CF_4)	50,000	7,390
PFC: Hexafluoroethane (C_2F_6)	10,000	12,200
Sulfur Hexafluoride (SF_6)	3,200	22,800

Source: IPCC 2007
HFC: hydrofluorocarbon; PFC: perfluorocarbon

2.2.3 Federal Greenhouse Gas Regulations

2.2.3.1 Federal Clean Air Act

The U.S. Supreme Court ruled on April 2, 2007, in *Massachusetts v. U.S. Environmental Protection Agency* that CO_2 is an air pollutant, as defined under the CAA, and that the USEPA has the authority to regulate emissions of GHGs. The USEPA announced that GHGs (including CO_2, CH_4, N_2O, HFC, PFC, and SF_6) threaten the public health and welfare of the American people. This action was a prerequisite to finalizing the USEPA's GHG emissions standards for light-duty vehicles, which were jointly proposed by the USEPA and the United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA). The standards were established on April 1, 2010 for 2012 through 2016 model year vehicles and on October 15, 2012 for 2017 through 2025 model year vehicles (USEPA 2017b; USEPA and NHTSA 2012).

2.2.3.2 Light-Duty Vehicle Greenhouse Gas Emissions Standards and Corporate Average Fuel Economy Standards

The USEPA and the NHTSA have been working together on developing a national program of regulations to reduce GHG emissions and to improve fuel economy of light-duty vehicles. The USEPA is finalizing the first-ever national GHG emissions standards under the CAA, and the NHTSA is finalizing Corporate Average Fuel Economy (CAFE) standards under the Energy Policy and Conservation Act. On April 1, 2010, the USEPA and NHTSA announced a joint Final Rulemaking that established standards for 2012 through 2016 model year vehicles. This was followed up on October 15, 2012, when the agencies issued a Final Rulemaking with standards for model years 2017 through 2025. The rules required these vehicles to meet an estimated combined average emissions level of 250 grams per mile by 2016, decreasing to an average industry fleet-wide level of 163 grams per mile in model year 2025. The 2016 standard is equivalent to 35.5 miles per gallon (mpg), and the 2025 standard is equivalent to 54.5 mpg if the levels were achieved solely through improvements in fuel efficiency. The agencies expect, however, that a portion of these improvements will be made through improvements in air conditioning leakage and the use of alternative refrigerants that would not contribute to fuel economy. These standards would cut GHG emissions by an estimated 2 billion metric tons (MT) and 4 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2017–2025). The combined USEPA GHG emission standards and NHTSA CAFE standards resolve previously conflicting requirements under both federal programs and the standards of the State of California and other states that have adopted the California standards (USEPA 2017; USEPA and NHTSA 2012).

2.2.4 California Greenhouse Gas Regulations

2.2.4.1 California Code of Regulations, Title 24, Part 6

California Code of Regulations (CCR) Title 24 Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. Energy-efficient buildings require less electricity, natural gas, and other fuels. Electricity production from fossil fuels and on-site fuel combustion (typically for water heating) results in GHG emissions.

The Title 24 standards are updated approximately every three years to allow consideration and possible incorporation of new energy efficiency technologies and methods. The project would be required to

comply with the 2016 Title 24. The Energy Efficiency Standards are divided into three basic sets. First, there is a basic set of mandatory requirements that apply to all buildings. Second, there is a set of performance standards – the energy budgets – that vary by climate zone (of which there are 16 in California) and building type; thus, the Energy Efficiency Standards are tailored to local conditions. Finally, the third set constitutes an alternative to the performance standards, which is a set of prescriptive packages that comprise a checklist compliance approach.

2.2.4.2 California Green Building Standards Code

The CALGreen Building Standards Code (CCR Title 24, Part 11) is a code with mandatory requirements for new residential and nonresidential buildings throughout California. The development of CALGreen is intended to (1) cause a reduction in GHG emissions from buildings; (2) promote environmentally responsible, cost-effective, healthier places to live and work; (3) reduce energy and water consumption; and (4) respond to the directives by the Governor. In short, the code is established to reduce construction waste; make buildings more efficient in the use of materials and energy; and reduce environmental impact during and after construction.

CALGreen contains requirements for storm water control during construction; construction waste reduction; indoor water use reduction; material selection; natural resource conservation; site irrigation conservation; and more. The code provides for design options allowing the designer to determine how best to achieve compliance for a given site or building condition. The code also requires building commissioning, which is a process for the verification that all building systems, like heating and cooling equipment and lighting systems, are functioning at their maximum efficiency.

2.2.4.3 Executive Order S-3-05

On June 1, 2005, Executive Order (EO) S-3-05 proclaimed that California is vulnerable to climate change impacts. It declared that increased temperatures could reduce snowpack in the Sierra Nevada, further exacerbate California's air quality problems, and potentially cause a rise in sea levels. To avoid or reduce climate change impacts, EO S-3-05 calls for a reduction in GHG emissions to the year 2000 level by 2010, to year 1990 levels by 2020, and to 80 percent below 1990 levels by 2050.

2.2.4.4 Assembly Bill 32 – Global Warming Solution Act of 2006

The California Global Warming Solutions Act of 2006, widely known as AB 32, requires that CARB develop and enforce regulations for the reporting and verification of statewide GHG emissions. CARB is directed by AB 32 to set a GHG emission limit, based on 1990 levels, to be achieved by 2020. The bill requires CARB to adopt rules and regulations in an open public process to achieve the maximum technologically feasible and cost-effective GHG emission reductions.

2.2.4.5 Executive Order B-30-15

On April 29, 2015, EO B-30-15 established a California GHG emission reduction target of 40 percent below 1990 levels by 2030. The EO aligns California's GHG emission reduction targets with those of leading international governments, including the 28 nation European Union. California is on track to meet or exceed the target of reducing GHGs emissions to 1990 levels by 2020, as established in AB 32. California's new emission reduction target of 40 percent below 1990 levels by 2030 will make it possible to reach the goal established by EO S-3-05 of reducing emissions 80 percent under 1990 levels by 2050.

2.2.4.6 Senate Bill 32

Senate Bill (SB) 32 (Amendments to the California Global Warming Solutions Action of 2006) extends California's GHG reduction programs beyond 2020. SB 32 amended the Health and Safety Code to include Section 38566, which contains language to authorize CARB to achieve a statewide GHG emission reduction of at least 40 percent below 1990 levels by no later than December 31, 2030. SB 32 codified the targets established by EO B-30-15 for 2030, which set the next interim step in the State's continuing efforts to pursue the long-term target expressed in EO B-30-15 of 80 percent below 1990 emissions levels by 2050.

2.2.4.7 Assembly Bill 197

A condition of approval for SB 32 was the passage of AB 197. AB 197 requires that CARB consider the social costs of GHG emissions and prioritize direct reductions in GHG emissions at mobile sources and large stationary sources. AB 197 also gives the California legislature more oversight over CARB through the addition of two legislatively appointed members to the CARB Board and the establishment a legislative committee to make recommendations about CARB programs to the legislature.

2.2.4.8 Assembly Bill 1493 – Vehicular Emissions of Greenhouse Gases

AB 1493 (Pavley) requires that CARB develop and adopt regulations that achieve "the maximum feasible reduction of GHGs emitted by passenger vehicles and light-duty truck and other vehicles determined by CARB to be vehicles whose primary use is noncommercial personal transportation in the State." On September 24, 2009, CARB adopted amendments to the Pavley regulations that intend to reduce GHG emissions in new passenger vehicles from 2009 through 2016. The amendments bind California's enforcement of AB 1493 (starting in 2009), while providing vehicle manufacturers with new compliance flexibility. The amendments also prepare California to merge its rules with the federal CAFE rules for passenger vehicles (CARB 2013). In January 2012, CARB approved a new emissions-control program for model years 2017 through 2025. The program combines the control of smog, soot, and global warming gases and requirements for greater numbers of zero-emission vehicles into a single packet of standards called Advanced Clean Cars (CARB 2013).

2.2.4.9 Assembly Bill 341

The state legislature enacted AB 341 (California Public Resource Code Section 42649.2), increasing the diversion target to 75 percent statewide. AB 341 requires all businesses and public entities that generate 4 cubic yards or more of waste per week to have a recycling program in place. The final regulation was approved by the Office of Administrative Law on May 7, 2012 and went into effect on July 1, 2012.

2.2.4.10 Executive Order S-01-07

This EO, signed by Governor Schwarzenegger on January 18, 2007, directs that a statewide goal be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by the year 2020. It orders that a Low Carbon Fuel Standard (LCFS) for transportation fuels be established for California and directs CARB to determine whether a LCFS can be adopted as a discrete early action measure pursuant to AB 32. CARB approved the LCFS as a discrete early action item with a regulation adopted and implemented in April 2010. Although challenged in 2011, the Ninth Circuit reversed the District Court's opinion and rejected arguments that implementing LCFS violates the interstate commerce clause in September 2013. CARB is therefore continuing to implement the LCFS statewide.

2.2.4.11 Senate Bill 350

Approved by Governor Brown on October 7, 2015, SB 350 increases California's renewable electricity procurement goal from 33 percent by 2020 to 50 percent by 2030. This will increase the use of Renewables Portfolio Standard eligible resources, including solar, wind, biomass, and geothermal. In addition, large utilities are required to develop and submit Integrated Resource Plans to detail how each entity will meet their customers resource needs, reduce GHG emissions, and increase the use of clean energy.

2.2.4.12 Senate Bill 375

SB 375 aligns regional transportation planning efforts, regional GHG reduction targets, and affordable housing allocations. Metropolitan Planning Organizations (MPOs) are required to adopt a Sustainable Communities Strategy (SCS), which allocates land uses in the MPOs' Regional Transportation Plan (RTP). Qualified projects consistent with an approved SCS or Alternative Planning Strategy categorized as "transit priority projects" would receive incentives to streamline CEQA processing.

2.2.4.13 Senate Bill 100

Approved by Governor Brown on September 10, 2018, SB 100 extends the renewable electricity procurement goals and requirements of SB 350. SB 100 requires that all retail sale of electricity to California end-use customers be procured from 100 percent eligible renewable energy resources and zero-carbon resources by the end of 2045.

2.2.4.14 California Air Resources Board: Climate Change Scoping Plan

On December 11, 2008, the CARB adopted the Climate Change Scoping Plan (Scoping Plan; CARB 2008) as directed by AB 32. The Scoping Plan proposes a set of actions designed to reduce overall GHG emissions in California to the levels required by AB 32. Measures applicable to development projects include those related to energy-efficiency building and appliance standards, the use of renewable sources for electricity generation, regional transportation targets, and green building strategy. Relative to transportation, the Scoping Plan includes nine measures or recommended actions related to reducing VMT and vehicle GHGs through fuel and efficiency measures. These measures would be implemented statewide rather than on a project-by-project basis.

In response to EO B-30-15 and SB 32, all state agencies with jurisdiction over sources of GHG emissions were directed to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 targets. CARB was directed to update the Scoping Plan to reflect the 2030 target (CARB 2014). The mid-term target is critical to help frame the suite of policy measures, regulations, planning efforts, and investments in clean technologies and infrastructure needed to continue driving down emissions. In December 2017, CARB adopted the *2017 Climate Change Scoping Plan Update, the Strategy for Achieving California's 2030 Greenhouse Gas Target,* to reflect the 2030 target set by EO B-30-15 and codified by SB 32 (CARB 2017a).

2.2.5 Local Regulations

The City adopted a Climate Action Plan (CAP) on December 4, 2013. The CAP establishes goals and policies that incorporate environmental responsibility into its daily management of residential, commercial and industrial growth, education, energy and water use, air quality, transportation, waste

reduction, economic development, and open space and natural habitats (City 2013a). The CAP includes measures to reduce GHG emissions from community-wide water use that would be applicable to the project, including R2-W2, *Water Conservation Strategies*, and R2-W3, *Increased Recycled Water Use*. The 2013 CAP is currently being updated to extend the GHG emission reduction targets to 2030 in compliance with SB 32.

3.0 EXISTING CONDITIONS

3.1 CLIMATE AND METEOROLOGY

The climate in southern California, including the SDAB, is controlled largely by the strength and position of the subtropical high-pressure cell over the Pacific Ocean. Areas within 30 miles of the coast experience moderate temperatures and comfortable humidity.

The predominant wind direction in the vicinity of the project is from the west and the average wind speed is approximately 6 miles per hour (mph; Iowa Environmental Mesonet [IEM] 2018). The annual average maximum temperature in the project area is approximately 77 degrees Fahrenheit (°F), and the average minimum temperature is approximately 52°F. Total precipitation in the project area averaged approximately 14.9 inches between 1979 and 2013. Precipitation occurs mostly during the winter and relatively infrequently during the summer (Western Regional Climate Center [WRCC] 2019).

Due to its climate, the SDAB experiences frequent temperature inversions (temperature increases as altitude increases, which is the opposite of general patterns). Temperature inversions prevent air close to the ground from mixing with the air above it. As a result, air pollutants are trapped near the ground. During the summer, air quality problems are created due to the interaction between the ocean surface and the lower layer of the atmosphere, creating a moist marine layer. An upper layer of warm air mass forms over the cool marine layer, preventing air pollutants from dispersing upward. Additionally, hydrocarbons and NO_2 react under strong sunlight, creating smog. Light, daytime winds, predominantly from the west, further aggravate the condition by driving the air pollutants inland, toward the foothills. During the fall and winter, air quality problems are created due to CO and NO_2 emissions. High NO_2 levels usually occur during autumn or winter, on days with summer-like conditions.

3.2 EXISTING AIR QUALITY

3.2.1 Existing Criteria Pollutants

3.2.1.1 Attainment Designations

Attainment designations are discussed in subsection 2.1 and Table 3. The SDAB is classified as a moderate nonattainment area for the 8-hour NAAQS for ozone. The SDAB is currently classified as a nonattainment area under the CAAQS for ozone, PM_{10}, and $PM_{2.5}$. The SDAB is an attainment (maintenance) area for CO, and an attainment area or unclassified for all other criteria pollutants.

3.2.1.2 Monitored Air Quality

The SDAPCD operates a network of ambient air monitoring stations throughout the County. The purpose of the monitoring stations is to measure ambient concentrations of the pollutants and determine whether the ambient air quality meets the CAAQS and the NAAQS. The nearest monitoring station to

the project site with similar climatic conditions is the San Diego Kearny Villa Road monitoring station, approximately 19 miles south of the project site. Table 5, *Air Quality Monitoring Data*, presents a summary of the ambient pollutant concentrations monitored at the San Diego Kearny Villa Road air quality monitoring stations during the last three years (2016 through 2018).

Table 5
AIR QUALITY MONITORING DATA

Pollutant Standards	2016	2017	2018
Ozone (O_3)			
Maximum concentration 1-hour period (ppm)	0.087	0.097	0.107
Maximum concentration 8-hour period (ppm)	0.075	0.083	0.077
Days above 1-hour state standard (>0.09 ppm)	0	2	1
Days above 8-hour state/federal standard (>0.070 ppm)	3	6	5
Nitrogen Dioxide (NO_2)			
Maximum 1-hour concentration (ppm)	0.053	0.054	0.045
Days above state 1-hour standard (0.18 ppm)	0	0	0
Days above federal 1-hour standard (0.100 ppm)	0	0	0
Annual average (ppm)	0.009	0.009	0.006
Exceed annual federal standard (0.053 ppm)	No	No	No
Exceed annual state standard (0.030 ppm)	No	No	No
Suspended Particulates (PM_{10})			
Maximum 24-hour concentration (µg/m^3)	35.0	47.0	38.0
Measured Days above 24-hr state standard (>50 µg/m^3)	0	0	0
Measured Days above 24-hr federal standard (>150 µg/m^3)	0	0	0
Annual average (µg/m^3)	*	17.6	18.4
Exceed state annual standard (20 µg/m^3)	*	Yes	Yes
Suspended Particulates ($PM_{2.5}$)			
Maximum 24-hour concentration (µg/m^3)	20.3	27.5	32.2
Days above 24-hour federal standard (>35 µg/m^3)	0	0	0
Annual average (µg/m^3)	7.8	8.0	8.3
Exceed state and federal annual standard (12 µg/m^3)	No	No	No

Source: CARB 2018b. Data collected at San Diego – Kearny Villa Road air quality monitoring station.
ppm = parts per million; µg/m^3 = micrograms per cubic meter; * = insufficient data

As shown in Table 5, monitoring data at the San Diego – Kearny Villa Road station showed acceptable levels of the criteria air pollutants NO_2, PM_{10}, and $PM_{2.5}$ for from 2016 to 2018. Violations of the state and federal 8-hour standards for ozone occurred on multiple days throughout the sample period. The annual average PM_{10} standard was exceed in 2017 and 2018.

3.2.2 Existing GHG Emissions

In an effort to evaluate and reduce the potential adverse impact of global climate change, international, state, and local organizations have conducted GHG inventories to estimate their levels of GHG emissions and removals. The following summarizes the results of these global, national, state, and local GHG inventories.

For 2012, total GHG emissions worldwide were estimated at 46,049 MMT CO_2e (World Resources Institute 2017). The U.S. contributed the second largest portion of GHG emissions (behind China) at 12 percent of global emissions, with 5,823 MMT CO_2e in 2012. On a national level in 2013,

approximately 27 percent of GHG emissions are associated with transportation and about 31 percent are associated with electricity generation (USEPA 2015).

CARB performs statewide GHG inventories. The inventory is divided into six broad sectors; agriculture and forestry, commercial, electricity generation, industrial, residential, and transportation. Emissions are quantified in MMT CO_2e. Table 6, *California Greenhouse Gas Emissions by Sector*, shows the estimated statewide GHG emissions for the years 1990, 2000, 2010, and 2015.

Table 6
CALIFORNIA GREENHOUSE GAS EMISSIONS BY SECTOR

Sector	Emissions (MMT CO_2e)			
	1990	2000	2010	2015
Agriculture and Forestry	18.9 (4%)	32.0 (7%)	34.6 (8%)	34.7 (8%)
Commercial	14.4 (3%)	14.3 (3%)	20.1 (5%)	22.2 (5%)
Electricity Generation	110.5 (26%)	105.4 (23%)	90.6 (20%)	84.1 (19%)
Industrial	105.3 (24%)	104.6 (22%)	101.1 (23%)	103.0 (23%)
Residential	29.7 (7%)	31.2 (7%)	31.3 (7%)	26.9 (6%)
Transportation	150.6 (35%)	179.5 (38%)	168.1 (38%)	169.4 (38%)
Unspecified Remaining	1.3 (<1%)	0.4 (<1%)	0.3 (<1%)	0.2 (<1%)
Total	**433.3**	**467.2**	**446.1**	**440.4**

Source: CARB 2007 and CARB 2017b
MMT = million metric tons; CO_2e = carbon dioxide equivalent

As shown in Table 6, statewide GHG emissions totaled 433 MMT CO_2e in 1990, 469 MMT CO2e in 2000, 456 MMT CO_2e in 2010, and 440 MMT CO_2e in 2015. Transportation-related emissions consistently contribute the most GHG emissions, followed by electricity generation and industrial emissions.

The City of Escondido CAP provides a community-wide GHG emissions inventory by sector for the year 2010, as shown in Table 7, *City of Escondido Greenhouse Gas Emissions by Sector* (City 2013a).

Table 7
CITY OF ESCONDIDO GREENHOUSE GAS EMISSIONS BY SECTOR

Sector	2010 (MT CO_2e)
Energy	395,565 (44.6%)
Transportation	368,622 (41.6%)
Area Sources	52,559 (5.9%)
Solid Waste	41,724 (4.7%)
Water and Wastewater	25,360 (2.9%)
Construction	2,288 (0.3%)
TOTAL	**886,118**

Source: City 2013a
MT = metric tons; CO_2e = carbon dioxide equivalent

Unlike the state inventory, energy was the largest source of GHGs in Escondido, followed by transportation sources.

3.3 SENSITIVE RECEPTORS

CARB and the Office of Environmental Health Hazard Assessment (OEHHA) have identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, infants (including in utero in the third trimester of pregnancy), and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis (CARB 2005, OEHHA 2015). Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved and are referred to as sensitive receptors. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers.

The closest existing sensitive receptors to the project site are single-family residences approximately 2,000 feet (0.38 mile) to the south. The closest existing sensitive receptors to the proposed pipeline construction area on Washington Avenue are multi-family residential buildings at the intersection of Washington Avenue and Centre City Parkway, and multi-family residential buildings at the intersection of Washington Avenue and Waverly Place.

4.0 METHODOLOGY AND SIGNIFICANCE CRITERIA

4.1 METHODOLOGY

Criteria pollutant and precursor and GHG emissions for project construction and operation were calculated using the California Emissions Estimator Model (CalEEMod), Version 2016.3.2. CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and GHG emissions associated with both construction and operations from a variety of land use projects. The model was developed for CAPCOA in collaboration with the California air districts. CalEEMod allows for the use of default data (e.g., emission factors, trip lengths, meteorology, source inventory) provided by the various California air districts to account for local requirements and conditions, and/or user-defined inputs. The calculation methodology and input data used in CalEEMod can be found in the CalEEMod User's Guide Appendices A, D, and E (CAPCOA 2017). The input data and subsequent construction and operation emission estimates for the proposed project are discussed below. CalEEMod output files for the project are included in Appendix A to this report.

4.1.1 Construction Emissions

As described above, construction emissions were estimated using CalEEMod. The model uses OFFROAD2011 and EMFAC2014 emission factors from CARB's models for off-road equipment and on-road vehicles, respectively. The construction analysis included modeling of the projected construction equipment that would be used during each construction activity and quantities of earth and debris to be moved. The model calculates emissions of CO, PM_{10}, $PM_{2.5}$, SO_2, the ozone precursors ROG and NO_X, and the GHGs CO_2, CH4 and N_2O (as well as the total CO_2e).

Construction input data for CalEEMod include, but are not limited to, (1) the anticipated start and finish dates of construction activity; (2) inventories of construction equipment to be used; (3) areas to be excavated and graded; and (4) volumes of materials to be exported from and imported to the project area. The analysis assessed total annual emissions from individual construction activities, including demolition, building improvements, outdoor improvements, paving, and architectural coatings.

Construction equipment estimates are based CalEEMod defaults, adjusted for anticipated project-specific site improvement activities. Table 8, *Construction Equipment Assumptions*, presents a summary of the assumed equipment that would be involved in each phase of construction.

Table 8
CONSTRUCTION EQUIPMENT ASSUMPTIONS

Construction Phase	Equipment	Number
Demolition	Concrete/Industrial Saws	1
	Excavators	1
	Rubber Tired Dozers	1
	Rubber Tired Loaders	1
Site Preparation/Grading	Graders	1
	Rubber Tired Dozers	1
	Rubber Tired Loaders	1

Source: CalEEMod
Note: Output data, including equipment horsepower, is provided in Appendix A

The construction schedule was based on CalEEMod default, adjusted to fit within the estimated overall construction schedule provided by the project architect. The estimated start date would be approximately July 1, 2020. As shown in Table 9, *Anticipated Construction Schedule*, project development would be complete by approximately June 28, 2022.

Table 9
ANTICIPATED CONSTRUCTION SCHEDULE

Construction Activity	Construction Period		
	Start	End	Number of Working Days
Demolition	7/1/2020	7/28/2020	20
Site Preparation/Grading	7/29/2020	9/8/2020	30
Pipeline Excavation and Construction	9/9/2020	2/9/2021	110
Architectural Coating	2/10/2021	3/5/2021	18
Building Construction	3/6/2021	4/29/2022	300
Paving	4/30/2022	5/25/2022	18
Architectural Coating	5/26/2022	6/28/2022	24

Source: CalEEMod
Note: Output data is provided in Appendix A.

The quantity, duration, and the intensity of construction activity influence the amount of construction emissions and their related pollutant concentrations that occur at any one time. As such, the emission forecasts provided herein reflect a specific set of conservative assumptions based on the expected construction scenario wherein a relatively large amount of construction is occurring in a relatively intensive manner. Because of this conservative assumption, actual emissions could be less than those forecasted. If construction is delayed or occurs over a longer time period, emissions could be reduced because of (1) a more modern and cleaner-burning construction equipment fleet mix than assumed in the CalEEMod, and/or (2) a less intensive buildout schedule (i.e., fewer daily emissions occurring over a longer time interval). A complete listing of the assumptions used in the analysis and model output is provided in Appendix A of this report.

CalEEMod has the capability to calculate reductions in construction emissions from the effects of dust control, diesel-engine classifications, and other selected emissions reduction measures. Emissions calculations assume application of water on all exposed areas during construction in compliance with SDAPCD Rule 55, *Fugitive Dust Control*. Based on CalEEMod version 2016.3.2, the control efficiency for watering two times per day is 55 percent.

4.1.2 Operation Emissions

Operational impacts were estimated using CalEEMod, as discussed above. Model output data sheets are included in Appendix A. Modeled operational sources of pollutant emissions include area, energy, mobile (transportation), solid waste, stationary equipment, and water and wastewater. The sources and assumption used in the modeling are described below.

Area Sources – Operational emissions from area sources include engine emissions from landscape maintenance equipment, ROG emissions from repainting of buildings and tanks, and the use of consumer products such as degreasers. CalEEMod default values were used for area sources.

Energy Sources – Operational emissions of criteria pollutants from energy sources include the use of natural gas for hot water and office heat. The CalEEMod default values for natural gas use for the project's office spaces were used. The project use of electricity would result in off-site emissions of GHGs. Electricity use was estimated using the CalEEMod default emissions factor for wastewater treatment facilities of 1,911 kilowatt-hour (KWh) per day per million gallons of water treated, and the

CalEEMod default emissions factor for water delivery of 1,272 KWh per day per million gallons of water delivered (pumped). The electricity use would be dependent on the annual average product water production (between the minimum capacity of 0.5 mgd and maximum capacity of 2.0 mgd). Production of product water would vary throughout the year depending on the demand; however, this analysis conservatively assumes the MFRO facility would operate at 75 percent of maximum capacity (1.5 mgd), 365 days per year.

Mobile Sources – Operational emissions from mobile sources are associated with project-related vehicle trip generation and trip length. The projects trip generation was estimated assuming one full-time employee at the site (2 average daily trips [ADT]trips); five employees visiting the site for maintenance activities on 36 days per year (1.38 ADT); and nine monthly chemical deliveries (0.83 ADT). The total project trip generation would be approximately 4.21 ADT. To capture emissions from the maximum anticipated daily trips, a model was run assuming 2 trips for the fulltime employee, 10 trips for five maintenance personnel, and 2 trips for a chemical delivery, all occurring on the same day for a total of 12 one-way daily trips. The CalEEMod default trip distances were used. The fleet mix was assumed to be: 60 percent cars and 10 percent light trucks for employee commutes; 10 percent medium duty trucks for facility maintenance; and 20 percent heavy duty trucks for facility maintenance and chemical deliveries.

Solid Waste – Operational emissions of GHGs from solid waste sources are associated with emissions from the decomposition of waste in landfills. The CalEEMod default values for solid waste for the office space was used. For the MFRO facility, an estimated 5 tons per year would be generated from maintenance and cleaning activities.

Stationary Equipment – Operation emissions from stationary sources would be from the use of the proposed diesel-powered standby generator. A 1,750-kilowatt, 480-volt generator would require an engine of approximately 2,400 horsepower. The standby generator was assumed to operate monthly for maintenance and testing for a maximum of 4 hours on any one day and a total of approximately 16 hours per year.

Water and Wastewater – Operation emissions of GHGs would result from the use of water and generation of wastewater. CalEEMod defaults were utilized for the office space indoor water (assumed to become waste water) use and landscaping outdoor water use. The MFRO was assumed to require approximately 10,000 gallons per year of treated water for maintenance and cleaning.

4.2 SIGNIFICANCE CRITERIA

4.2.1 Air Quality

The following significance thresholds are based on Appendix G of the State CEQA Guidelines. A significant impact is identified if the project would result in any of the following:

(1) Conflict with or obstruct implementation of the applicable air quality plan; or

(2) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard; or

(3) Expose sensitive receptors to substantial pollutant concentrations; or

(4) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

To determine whether a project would (a) result in emissions that would violate any air quality standard or contribute substantially to an existing or projected air quality violation, or (b) result in a cumulatively considerable net increase of PM_{10} or exceed quantitative thresholds for ozone precursors (i.e., NO_X and VOCs), project emissions may be evaluated based on the quantitative emission thresholds established by the City. In the City Municipal Code Chapter 33, Article 47, Section 33-924, *Coordination of CEQA, quality of life standards, and growth management provisions*, the City has adopted thresholds based on the SDAPCD adopted thresholds (City 2019).

For CEQA purposes, these screening criteria can be used as numeric methods to demonstrate that a project's total emissions would not result in a significant impact to air quality. The screening thresholds are included in Table 10, *Screening-level Thresholds for Air Quality Impact Analyses*.

Table 10
SCREENING-LEVEL THRESHOLDS FOR AIR QUALITY IMPACT ANALYSES

Pollutant	Total Emissions		
Construction Emissions (Pounds per Day)			
Respirable Particulate Matter (PM_{10})	100		
Fine Particulate Matter ($PM_{2.5}$)	55		
Oxides of Nitrogen (NO_X)	250		
Oxides of Sulfur (SO_X)	250		
Carbon Monoxide (CO)	550		
Volatile Organic Compounds (VOCs)	75		
Operational Emissions			
	Pounds per Hour	**Pounds per Day**	**Tons per Year**
Respirable Particulate Matter (PM_{10})	---	100	15
Fine Particulate Matter ($PM_{2.5}$)	---	55	10
Oxides of Nitrogen (NO_X)	25	250	40
Oxides of Sulfur (SO_X)	25	250	40
Carbon Monoxide (CO)	100	550	100
Lead and Lead Compounds	---	3.2	0.6
Volatile Organic Compounds (VOC)	---	75	13.7
Toxic Air Contaminant Emissions			
Excess Cancer Risk	1 in 1 million 10 in 1 million with T-BACT		
Non-Cancer Hazard	1.0		

Source: City of Escondido 2019
T-BACT = Toxics-Best Available Control Technology

The State of California Health and Safety Code Sections 41700 and 41705, and SDAPCD Rule 51, commonly referred to as public nuisance law, prohibits emissions from any source whatsoever in such quantities of air contaminants or other material, which cause injury, detriment, nuisance, or annoyance to the public health or damage to property. The provisions of these regulations do not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals. It is generally accepted that the considerable number of persons requirement in Rule 51 is normally satisfied when 10 different individuals/households have made separate complaints within

90 days. Therefore, odor complaints from a "considerable" number of persons or businesses in the area would be considered a significant, adverse odor impact.

4.2.2 GHG Emissions

The following significance thresholds are based on Appendix G of the State CEQA Guidelines. A significant impact is identified if the project would result in any of the following:

(1) Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

(2) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs?

The City of Escondido Municipal Code Chapter 33, Article 47, Section 33-924, *Coordination of CEQA, quality of life standards, and growth management provisions,* has established that project's that do not generate more than 2,500 MT CO_2e per year would have GHG emissions that would not be considered significant. Projects which generate more than 2,500 MT CO_2e per year would either require an analysis of the reduction measures outlined in the Escondido CAP screening table and an achievement of 100 points, or a reduction in the project's GHG emissions below the 2,500 MT CO_2e per year threshold through mitigation and/or project design features (City 2019; City 2013b).

The City's GHG threshold established in the municipal code and the CAP was developed to meet the year 2020 statewide GHG emissions targets as mandated by AB 32 and implemented by the CARB Scoping Plan. The City has not adopted guidance or revised thresholds to account for GHG reduction targets beyond 2020. Accordingly, a threshold reduced by 4.98 percent for each year between 2020 and 2030 would meet the mandates of SB 32. The first full year of operation for the project is anticipated to be 2023. Therefore, a threshold 14.21 percent below the City's threshold of 2,500 MT CO_2e per year (or 2,145 MT CO_2e per year) is used in this analysis.

4.2.3 General Conformity

The City is seeking financing from the SWRCB Clean Water SRF Program for the project. Because the SRF Program is partially funded by the federal government, the project requires compliance not only with the CEQA, but also with the federal CAA. As such, the air quality analysis has been conducted to satisfy General Conformity requirements.

The USEPA General Conformity Rule applies to non-transportation federal actions occurring in nonattainment or maintenance areas when the total direct and indirect emissions of nonattainment pollutants (or their precursors) exceed specified thresholds. The emissions thresholds that trigger requirements for a conformity analysis are called *de minimis* levels. *De minimis* levels (in tons per year [tpy]) vary by pollutant and also depend on the severity of the nonattainment status for the air quality management area in question.

A conformity applicability analysis is the first step of a conformity evaluation and assesses if a federal action must be supported by a conformity determination. This is typically done by quantifying applicable direct and indirect emissions that are projected to result due to implementation of the federal action. Indirect emissions are those emissions caused by the federal action and originating in the region of interest, but which can occur at a later time or in a different location from the action itself and are

reasonably foreseeable. Reasonably foreseeable emissions are projected for future direct and indirect emissions that are identified at the time the conformity evaluation is performed. If the results of the applicability analysis indicate that the total emissions would not exceed the *de minimis* emissions thresholds, then the conformity evaluation process is completed. *De minimis* threshold emissions are presented in Table 11, *General Conformity De Minimis Levels for SDAB*. The thresholds used for the general conformity analysis for this project are 100 tons per year for VOCs, 100 tons per year for NO_X, and 100 tons per year for CO, as the SDAB is classified as a moderate nonattainment area for the 8-hour NAAQS for ozone and a maintenance area for CO.

Table 11
GENERAL CONFORMITY DE MINIMIS LEVELS FOR SDAB

Pollutant	Area Type	Tons per Year
Ozone (NO_X)	Marginal and moderate nonattainment outside an ozone transport region	100
Ozone (VOC)	Marginal and moderate nonattainment outside an ozone transport region	100
CO	Maintenance Areas	100

Source: 40 CFR 93.153(b)
NO_X = nitrogen oxides; VOC = volatile organic compound; CO = carbon monoxide

5.0 AIR QUALITY IMPACT ANALYSIS

This section evaluates potential direct impacts of the proposed project related to the air pollutant emissions. Project-level air quality modeling was completed as part of this analysis. Complete modeling results are included as Appendix A of this report.

5.1 CONSISTENCY WITH AIR QUALITY PLANS

Would the project conflict with or obstruct implementation of the applicable air quality plan?

The SDAPCD is required, pursuant to the federal CAA, to reduce emissions of criteria pollutants for which the SDAB is in nonattainment. Strategies to achieve these emissions reductions are developed in the RAQS and SIP, prepared by the SDAPCD for the region. Both the RAQS and SIP are based on SANDAG population projections, as well as land use designations and population projections included in general plans for those communities located within the County. Population growth is typically associated with the construction of residential units or large employment centers.

A project would be inconsistent with the RAQS/SIP if it results in population and/or employment growth that exceed growth estimates for the area. The purpose of the project is to implement the City's MFRO Facility to increase treated water for agricultural uses and to reduce the City's treated water ocean outfall. Implementing the project would not result in population growth beyond estimates for the area. In addition, construction and maintenance jobs for the project would likely recruit from the local pool of labor and would not create conditions for employment growth that exceeds growth estimates for the area.

Because the project would not generate population and employment growth beyond the levels assumed for the region, the project would not conflict with population projections for the region and would,

therefore, be consistent with the RAQS/SIP. In addition, the project would comply with all existing and new rules and regulations as they are implemented by the SDAPCD, CARB, and/or USEPA related to emissions generated during construction and operation. Furthermore, as demonstrated in subsection 5.2, below, the project would not result in emissions in excess of the City's thresholds, which are designed to achieve/maintain air quality attainment for the NAAQS and CAAQS. Therefore, the project would not conflict with or obstruct implementation of the applicable air quality plan and the impact would be less than significant.

5.2 CONFORMANCE TO FEDERAL AND STATE AIR QUALITY STANDARDS

Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

The project would generate criteria pollutants in the short-term during construction and the long-term during operation. To determine whether a project would result in emissions that would violate an air quality standard or contribute substantially to an existing or projected air quality violation, a project's emissions are evaluated based on the quantitative emission thresholds established by the SDAPCD.

5.2.1 Construction

Construction of the project would result in temporary increases in air pollutant emissions. These emissions would be generated in the form of fugitive dust emissions (PM_{10} and $PM_{2.5}$) and ozone precursor emissions (NO_X and ROG). The project's construction emissions were estimated using CalEEMod as described in subsection 4.1. Additional details of phasing, selection of construction equipment, and other input parameters, including CalEEMod data, are included in Appendix A.

The results of the calculations for project construction are shown in Table 12, *Construction Emissions*. The data are presented as the maximum anticipated daily emissions for comparison with the thresholds.

Table 12
CONSTRUCTION EMISSIONS

Year	Maximum Daily Pollutant Emissions (pounds per day)					
	ROG	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
2020	2.9	38.4	17.2	<0.1	5.0	3.0
2021	2.4	21.6	20.1	<0.1	1.8	1.2
2022	45.8	29.0	19.7	<0.1	2.3	1.5
Maximum Daily Emissions	**45.8**	**38.4**	**19.7**	**<0.1**	**5.0**	**3.0**
Threshold	*75*	*250*	*550*	*250*	*100*	*55*
Significant Impact?	***No***	***No***	***No***	***No***	***No***	***No***

Source: CalEEMod (output data is provided in Appendix A)
ROG = reactive organic gas; NO_X = nitrogen oxides; CO = carbon monoxide; SO_X = sulfur oxides;
PM_{10} = particulate matter 10 microns in diameter; $PM_{2.5}$ = particulate matter 2.5 microns in diameter

As shown in Table 12, emissions of criteria pollutants and precursors related to project construction would be below the significance thresholds. Therefore, impacts from criteria pollutants and precursors generated during construction would be less than significant and no mitigation would be required.

5.2.2 Operation

The project's operational emissions were estimated using CalEEMod as described in subsection 4.1. Operational emission calculations and model outputs are provided in Appendix A. Table 13, *Operational Criteria Pollutant and Precursor Emissions*, presents the summary of operational emissions for the project.

Table 13
OPERATIONAL CRITERIA POLLUTANT AND PRECURSOR EMISSIONS

Category	Pollutant Emissions (pounds per day)					
	ROG	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Area	1.3	<0.1	<0.1	<0.1	<0.1	<0.1
Energy	<0.1	<0.1	<0.1	<0.1	<0.1	<0.1
Mobile	<0.1	0.3	0.2	<0.1	<0.1	<0.1
Stationary	3.0	47.9	16.1	<0.1	0.9	0.9
Total Daily Emissions[1]	**4.3**	**48.2**	**16.4**	**<0.1**	**1.0**	**0.9**
Threshold	*75*	*250*	*550*	*250*	*100*	*55*
Significant Impact?	***No***	***No***	***No***	***No***	***No***	***No***

Source: CalEEMod (output data is provided in Appendix A)
[1] Totals may not sum due to rounding.
ROG = reactive organic gas; NO_X = nitrogen oxides; CO = carbon monoxide; SO_X = sulfur oxides;
PM_{10} = particulate matter 10 microns in diameter; $PM_{2.5}$ = particulate matter 2.5 microns in diameter

As shown in Table 13, emissions of criteria pollutants and precursors during long-term operation of the project would not exceed the daily thresholds. Therefore, impacts from criteria pollutants generated during project operation would be less than significant and no mitigation would be required.

5.3 IMPACTS TO SENSITIVE RECEPTORS

Would the project expose sensitive receptors to substantial pollutant concentrations?

5.3.1 Construction Activities

5.3.1.1 Toxic Air Contaminants

Project construction would generate DPM emissions from the use of off-road diesel equipment required for demolition, site grading, excavation, and other construction activities. DPM is the primary toxic air contaminant that would be emitted during construction. Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer. The amount to which the receptors could be exposed, which is a function of concentration and duration of exposure, is the primary factor used to determine health risk. The generation of TAC emissions during construction would be variable and sporadic due to the nature of construction activity. The most intense use of construction equipment would be during the site preparation/grading phase which is anticipated to last 30 working days and the entire project construction period is anticipated to last 24 months. As discussed in subsection 3.3, the closest sensitive receptors to the project site are approximately 2,000 feet (0.38 mile) south of the project site. Excavation for and construction of the product water pipeline would occur on Washington Avenue and Waverly Place, as shown in Figure 2. There are existing multi-family residential buildings within 40 feet of Washington Avenue. Construction

activities for the product water pipeline would proceed linearly, with heavy equipment only operating in any one location for a few days before moving on. Therefore, due to the short duration and intermittent nature of construction activities, and due to the highly dispersive properties of DPM, project-related TAC emission impacts during construction would not expose sensitive receptors to substantial pollutant concentrations and the impact would be less than significant, no mitigation is required.

5.3.2 Operational Activities

5.3.2.1 Standby Generator

The proposed diesel-powered standby generator would be a source of DPM emissions. As discussed in subsection 3.3, the closest sensitive receptors to the project site are approximately 2,000 feet (0.38 mile) south of the project site. In addition, the generator would be required to be fitted with DPM reduction technology in compliance with applicable state ATCMs, and/or federal NSPS and NESHAP, and applicable SDAPCD regulations, including Rule 69.4.1, Stationary Reciprocating Internal Combustion Engines – Best Available Retrofit Control Technology. Therefore, due to the limited use of the standby generator, the distance to the nearest sensitive receptors, and the implementation of DPM reduction technology, the proposed standby generator would not expose sensitive receptors to substantial pollutant concentrations and the impact would be less than significant, no mitigation is required.

5.3.2.2 CO Hotspots

Vehicle exhaust is the primary source of CO in California. In an urban setting, the highest CO concentrations are generally found in close proximity to congested intersections. Under typical meteorological conditions, CO concentrations tend to decrease as distance from the emissions source (i.e., congested intersection) increases. Project-generated traffic has the potential of contributing to localized "hot spots" of CO off-site. Because CO is a byproduct of incomplete combustion, exhaust emissions are worse when fossil-fueled vehicles are operated inefficiently, such as in stop-and-go traffic or through heavily congested intersections, where the level of service (LOS[2]) is severely degraded. A quantitative screening for CO hotspots would be required in two instances: (1) if a project increases the average delay at signalized intersections operating at Level of Service (LOS) E or F; or (2) if a project causes an intersection that would operate at LOS D or better without the project to operate at LOS E or F with the project.

SANDAG's Transportation Forecast Information Center website includes estimates of traffic volumes along Washington Avenue for the year 2020 (SANDAG 2013). Near the project site, the forecast volumes for Washington Avenue range from 6,800 ADT to 13,100 ADT. The peak increase in daily trips associated with daily operation of all project components would be nominal compared to these traffic volumes (approximately 12 additional trips per day on Washington Avenue). Therefore, the project would neither cause new severe congestion nor significantly worsen existing congestion. There would be no potential for a CO hotspot or exposure of sensitive receptors to substantial, project-generated, local CO emissions. The impact would be less than significant.

[2] Level of service (LOS) is a measure used by traffic engineers to determine the effectiveness of transportation infrastructure. Level of service is most commonly used to analyze intersections by categorizing traffic flow with corresponding safe driving conditions. LOS A is considered the most efficient level of service and LOS F the least efficient.

5.4 OTHER EMISSIONS

Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Implementation of the project would have the potential to generate objectionable odors through construction activities and during operation, as discussed below.

5.4.1 Construction

CARB's Air Quality and Land Use Handbook includes a list of the most common sources of odor complaints received by local air districts. Typical sources of odor complaints include facilities such as sewage treatment plants, landfills, recycling facilities, petroleum refineries, and livestock operations. Construction activities are not a typical source of nuisance odors, although construction could result in minor amounts of odorous compounds associated with diesel heavy equipment exhaust or evaporation of volatile compounds within paint or other coatings. The smell of diesel exhaust is due in most part to the presence of sulfur and the creation of hydrocarbons during combustion (Nett Technologies 2018). As shown in Table 12, construction emissions would not result in significant emissions of sulfur oxides. Additionally, construction equipment associated with the project would be operating at various locations throughout the project site and pipe installation locations and would not take place all at once. Odorous hydrocarbons emissions would dissipate beyond the emissions sources and would only affect receptors in the immediate vicinity of the construction site. Construction-related operations would also be temporary in nature and would cease at the completion of construction. Therefore, construction activities would not result in nuisance odors. Odor impacts associated with construction would be less than significant.

5.4.2 Operation

Unlike typical wastewater treatment facilities, the proposed MFRO facility would not process raw sewage. The MFRO would process Title 22 treated recycled water from the HARRF. This treated water is not a significant source of odors. The proposed standby generator would be an occasional source of diesel fumes. As discussed in subsection 3.3, the closest existing sensitive receptors to the project site are approximately 2,000 feet (0.38 mile) south of the project site. Therefore, long-term operation of the project would not result in other emissions (such as odors) adversely affecting a substantial number of people. The impact would be less than significant.

6.0 GREENHOUSE GAS IMPACT ANALYSIS

This section evaluates potential impacts of the project related to the generation of GHG emissions. Complete modeling results are included as Appendix A of this report.

6.1 GREENHOUSE GAS EMISSIONS

6.1.1 Construction Emissions

Project construction GHG emissions were estimated using CalEEMod model as described in subsection 4.1. Project-specific input was based on general information provided in Section 1.0 and

default model settings to estimate reasonably conservative conditions. Additional details of phasing, selection of construction equipment, and other input parameters, including CalEEMod data, are included in Appendix A.

Emissions of GHGs related to the construction of the project would be temporary. As shown in Table 14, *Construction GHG Emissions*, the total estimated GHG emissions associated with construction of the project would be 881.6 MT CO_2e. To be conservative in accounting for all project sources of GHG emissions, the construction period GHG emissions were amortized (i.e., averaged) over 30 years and added to operational emissions. Averaged over 30 years, the proposed construction activities would contribute approximately 29.4 MT CO_2e emissions per year.

Table 14
CONSTRUCTION GHG EMISSIONS

Year	Emissions (MT CO_2e)
2020	234.2
2021	466.8
2022	180.6
TOTAL[1]	**881.6**
Amortized Construction Emissions[2]	*29.4*

Source: CalEEMod (output data is provided in Appendix A).
[1] Totals may not sum due to rounding.
[2] Construction emissions are amortized over 30 years.
MT = metric ton; CO_2e = carbon dioxide equivalent

6.1.2 Operational Emissions

The project total operation GHG emissions, including the amortized annual construction emissions are shown in Table 15, *Operational GHG Emissions*. The CalEEMod output files are included in Appendix A to this report.

Table 15
OPERATIONAL GHG EMISSIONS

Emission Sources	Emissions (MT CO_2e)
	2021
Area	<0.1
Energy	582.5
Mobile	8.3
Stationary Sources	11.0
Solid Waste	3.0
Water and Wastewater	1.4
Operational Subtotal	**606.2**
Construction (Annualized over 30 years)	*29.4*
TOTAL OPERATIONAL EMISSIONS	**635.6**
Adjusted (2023) Screening Threshold	*2,145.0*
Exceed Threshold?	***No***

Source: CalEEMod (output data is provided in Appendix A)
Note: Totals may not sum due to rounding
MT = metric ton; CO_2e = carbon dioxide equivalent

As shown in Table 15, the project would result in annual GHG emissions of 635.6 MT CO_2e which would not exceed the 2023 adjusted City screening threshold of 2,145 MT CO_2e per year. Therefore, the project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. The impact would be less than significant, no mitigation would be required.

6.2 CONSISTENCY WITH LOCAL PLANS ADOPTED FOR THE PURPOSE OF REDUCING GHG EMISSIONS

There are numerous State plans, policies, and regulations adopted for the purpose of reducing GHG emissions. The principal overall State plan and policy is AB 32 and SB 32, the California Global Warming Solutions Act of 2006. The quantitative goal of AB 32 is to reduce GHG emissions to 1990 levels by 2020. SB 32 would require further reductions of 40 percent below 1990 levels by 2030. Statewide plans and regulations such as GHG emissions standards for vehicles (AB 1493), the LCFS, and regulations requiring an increasing proportion of electricity to be generated from renewable sources are being implemented at the statewide level; as such, compliance at the project level is not addressed. Therefore, the proposed project does not conflict with those plans and regulations.

As previously discussed, the increase in GHG emissions would be less than the City's significance threshold being applied to this analysis. In addition, by providing high-quality recycled water for agricultural uses, the project would reduce the use of potable water or pumped ground water for irrigation, consistent with the City's CAP GHG emissions reduction programs R2-W2, Water Conservation Strategies, and R2-W3, Increased Recycled Water Use (City 2013a). Therefore, the proposed project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. The impact would be less than significant, no mitigation would be required.

7.0 GENERAL CONFORMITY

This section evaluates potential adverse effects of the proposed project as they relate to air pollutant emissions for the purposes of conformity with federal regulations. Project construction and operational emissions were estimated using the CalEEMod model as described in Section 4.0. Table 16, *Annual Construction Emissions,* shows a conservative estimate of project construction emissions for comparison to the *de minimis* conformity thresholds. As shown in Table 16, emissions from construction of the proposed project would not exceed *de minimis* conformity thresholds.

Table 16
ANNUAL CONSTRUCTION EMISSIONS

Year	Pollutant Emissions (tons per year)					
	ROG	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
2020	0.1	1.6	1.1	<0.1	0.1	<0.1
2021	0.3	2.7	2.5	<0.1	0.2	0.1
2022	0.7	0.9	1.0	<0.1	<0.1	<0.1
Maximum Annual Emissions	**0.7**	**2.7**	**2.5**	**<0.1**	**0.2**	**0.1**
De minimis Thresholds	*100*	*100*	*100*	-	-	-
Significant Impact?	***No***	***No***	***No***	***No***	***No***	***No***

Source: CalEEMod (output data is provided in Appendix A)
ROG = reactive organic gas; NO_X = nitrogen oxides; CO = carbon monoxide; SO_X = sulfur oxides;
PM_{10} = particulate matter 10 microns in diameter; $PM_{2.5}$ = particulate matter 2.5 microns in diameter

Estimated project operational emissions are compared to the *de minimis* conformity thresholds in Table 17, *Annual Operational Emissions*. As shown in Table 17, emissions from operation of the proposed project would not exceed *de minimis* conformity thresholds. Therefore, the proposed action would be in conformance with the CAA and no further conformity analysis is required.

Table 17
ANNUAL OPERATIONAL EMISSIONS

Year	Pollutant Emissions (tons per year)					
	ROG	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**

1.3 User Entered Comments & Non-Default Data

ESC-31 Escondido MFRO Daily - San Diego County, Winter

Project Characteristics - This model is for maximum daily emissions.

Land Use - Commercial = office area.
Industrial = remaining MFRO bldg. + outdoor tank area.
Parking Other Asphaslt = Production pipeline; Other Non-Asphalt = bioretention and burried pipes on-site.
Parking Lot = roads, parking, and paved area.

Construction Phase - Phasing adjusted to fit estimated 24 month construction schedule and material export/import requirements.

Off-road Equipment -

Off-road Equipment - Equipment for foundations, MFRO builging, and tank/pump station construction.

Off-road Equipment - Equipment adjusted for demo of a steel storage building and misc. walls and fencing.

Off-road Equipment -

Off-road Equipment - Equipment for pipeline excavation/construction.

Off-road Equipment - Site prep dozer reduced, grader and loader added.

Off-road Equipment - Equipment for street repaving.

Trips and VMT -

Demolition -

Grading - 8,500 CY soil, asphalt, concrete and debris exported during Site Prep/Grading.
7,000 CY soil and asphalt exported and 4,000 CY aggregate imported during pipeline construction.

Vehicle Trips - Maximum daily trips based on 1 full time employee; plus 5 employees for maintenance; plus 1 chemical delivery.

Energy Use - Energy use for MFRO estimated based on defualt 1,911 KWhr/Mgal for wastewater treatmentfaciliies, and default 1,272 KWhr for water delivery.
Aveerage annual production of 1.5 Mgal/day (75% of capacity) assumed.

Water And Wastewater - MFRO treated water use for maintnenance only.

Solid Waste - Minimal solid wate generation for MFRO.

Construction Off-road Equipment Mitigation - Dust mitigation per SDAPCD Rule 55.

Operational Off-Road Equipment - 1,750 KW backup generator, run 16 hrs/year, up 4 hrs/day for maintenance/testing.

Fleet Mix - Fleet mix for employee commute (LDA & LDT), miantenance vehicles (MDV), and chemical deliveries (HHD).

1.3 User Entered Comments & Non-Default Data

EC-31 Escondido MFRO Annual - San Diego County, Annual

Project Characteristics - This model is for annual emissions.

Land Use - Commercial = office area.
Industrial = remaining MFRO bldg. + outdoor tank area.
Parking Other Asphaslt = Production pipeline; Other Non-Asphalt = bioretention and burried pipes on-site.
Parking Lot = roads, parking, and paved area.

Construction Phase - Phasing adjusted to fit estimated 24 month construction schedule and material export/import requirements.

Off-road Equipment -

Off-road Equipment - Equipment for foundations, MFRO builging, and tank/pump station construction.

Off-road Equipment - Equipment adjusted for demo of a steel storage building and misc. walls and fencing.

Off-road Equipment -

Off-road Equipment - Equipment for pipeline excavation/construction.

Off-road Equipment - Site prep dozer reduced, grader and loader added.

Off-road Equipment - Equipment for street repaving.

Trips and VMT -

Demolition -

Grading - 8,500 CY soil, asphalt, concrete and debris exported during Site Prep/Grading.
7,000 CY soil and asphalt exported and 4,000 CY aggregate imported during pipeline construction.

Vehicle Trips - Trips based on 1 full time employee; plus 5 employees for maintenance 36 days per year, plus 9 monthly chemical deliveries.

Energy Use - Energy use for MFRO estimated based on defualt 1,911 KWhr/Mgal for wastewater treatmentfaciliies, and default 1,272 KWhr for water delivery.
Aveerage annual production of 1.5 Mgal/day (75% of capacity) assumed.

Water And Wastewater - MFRO treated water use for maintnenance only.

Solid Waste - Minimal solid wate generation for MFRO.

Construction Off-road Equipment Mitigation - Dust mitigation per SDAPCD Rule 55.

Operational Off-Road Equipment - 1,750 KW backup generator, run 16 hrs/year, up 4 hrs/day for maintenance/testing.

Fleet Mix - Fleet mix for employee commute (LDA & LDT), miantenance vehicles (MDV), and chemical deliveries (HHD).

Ms. Angela Morrow, P.E.
Deputy Director of Utilities/ Construction and Engineering
City of Escondido
Utilities Engineering Office
1521 S. Hale Avenue
Escondido, CA 92029

Subject: **Biological Resources Report for the Escondido Membrane Filtration Reverse Osmosis (MFRO) Facility Project**

Dear Ms. Morrow:

This report documents the results of a biological resources technical study completed by HELIX Environmental Planning, Inc. (HELIX) for the Escondido Membrane Filtration Reverse Osmosis (MFRO) Facility Project (project) located within the City of Escondido, San Diego County, California (Figure 1, *Regional Location*). The City of Escondido Utilities (City) plans to construct a MFRO Facility to provide water for agricultural use. This facility would provide advanced treatment for Title 22 quality reuse water produced at the Hale Avenue Resources Recovery Facility (HARRF).

This report is intended to summarize the existing biological resources within the project site and provide an analysis of the proposed impacts in accordance with the California Environmental Quality Act (CEQA) and applicable federal, state, and local policy. The project is seeking funding from the Drinking Water State Revolving Fund (SRF) for a portion of the construction work. A federal policy conformance and cross-cutter analysis is also included to facilitate SRF review by the State Water Resources Control Board (SWRCB).

PROJECT DESCRIPTION AND LOCATION

The City proposes to construct and operate the MFRO Facility to provide water for agricultural use. The facility would utilize membrane filtration (MF) (i.e., microfiltration or ultrafiltration membranes) and reverse osmosis (RO) technologies sized for a total production capacity of 2.0 million gallons per day (mgd). High quality treated water would be blended with Title 22 recycled water within an on-site blend tank. The water would then be sent through the existing non-potable reuse water/agriculture pipelines and distributed to growers.

The proposed project would consist of a commercial/industrial-like building (MFRO Facility), which would include partitioned areas to house the MFRO equipment, pumps, chemical storage, electrical rooms, control rooms, and a meeting room that includes a restroom, kitchenette, and janitorial closet. The proposed MFRO product water pipeline alignment within West Washington Avenue is approximately one mile long and would connect via a pipeline in Waverly Place to the existing 24-inch recycled water pipeline on the north side of Escondido Creek. The product water pipeline would primarily reside within the City's right of way (ROW) with a short segment encroaching into Caltrans ROW.

Construction of the MFRO facility would displace existing facilities used by the Escondido Public Works and Utilities/Water Departments for vactor truck decanting and material storage. These facilities would be relocated within the site, as shown on Figure 3. The decanting facility would be approximately 4,800 square feet in size, with four dump/wash bays and two concrete pads for dumpsters. The material storage bins are open loading bins which house material used for City Public Works and Utilities Water operations. The size of the relocated concrete pad is approximately 12,250 square feet.

It is anticipated that soil import/export will be limited via a balanced grading plan. A maximum of twenty-four daily truck trips would be a reasonable limitation importing/exporting soil. Soil hauling would occur over approximately one month. Any disposal of the excavated materials would be disposed of at an appropriate permitted disposal site depending on the type of material. On-site soils are anticipated as suitable for fill.

The project site is generally located in the City of Escondido in northcentral San Diego County (Figure 1). It is depicted on the Escondido, California U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle, within an unsectioned portion of the Rincon del Diablo Land Grant (Figure 2, *Project Location [USGS Topography]*). More specifically, the MFRO facility and recycled water, sewer, and brine pipeline connections are located north of the SPRINTER rail line, south of State Route (SR) 78, east of Interstate (I-) 15, and west of N. Spruce Street and the Reidy Creek flood control channel, at 901 West Washington Avenue (Figure 3, *Project Location [Aerial Photograph]*). The MFRO product water pipeline alignment occurs along West Washington Avenue between the MFRO facility and Waverly Place, and along Waverly Place. This pipeline crosses the Reidy Creek flood control channel and terminates at the edge of Escondido Creek. The MFRO facility occurs with an approximately 10.3-acre parcel owned by the City of Escondido (City). The APN number is 232-090-7200.

The site is located outside of the Coastal Zone and outside of Critical Habitat designated by the U.S. Fish and Wildlife Service (USFWS; Figure 4, *USFWS Critical Habitat*). The MFRO facility site plan is provided as Figure 5, *Site Plan*.

METHODS

Literature Review

Prior to conducting the general biological survey, HELIX performed an updated search of the California Natural Diversity Database (CNDDB; California Department of Fish and Wildlife [CDFW] 2019a-b, 2018), U.S. Fish and Wildlife Service (USFWS) Carlsbad Fish and Wildlife Offices Species Status Lists (U.S. Fish and Wildlife Service [USFWS 2019a]), USFWS Critical Habitat Portal (USFWS 2019b), USFWS National Wetlands Inventory (USFWS 2019c), USFWS Information for Planning and Conservation (IPaC), and

SanBIOS, database applications to obtain information regarding sensitive biological resources known to occur within the vicinity of the study area. The IPaC report was re-run in October, following changes to the project area.

General Biological Survey

A general biological survey of the study area, which encompassed the project site and immediate vicinity, was completed by HELIX biologist Karl Osmundson on January 28, 2019. The survey focused on inventorying existing vegetation communities; qualifying habitat suitability and potential for occurrence of sensitive species, including federally-listed species protected under the Endangered Species Act; preliminarily identifying potential wetlands and other potential jurisdictional waters, including waters of the U.S. protected under the Clean Water Act (CWA); and identifying other sensitive biological resources, such as potential nesting habitat for bird species protected under the Migratory Bird Treaty Act (MBTA). The study area was surveyed with the aid of binoculars and observed or detected plant and animal species were recorded in field notes. Animal identifications were made in the field by visual observation or detection of calls, burrows, tracks, scat, and other animal sign. Plant identifications were made in the field. Representative photos were taken and are included as Attachment A.

Preliminary Jurisdictional Delineation

HELIX completed a preliminary jurisdictional delineation concurrent with the general biological survey. The preliminary delineation focused on assessing ordinary high-water mark and other hydrology indicators, riparian and wetland vegetation, surface soils, topography, and other data, but did not include excavation of soil pits and establishment of wetland sampling points, with the intent to establish conservative limits of potential jurisdiction.

Prior to beginning fieldwork, aerial photographs (1"= 100' scale), topographic maps and data (1"= 100' scale), and National Wetlands Inventory maps were reviewed to assist in determining the location of potential jurisdictional areas in the project site. The field delineations were conducted to identify and map potential water and wetland resources that could be subject to U.S. Army Corps of Engineers (USACE) jurisdiction pursuant to Section 404 of the CWA (33 USC 1344), RWQCB jurisdiction pursuant to CWA Section 401 or State Porter-Cologne Water Quality Control Act, and CDFW jurisdiction pursuant to Sections 1600 et seq. of the California Fish and Game Code (CFG Code). Areas generally characterized by depressions, drainage features, and riparian and wetland vegetation were evaluated.

Survey Limitations

The lists of species identified are not necessarily comprehensive accounts of all species that occur on the site, as species that are nocturnal, secretive, or seasonally restricted may not have been observed.

Nomenclature

Nomenclature for this report follows Baldwin et al. (2012) for Latin names of plants, and Holland (1986) and Oberbauer (2008) for vegetation communities. Animal nomenclature follows North American Butterfly Association (2017) for butterflies, Center for North American Herpetology (Taggart 2015) for reptiles and amphibians, American Ornithological Society (2018) for birds, and Bradley et al. (2017) for mammals. Sensitive plant and animal status is from the CDFW's CNDDB (2019a-b, 2018).

ENVIRONMENTAL SETTING

Existing Conditions

Regional Context

The project site is located in the heart of a developed industrial district within the City (Figure 3). The site does not occur in or near lands identified for conservation or preserve configuration in the region. The only biological resources located nearby the site that are of local importance include the Reidy Creek flood control channel and Escondido Creek. Both reaches are concrete lined, but serve as important flood conveyance features for the local area, conveying storm water to natural downstream reaches of Escondido Creek that support regionally-important biological resources.

Disturbance

The project site is currently developed with City field offices, a metal storage building, and an asphalt paved parking lot. The remainder of the site is used by the City Public Works and Utilities Departments for storage and heavy equipment training, except for a location on the west side that is used by EDCO, a waste disposal corporation, for the storage of empty roll-off bins. The entirety of the site is developed and highly disturbed.

Topography and Soils

The project site is flat, with an elevation of approximately 656 feet above mean sea level (AMSL) to 644 AMSL. The MFRO facility, including pipeline connections, are mapped as Visalia sandy loam, 2 to 5 percent slopes (USDA 2017). The Visalia series of soils is characterized by moderately well-drained, very deep sandy loams and are formed from granitic alluvial deposits (Bowman 1973). The pipeline alignment includes Visalia sandy loam, 2 to 5 percent slopes; Placentia sandy loam, 2 to 9 percent slopes, warm MAAT, MLRA 19; and Ramona sandy loam, 2 to 5 percent slopes. The Placentia series is characterized by well-drained, sandy loam, clay and heavy sandy clay loam, and gravelly sandy loam horizons that formed in alluvium from granite and other rocks of similar composition and texture. The Ramona series is characterized by well-drained, very deep sandy loams that have a sandy clay loam subsoil and are formed in granitic alluvium. The surface soils of the project site show sign of significant disturbance and alteration from their native state.

Vegetation Communities/Habitat Types

One land cover or habitat type encompasses the project site: developed land (Figure 6, *Vegetation/Project Impacts*). Developed or urban/developed includes land that has been constructed upon or otherwise physically altered to an extent that native vegetation is no longer supported. Developed land is characterized by permanent or semi-permanent structures, pavement or hardscape, and landscaped areas that often require irrigation. Areas where no natural land is evident due to a large amount of debris or other materials being placed upon it may also be considered developed.

The MFRO facility site includes structures, paved parking areas, graveled roads, compacted bare earth used as roadways and for heavy equipment training, materials storage areas, and stockpiles. Sparse trees occur along the edges of the MFRO facility site, including blue gum (*Eucalyptus globulus*), ribbon

gum (*Eucalyptus viminalis*), queen palm (*Syagrus romanzoffiana*), and acacia (*Acacia* sp.). Additional non-native ornamental landscaping occurs within portions of West Washington Avenue where the proposed pipeline will be installed, and along the proposed pipeline connections. Approximately 13.0 acres of developed land characterized by these elements occur within the project site.

Flora

HELIX identified a total of eight plant species in the project parcel, all of which are non-native species (Attachment B). Additional non-native ornamental landscaping occurs within portions of West Washington Avenue where the proposed pipeline will be installed.

Fauna

A total of four animal species were observed or otherwise detected in the project site during the biological survey, consisting of three birds and one mammal species (Attachment C).

Sensitive Biological Resources

Sensitive Natural Communities

Sensitive natural communities include land that supports unique vegetation communities or the habitats of rare or endangered species or subspecies of animals or plants as defined by Section 15380 of the CEQA Guidelines. Developed land does not meet the definition of sensitive. No sensitive natural communities occur on-site.

Special-Status Plant and Animal Species

Special-Status Plant Species

Special-status plant species are those listed as federally threatened or endangered by the USFWS; State listed as threatened or endangered or considered sensitive by the CDFW; and/or are California Native Plant Society (CNPS) California Rare Plant Rank (CRPR) List 1A, 1B, or 2 species, as recognized in the CNPS Inventory of Rare and Endangered Vascular Plants of California and consistent with the CEQA Guidelines. No Special-status plant species were observed on-site.

Special status plant species evaluated for their potential to occur in the study area are listed in Attachment D. There are no special status plant species with the potential to occur on-site due to lack of suitable habitat and regular disturbance.

Special-Status Animal Species

Special-status animal species are those listed as threatened or endangered, proposed for listing, or candidates for listing by the USFWS and considered sensitive animals by the CDFW. No special-status animal species were observed on the project site during the general biological survey.

Special status animal species evaluated for their potential to occur in the study area are listed in Attachment E. There are no special status animal species with the potential to occur on-site due to lack of suitable habitat and regular disturbance.

Nesting Birds and Raptors

Limited portions of the project site contain marginal nesting habitat (e.g., trees, shrubs, structures) for several common bird species, including raptors, protected under the MBTA and CFG Code.

Jurisdictional Waters and Wetlands

The project site is characterized entirely by uplands that lack potential jurisdictional waters and wetlands.

Wildlife Corridors and Linkages

Wildlife corridors connect isolated habitat and allow movement or dispersal of plant materials and animals. Local wildlife corridors allow access to resources such as food, water, and shelter within the framework of the wildlife's daily routine and life history. For example, animals can use these corridors to travel between their riparian breeding habitats and their upland burrowing habitats. Regional corridors provide these functions over a larger scale and link two or more large habitat areas, allowing the dispersal of organisms and the consequent mixing of genes between populations. A corridor is a specific route that is used for the movement and migration of species; it may be different from a linkage in that it represents a smaller or narrower avenue for movement. A linkage is an area of land that supports or contributes to the long-term movement of animals and genetic exchange by providing live-in habitat that connects to other habitat areas. Many linkages occur as stepping-stone linkages that are made up of a fragmented archipelago arrangement of habitat over a linear distance.

The project site does not by itself serve as or contribute to any known or potential corridors or linkages.

APPLICABLE REGULATIONS

Based on the findings of this report, activities affecting the biological resources determined to exist or have the potential to exist within the project site could be subject to the federal, state, and local regulations discussed below.

Federal

Federal Endangered Species Act

The Federal Endangered Species Act (ESA) (7 United States Code [USC] 136; 16 USC 460 et seq. [1973]) extends legal protection to plants and animals, listed as endangered or threatened by the USFWS and gives authorization to the USFWS to review proposed federal actions to assess potential impacts to species listed as endangered or threatened. The ESA generally prohibits the "taking" of a federally listed species and adverse modification of designated critical habitat.

"Taking" of a threatened or endangered species is deemed to occur when an intentional or negligent act or omission results in any of the following actions: "to harass, harm, pursue, hunt, shoot, kill, trap, capture, or collect, or attempt to engage in any such conduct." Such acts may include significant habitat modification or degradation if it results in death or injury. Likewise, import, export, interstate, and foreign commerce of listed species are all prohibited. Sections 7 and 10 of the ESA permit "incidental

take" of a listed species via a federal or private action, respectively, through formal consultation with the USFWS. In lieu of a separate Section 10a Permit, an applicant may be included in a local Habitat Conservation Plan.

Migratory Bird Treaty Act

All migratory bird species that are native to the United States or its territories are protected under the federal MBTA as amended under the Migratory Bird Treaty Reform Act of 2004 (Federal Record [FR] Doc. 05-5127). The MBTA is generally protective of migratory birds but does not actually stipulate the type of protection required. In common practice, USFWS places restrictions on disturbances allowed near active raptor nests.

Clean Water Act

The USACE regulates impacts to waters of the U.S. under Section 404 of the Clean Water Act (CWA; 33 USC 401 et seq.; 33 USC 1344; USC 1413; and Department of Defense, Department of the Army, Corps of Engineers 33 Code of Federal Regulations [CFR] Part 323). The purpose of the CWA is to restore and maintain the chemical, physical, and biological integrity of all waters of the U.S. A federal CWA Section 404 Permit would be required for a project to place fill in waters of the U.S. Projects impacting waters of the U.S. can be permitted on an individual basis or be covered under one of several approved nationwide permits. Individual permits are assessed individually based on the type of action, amount of fill, etc. Individual permits typically require substantial time (often longer than one year) to review and approve, while nationwide permits are pre-approved if a project meets appropriate conditions. Utility line activities may be authorized under CWA Section 404 Nationwide Permit (NWP) 12, which does not place a limit on impacts to linear feet of waters of the U.S. A CWA Section 401 Water Quality Certification administered by the RWQCB must be issued prior to issuance of a Section 404 Permit.

State

California Environmental Quality Act

Primary environmental legislation in California is found in the CEQA and its implementing guidelines (State CEQA Guidelines), requiring that projects with potential adverse effects or impacts on the environment undergo environmental review. Adverse impacts to the environment are typically mitigated as a result of the environmental review process in accordance with laws and regulations.

Although threatened and endangered species are protected by specific federal and state statutes, CEQA Guidelines Section 15380(d) provides that a species not listed on the federal or state list of protected species may be considered rare or endangered if the species can be shown to meet certain specified criteria. These criteria have been modeled after the definition in ESA and the section of the CFG Code dealing with rare or endangered plants and animals. CEQA Guideline Section 15380(d) allows a public agency to undertake a review to determine whether a significant effect would occur on species that have not yet been listed by either the USFWS or CDFW (i.e., species of concern). Thus, if warranted under special circumstances, CEQA provides an agency with the ability to protect a species from a project's potential impacts until the respective government agencies have an opportunity to designate the species as formally protected.

Pursuant to the requirements of CEQA, an agency reviewing a proposed project within its jurisdiction must determine whether any state-listed endangered or threatened species may be present in the project area and determine whether the proposed project will have a potentially significant impact on such species.

California Fish and Game Code

The CFG Code regulates the taking or possession of birds, mammals, fish, amphibians, and reptiles, as well as natural resources such as lakes and streams. Sections 1600 et seq. of CFG Code includes definitions and provisions for the protection of lake and streambed resources. The CDFW requires notification for any activity that could result in an alteration of lake or streambed resources. Pursuant to CFG Code Section 3503, it is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by the code or any regulation made pursuant thereto. Raptors (birds of prey) and owls and their active nests are protected by CFG Code Section 3503.5, which states that it is unlawful to take, possess, or destroy any birds of prey or to take, possess, or destroy the nest or eggs of any such bird unless authorized by the CDFW. In common practice, CDFW places timing restrictions on the clearing of potential nesting habitat (e.g., vegetation), as well as restrictions on disturbances allowed near active raptor nests.

SIGNIFICANCE OF PROJECT IMPACTS AND PROPOSED MITIGATION

This section provides a project-level biological resources impact analysis for the proposed project in support of environmental review. The issues addressed in this section are derived from Appendix G of the State CEQA Guidelines. Mitigation, monitoring, and reporting requirements to eliminate or reduce project impacts to a less than significant level are also provided in this section.

Issue 1: Special-Status Species

Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS?

Issue 1 Impact Analysis

Less than Significant Impact with Mitigation. Project construction could result in potential significant impacts on nesting birds protected under the federal MBTA and CFG Code; however, the impacts would be reduced to less than significant levels with the implementation of proposed mitigation, as described in further detail below. The project would have no impact on any other special-status plant and animal species due to the lack of suitable habitat on the site and regular disturbance.

Nesting Birds

Trees, shrubs, and other vegetation that provide suitable nesting habitat for common birds, including raptors, protected under the MBTA and CFG Code are present within and in the immediate vicinity of the potential direct disturbance area for the project, including staging areas. Construction of the proposed project could result in the removal or trimming of trees and other vegetation during the general bird nesting season (January 15 through September 15) and, therefore, could result in impacts

to nesting birds in violation of the MBTA and CFG Code. Direct impacts could occur as a result of removal of vegetation supporting an active nest. Indirect effects could occur as a result of construction noise in the immediate vicinity of undeveloped areas supporting an active bird nest, such that the disturbance results in nest abandonment or nest failure. Impacts would be considered significant. Implementation of mitigation measure Bio-1 would reduce potentially significant impacts on nesting birds and raptors to less than significant levels.

Issue 1 Mitigation Measures

Mitigation

Bio-1 **Avoidance of Nesting Birds and Raptors.** To prevent direct impacts to nesting birds, including raptors, protected under the federal MBTA and CFG Code, the City shall enforce the following:

Project activities requiring the removal and/or trimming of vegetation suitable for nesting birds shall occur outside of the general bird breeding season (January 15 to September 15) to the extent feasible. If the activities cannot avoid the general bird breeding season, a qualified biologist shall be retained to conduct a pre-activity nesting bird survey within seven days prior to the activities to confirm the presence or absence of active bird nests. If no active bird nests are found by the qualified biologist, then the activities shall proceed with the reassurance that no violation to the MBTA and CFG Code would occur. If an active bird nest is found by the qualified biologist, then vegetation removal and/or trimming activities at the nest location shall not be allowed to occur until the qualified biologist has determined that the nest is no longer active. Avoidance buffers should start at 300 feet for passerine birds and 500 feet for raptors. However, buffers could be reduced at the discretion of the qualified biologist depending on the bird species and project activities required in the vicinity of the active nest

Issue 2: Sensitive Natural Communities

Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the CDFW or USFWS?

Issue 2 Impact Analysis

No Impact. The project would have no impact on riparian habitat and sensitive natural communities due to the fact that none occur on the project site. Direct impacts are restricted to existing developed land. If not properly contained, construction activities could result in adverse inadvertent and indirect impacts on resources located immediately adjacent to work areas, including the Reidy Creek and Escondido Creek flood control channels. As a standard construction practice and regulatory requirement, the City will implement Best Management Practices (BMPs) from the required Stormwater Pollution Prevention Plan (SWPPP) for the project, which may include:

- Installing and maintaining sediment and erosion control measures;
- Employing appropriate standard spill prevention practices and clean-up materials;

- Maintaining the project area free of trash and debris;
- Maintaining effective control of fugitive dust; and
- Properly storing, handling, and disposing of toxins and pollutants including waste materials.

Thus, with the required implementation of BMPs and the project's SWPPP, there no indirect impacts to off-site sensitive resources would occur.

Issue 2 Mitigation Measures

No mitigation is required.

Issue 3: Wetlands

Would the project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the federal Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption or other means?

Issue 3 Impact Analysis

No Impact. The project would have no impact on federally protected wetlands given that that none occurs on the project site. As described in Issue 2, the City will implement BMPs during construction, which would prevent any impacts to off-site federally protected wetlands (i.e., within the Reidy Creek flood control channel crossed by the MFRO product water pipeline alignment and downstream of the project, and Escondido Creek near the end of the MFRO product water pipeline alignment).

Issue 3 Mitigation Measures

No mitigation is required.

Issue 4: Wildlife Movement and Nursery Sites

Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory corridors, or impede the use of native wildlife nursery sites?

Issue 4 Impact Analysis

Less than Significant Impact. The project site is not expected to function as a wildlife corridor in its current condition, although birds may use trees on-site. The project site is developed, surrounded by fencing, and within a developed industrial district. Impacts to wildlife movement and nursery sites would be less than significant, and no mitigation is required.

Issue 4 Mitigation Measures

No mitigation is required.

Issue 5: Local Policies and Ordinances

Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Issue 5 Impact Analysis

No Impact. The project would not conflict with any local policies or ordinances protecting biological resources. The removal of mature trees would be replaced in conformance with the City's Grading and Landscape Ordinances (Articles 55 and 66). The project would not conflict with any City policies or ordinances, and no impact would occur.

Issue 5 Mitigation Measures

No mitigation is required.

Issue 6: Adopted Conservation Plans

Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan?

Issue 6 Impact Analysis

No Impact. The City is not a participating entity of any adopted habitat conservation plans for the region, such as the North County Multiple Habitat Conservation Program (MHCP) or Multiple Species Conservation Program (MSCP); therefore, the project is not subject to any such plans and would have no conflicts.

Issue 6 Mitigation Measures

No mitigation is required.

FEDERAL CONFORMANCE ANALYSIS FOR BIOLOGICAL RESOURCES ISSUES

ISSUE 1: Federal Endangered Species Act, Section 7

Does the project involve any direct effects from construction activities, or indirect effects such as growth inducement that may affect federally listed threatened or endangered species or their critical habitat that are known, or have a potential, to occur on-site, in the surrounding area, or in the service area?

No adverse effect. The proposed disturbance area does not contain any critical habitat for federally listed species. The project site does not contain and is not adjacent to undeveloped areas characterized by native habitat that could support animal species listed under the federal ESA. The portions of the Reidy Creek and Escondido Creek flood control channels near the project site are concrete lined and lack suitable habitat for listed species. No direct or indirect effects to federally listed animal species are

expected. Further discussion is provided below regarding potential effects of the proposed action on federally listed species.

Federally Listed Plant Species

No adverse effect. No federally listed plant species were found during the project survey, and none have a high potential to occur. The project occurs in developed land currently being used as office space, storage, and training. The project site lacks suitable habitat, soils, and/or hydrology for listed plant species. Therefore, no direct or indirect effects on federally listed plant species are anticipated to occur as a result of proposed project.

The following federally listed endangered (FE) and federally listed threatened (FT) plant species were analyzed for their potential to occur:

- Del Mar manzanita (*Arctostaphylos glandulosa* ssp. *crassifolia*); FE
- Encinitas baccharis (*Baccharis vanessae*); FT
- Nevin's barberry (*Berberis nevinii*); FE
- Orcutt's spineflower (*Chorizanthe orcuttiana*); FE
- San Diego ambrosia (*Ambrosia pumila*); FE
- San Diego button-celery (*Eryngium aristulatum* var. *parishii*); FE
- San Diego thorn-mint (*Acanthomintha ilicifolia*); FT
- spreading navarretia (*Navarretia fossalis*); FT
- thread-leaved brodiaea (*Brodiaea filifolia*); FT
- willowy monardella (*Monardella viminea*); FE

Federally Listed Animal Species

No adverse effect. No federally listed plant species were observed during the project survey, and none have a high potential to occur. The following federally listed endangered (FE) and federally listed threatened (FT) animal species were analyzed for their potential to occur:

- Laguna Mountains skipper (*Pyrgus ruralis lagunae*); FE
- Quino checkerspot butterfly (*Euphydryas editha quino*); FE
- Riverside fairy shrimp (*Streptocephalus woottoni*); FE
- San Diego fairy shrimp (*Branchinecta sandiegonensis*); FE
- California least tern (*Sternula antillarum browni*); FE
- Coastal California gnatcatcher (*Polioptila californica californica*); FT
- Least Bell's vireo (*Vireo bellii pusillus*); FE
- Light-footed Ridgway's rail (*Rallus obsoletus levipe*); FE

- southwestern willow flycatcher (*Empidonax traillii extimus*); FE
- western snowy plover (*Charadrius alexandrinus nivosus*); FT
- Pacific pocket mouse (*Perognathus longimembris pacificus*); FE
- Stephens' kangaroo rat (*Dipodomys stephensi*); FE
- Southern mountain yellow-legged frog (*Rana muscosa*); FE

The project site and surrounding areas lacks suitable habitat for these species. Thus, the project would not directly or indirectly adversely affect federally listed species.

ISSUE 2: Magnuson-Stevens Fishery Conservation and Management Act, Essential Fish Habitat

Does the project involve any direct effects from construction activities, or indirect effects such as growth inducement that may adversely affect essential fish habitat?

No adverse effect. The proposed project would be constructed within developed upland areas that lack marine resources and Essential Fish Habitat regulated under the Magnuson-Stevens Fishery Conservation and Management Act. Therefore, the proposed project would not adversely affect Essential Fish Habitat and would be in conformance with the Magnuson-Stevens Fishery Conservation and Management Act.

ISSUE 3: Coastal Zone Management Act

Is any portion of the project site located within the coastal zone?

No adverse effect. No portion of the project site is located within the coastal zone. Therefore, the proposed project would have no effect on resources protected under the Coastal Zone Management Act.

ISSUE 4: Migratory Bird Treaty Act

Will the project affect protected migratory birds that are known, or have a potential, to occur on-site, in the surrounding area, or in the service area?

No adverse effect. Construction of the project may require the removal or trimming of trees and shrubs within developed areas during the general bird nesting season (January 15 through September 15) and/or raptor nesting season (January 15 through July 31), which could result in potential adverse effects on nesting birds and raptors in violation of the MBTA. Indirect effects could occur as a result of construction noise in the immediate vicinity of undeveloped areas supporting an active bird nest, such that the disturbance results in nest abandonment or nest failure.

With the implementation of mitigation measure Bio-1, the proposed action is not likely to adversely affect nesting birds, and the project would be in conformance with the MBTA.

ISSUE 5: Protection of Wetlands

Does any portion of the project boundaries contain areas that should be evaluated for wetland delineation or require a permit from the USACE?

No adverse effect. No federally-protected wetlands occur within the project site. The Reidy Creek flood control channel occurs east of the MFRO facility and will be crossed by the MFRO product water pipeline alignment. The MFRO product water pipeline alignment connects with an existing recycled water pipeline along Escondido Creek. Potential runoff and increase in pollutants associated with construction activities near to the channel would be controlled and reduced through implementation of BMPs and other protective measures incorporated into the project as mandatory requirements for regulatory compliance and SWPPP implementation. With the incorporation of the protective measures, the project would not result in any adverse effects on federally protected wetlands and would be in conformance with the CWA.

ISSUE 6: Wild and Scenic Rivers Act:

Is any portion of the project located within a wild and scenic river?

No adverse effect. None of the proposed project components are planned on or in the immediate vicinity of areas designated as Wild and Scenic River. Therefore, the proposed project would not adversely affect any areas designated as Wild and Scenic River and would be in conformance with the Wild and Scenic Rivers Act.

CLOSING

We appreciate the opportunity to provide you with this letter report. Please do not hesitate to contact me at (619) 462-1515 or AmyM@helixepi.com, or Biology Group Manager Karl Osmundson at KarlO@helixepi.com if you have any questions or require further assistance.

Sincerely,

Amy Mattson
Biologist

Carnivora	Canidae	*Canis familiaris*	domestic dog

Attachment D
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
ashy spike-moss	*Selaginella cinerascens*	--/-- CNPS 4.1	Rhizomatous fern. Occurs in chaparral and coastal sage scrub. Elevation below 1,804 ft. Above-ground all year.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Banner dudleya	*Dudleya alainae*	--/-- CNPS 3.2	Perennial herb. Occurs on rocky areas in chaparral, lower montane coniferous forest, and Sonoran desert scrub. Elevation 2,428-3,937 ft. Flowering period Apr–Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
beach goldenaster	*Heterotheca sessiliflora* ssp. *sessiliflora*	--/-- CNPS 1B.1	Perennial herb. Occurs in coastal sage scrub and chaparral. Elevation below 197 ft. Flowering period Mar-Dec.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
California's adder's-tongue	*Ophioglossum californicum*	--/-- CNPS 4.2	Rhizomatous fern. Occurs in grassy, open areas where it is generally associated with short grasses and other herbs. Although often found near vernal pools, can also occur in relatively dry, stony areas. Elevation 197-1,476 ft. Above-ground Jan–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
California adolphia	*Adolphia californica*	--/-- CNPS 2B.1	Shrub. Occurs on clay soils in dry canyons and washes in coastal sage scrub and chaparral. Elevation 0-1,312 ft. Flowering period Dec–May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
caraway-leaved woodland gilia	*Saltugilia caruifolia*	--/-- CNPS 4.3	Annual herb. Occurs in rocky soil and openings in chaparral and lower montane coniferous forest. Elevation 460-7,546 ft. Flowering period May-Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
chaparral nolina	*Nolina cismontana*	--/-- CNPS 1B.2	Perennial shrub. Occurs on sandstone or gabbro soils, in chaparral and coastal scrub. Elevation 455–4,185 ft. Flowering period Mar–Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
Cleveland's bush monkeyflower	*Diplacus clevelandii* [*Mimulus clevelandii*]	--/-- CNPS 4.2	Perennial herb. Occurs on gabbroic soils in chaparral, cismontane woodland, and lower montane coniferous forest. Often occurs in disturbed areas, openings, and on rocky soils. Elevation 1,475–6,560 ft. Flowering period Apr–Jul.	**Not Likely to Occur:** Suitable habitat and soils do not occur within the project site.
Coulter's goldfields	*Lasthenia glabrata* ssp. *coulteri*	--/-- CNPS 1B.1	Annual herb. Occurs in coastal salt marshes and swamps, playas, and vernal pools. Elevation 0-4,005 ft. Flowering period Feb–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Coulter's saltbush	*Atriplex coulteri*	--/-- CNPS 1B.2	Perennial herb. Occurs in coastal strand, valley grasslands, and coastal sage scrub. Elevation below 1,640 ft. Flowering period Mar-Oct.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Cuyamaca larkspur	*Delphinium hesperium* ssp. *cuyamacae*	--/Rare CNPS 1B.2	Perennial herb. Occurs in relatively dense montane meadows and lower coniferous forests. Elevation approximately 4,921 ft. Flowering period May - Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
decumbent goldenbush	*Isocoma menziesii* var. *decumbens*	--/-- CNPS 1B.2	Perennial shrub. Occurs in coastal scrub habitats, especially on sandy soils and often in disturbed sites. Elevation 10-1475 ft. Flowering period Apr-Nov.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Del Mar manzanita	*Arctostaphylos glandulosa* ssp. *crassifolia*	FE/-- CNPS 1B.1	Shrub. Occurs in maritime chaparral and closed-cone coniferous forests on sandstone coastal bluffs. Occasionally found inland with denser mixed chaparral vegetation. Elevation 0-328 ft. Flowering period Dec-Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Del Mar sand aster	*Corethrogyne filaginifolia* var. *linifolia*	--/-- CNPS 1B.1	Perennial herb. Occurs on sandy soils in coastal bluff scrub, openings in maritime chaparral, and coastal sage scrub. Elevation below 8,530 ft. Flowering period May-Sept.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
delicate clarkia	*Clarkia delicata*	--/-- CNPS 1B.2	Annual herb. Occurs in shaded areas or the periphery of oak woodlands and cismontane chaparral. Elevation below 328 ft. Flowering period Apr-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
delta woolly-marbles	*Psilocarphus brevissimus* var. *multiflorus*	--/-- CNPS 4.2	Annual herb. Occurs in vernal pools and flats. Elevation 33-1,640 ft. Flowering period May-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Dunn's mariposa lily	*Calochortus dunnii*	--/Rare CNPS 1B.2	Perennial bulbiferous herb. Occurs on dry, stony ridges and fire breaks in chaparral or grassland/chaparral ecotone. Appears to be restricted to gabbroic and metavolcanic soils. Elevation 4,921-5,577 ft. Flowering period Apr-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Encinitas baccharis	*Baccharis vanessae*	FT/SE CNPS 1B.1	Shrub. Mature but relatively low-growing maritime chaparral is primary habitat; also found in southern mixed chaparral and cismontane woodland. Occurs on sandstone soils in steep, open, rocky areas with chaparral associates. Elevation 197–2460 ft. Flowering period Aug–Dec.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Engelmann oak	*Quercus engelmannii*	--/-- CNPS 4.2	Perennial deciduous tree. Occurs in oak woodland, chaparral, riparian woodland, and native grassland. Elevation 160–4,265 ft. Flowering period Mar–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
felt-leaved monardella	*Monardella hypoleuca* ssp. *lanata*	--/-- CNPS 1B.2	Perennial herb. Occurs in chaparral and cismontane woodland. Typically occurs in the understory of mature stands of chamise in xeric situations. Elevation 984-4,921 ft. Flowering period Jun–Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
Fish's milkwort	*Polygala cornuta* var. *fishiae*	--/-- CNPS 4.3	Perennial deciduous shrub. Occurs in chaparral, cismontane woodland, and riparian woodland, particularly in shaded, rocky places in canyons in association with oak woodland or chaparral. Elevation 325–3,280 ft. Flowering period May–Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
golden-rayed pentachaeta	*Pentachaeta aurea* ssp. *aurea*	--/-- CNPS 4.2	Annual herb. Occurs in mesic grasslands, woodlands, conifer forests, and sage scrub. Elevation 260-5,350 ft. Flowering period Mar–July.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
golden violet	*Viola purpurea* ssp. *aurea*	--/-- CNPS 2B.2	Perennial herb. Occurs in pinyon/juniper woodland, sagebrush, and sandy slopes. Elevation 5,120-6,790 ft. Flowering period Apr – Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
graceful tarplant	*Holocarpha virgata* ssp. *elongata*	--/-- CNPS 4.2	Annual herb. Occurs in chaparral, cismontane woodland, coastal scrub, and native grassland. Elevation 195–3,610 ft. Flowering period May–Nov.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Hall's monardella	*Monardella macrantha* ssp. *hallii*	--/-- CNPS 1B.3	Perennial rhizomatous herb. Occurs in broadleaved upland forest, chaparral, lower montane coniferous forest, cismontane woodland, valley and foothill grassland, on dry slopes and ridges in openings. Elevation 2,395–7,200 ft. Flowering period Jun–Oct.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
heart-leaved pitcher sage	*Lepechinia cardiophylla*	--/-- CNPS 1B.2	Perennial shrub. Occurs in closed-cone coniferous forest, chaparral, and cismontane woodland. Elevation 1,540-3,937 ft. Flowering period Apr–Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
intermediate monardella	*Monardella hypoleuca* ssp. *intermedia*	--/-- CNPS 1B.3	Perennial rhizomatous herb. Occurs in chaparral, cismontane woodland, and occasionally lower montane coniferous forest. Usually occurs in understory. Elevation 656-4,101 ft. Flowering period Jun–Sept.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
large-flowered leptosiphon	*Leptosiphon grandiflorus*	--/-- CNPS 4.2	Annual herb. Uses open areas and grassy flats, generally on sandy soil. Occurs in coastal strand, foothill woodland, northern coastal scrub, coastal sage scrub, closed-cone pine forest, valley grassland, and coastal prairie. Elevation below 3,937 ft. Flowering period Apr-Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
lemon lily	*Lilium parryi*	--/-- CNPS 1B.2	Perennial bulbiferous herb. Occurs in moist montane meadows. Elevation 4,265-8,530 ft. Flowering period Jul-Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Lewis' evening primrose	*Camissoniopsis lewisii*	--/-- CNPS 3	Annual herb. Occurs in very sandy substrates near the beach, typically on beach bluffs. Elevation below 984 ft. Flowering period Mar-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
little mousetail	*Myosurus minimus* ssp. *apus*	--/-- CNPS 3.1	Annual herb. Occurs in alkaline vernal pools in native grassland. Elevation 65–2,100 ft. Flowering period Mar–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
mesa horkelia	*Horkelia cuneata* var. *puberula*	--/-- CNPS 1B.1	Perennial herb. Occurs on sandy or gravelly soils in chaparral, cismontane woodland, and coastal scrub. Elevation 225–2,655 ft. Flowering period Mar–May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Munz's sage	*Salvia munzii*	--/-- CNPS 2B.2	Shrub. Occurs in chaparral and Diegan coastal sage scrub. When found is often a dominant plant of the area. Elevation below 2,625 ft. Flowering period Jan-May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
Nevin's barberry	*Berberis nevinii*	FE/SE CNPS 1B.1	Shrub. Occurs in sandy and gravelly places in coastal sage scrub or chaparral, and chaparral with strong desert affinities. Elevation below 2,133 ft. Flowering period Mar-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Nuttall's scrub oak	*Quercus dumosa*	--/-- CNPS 1B.1	Perennial evergreen shrub. Occurs in chaparral and coastal sage scrub in sandy and clay loam habitat. Elevation below 656 ft. Flowering period Feb–Mar.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Orcutt's brodiaea	*Brodiaea orcuttii*	--/-- CNPS 1B.1	Perennial bulbiferous herb. Occurs on mesic or clay soils in vernally moist environments in closed-cone coniferous forest, chaparral, cismontane woodland, meadows and seeps, native grassland, and vernal pools. Elevation 95–5,550 ft. Flowering period May–Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Orcutt's hazardia	*Hazardia orcuttii*	--/ST CNPS 1B.1	Perennial evergreen shrub found in clay soils in maritime chaparral and coastal scrub habitats. Elevation below 656 ft. Flowering period Aug-Oct.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Orcutt's linanthus	*Linanthus orcuttii*	--/-- CNPS 1B.3	Annual herb. Occurs in open, gravelly areas in montane coniferous forest or chaparral. Elevation 3,609-7,054 ft. Flowering period May-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Orcutt's pincushion	*Chaenactis glabriuscula* var. *orcuttiana*	--/-- CNPS 1B.1	Annual herb. Occurs in sandy coastal bluff scrub and coastal dunes. Elevation 197-656 ft. Flowering period Jan-Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Orcutt's spineflower	*Chorizanthe orcuttiana*	FE/SE CNPS 1B.1	Annual herb. Occurs in coastal openings in chaparral, coastal sage scrub, and closed-cone pine forest. Elevation 150-490 ft. Flowering period Mar-May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
Palmer's goldenbush	*Ericameria palmeri* var. *palmeri*	--/-- CNPS 1B.1	Large shrub. Occurs in coastal drainages, mesic chaparral, and occasionally in coastal sage scrub. Elevation 0-1,500 ft. Flowering period Sep–Nov.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Palmer's grapplinghook	*Harpagonella palmeri*	--/-- CNPS 4.2	Annual herb. Occurs on clay soil, in open areas in chaparral, coastal scrub, and native grassland. Elevation 65–3,135 ft. Flowering period Mar–May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Palomar monkeyflower	*Erythranthe diffusa* [*Mimulus diffusus*]	--/-- CNPS 4.3	Annual herb. Occurs in lower montane coniferous forest and chaparral understory. It has been found in xeric openings in the chamise chaparral and beneath conifers near very mesic meadows. Elevation 984-6,890 ft. Flowering period Apr-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
paniculate tarplant	*Deinandra paniculata*	--/-- CNPS 4.2	Annual herb. Occurs on vernally mesic and sometimes sandy soils in coastal scrub, native grassland, and vernal pools. Elevation 80–3,085 ft. Flowering period Mar–Nov.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Parish's brittlescale	*Atriplex parishii*	--/-- CNPS 1B.1	Annual herb. Occurs on highly alkaline silty-clay soils in playas, vernal pools, and chenopod scrub. Elevation 80–6,235 ft. Flowering period Jun–Oct.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Parry's tetracoccus	*Tetracoccus dioicus*	--/-- CNPS 1B.2	Shrub. Occurs on gabbro (e.g. Las Posas) soils in low growing chamise chaparral and sage scrub. Usually, conditions are quite xeric with only limited annual growth. Elevation below 3,281 ft. Flowering period Apr-May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Payson's jewelflower	*Caulanthus simulans*	--/-- CNPS 4.2	Annual herb. Occurs on sandy, granitic soils in chaparral, coastal sage scrub, and pinyon/juniper woodland. Elevation 1,312-7,218 ft. Flowering period (Feb) Mar–May (Jun).	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
peninsular spineflower	*Chorizanthe leptotheca*	--/-- CNPS 4.2	Annual herb. Occurs in chaparral, coastal scrub, and lower montane coniferous forest. Elevation 300–980 ft. Flowering period May–Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
purple stemodia	*Stemodia durantifolia*	--/-- CNPS 2B.1	Perennial herb. Occurs in wet sand or rocks along small creeks and seasonal streams. Elevation below 1,312 ft. Flowering period Jan–Dec.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
rainbow manzanita	*Arctostaphylos rainbowensis*	--/-- CNPS 1B.1	Shrub. Preferred habitat in southern mixed chaparral with a relatively dense canopy from 6 to 8 feet. Elevation 492 - 2,625 ft. Flowering period Dec–Mar.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Ramona horkelia	*Horkelia truncata*	--/-- CNPS 1B.3	Perennial herb. Occurs in chaparral, coastal sage scrub, and cismontane woodland habitats. Supported by clay and gabbroic soils. Elevation 1,312-4,265 ft. Flowering period May–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Robinson's pepper-grass	*Lepidium virginicum* var. *robinsonii*	--/-- CNPS 4.3	Annual herb. Occurs in dry, disturbed areas, bottomland, riverbanks, meadows, fields, pastures, cliffs, chaparral and coastal sage scrub. Elevation below 9,186 ft. Flowering period Jan-Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site, and site is subject to regular use.
round-leaved filaree	*California macrophylla*	--/--	Annual herb. Occurs on clay soils in cismontane woodland and native grassland. Elevation 45–3,935 ft. Flowering period Mar–May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
rush-like bristleweed	*Xanthisma junceum*	--/-- CNPS 4.3	Perennial herb. Occurs in xeric chaparral and coastal sage scrub, on exposed, rocky substrates. Elevation 500-4,000 ft. Flowering period Jun – Jan.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
San Bernardino aster	*Symphyotrichum defoliatum*	--/-- CNPS 1B.2	Perennial rhizomatous herb. Occurs in cismontane woodland, coastal scrub, lower montane coniferous forest, meadows and seeps, marshes and swamps, valley and foothill grassland (vernally mesic), and near ditches, streams, and springs. Elevation below 6,726 ft. Flowering period Jul-Nov.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
San Diego ambrosia	*Ambrosia pumila*	FE/-- CNPS 1B.1	Perennial rhizomatous herb. Generally found along creeks or seasonal drainages along the upper terraces of rivers or periphery of willow riparian areas, primarily on sandy loam or clay soils. Also found in native grassland, valley bottoms, dry drainages, and vernal pool margins. Occurs on loam or clay soils. Often on disturbed sites. Elevation 65–2,000 ft. Flowering period Apr – Oct.	**Not Likely to Occur:** Suitable habitat does not occur within the project site, and site is subject to regular use.
San Diego barrel cactus	*Ferocactus viridescens*	--/-- CNPS 2B.1	Shrub (stem succulent). Occurs in chaparral, coastal sage scrub, valley and foothill grassland, and vernal pools. Optimal habitat for this cactus appears to be Diegan coastal sage scrub hillsides, often at the crest of slopes and growing among cobbles. Elevation 33-492 ft. Flowering period May–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
San Diego button-celery	*Eryngium aristulatum* var. *parishii*	FE/SE CNPS 1B.1	Annual or perennial herb. Occurs in vernal pools or mima mound areas with vernally moist conditions and freshwater marshes. Elevation 115-2,495 ft. Flowering period Apr–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
San Diego County viguiera	*Bahiopsis* [*Viguiera*] *laciniata*	--/-- CNPS 4.3	Perennial shrub. Occurs in coastal sage scrub, often at high density. Elevation 295-2,460 ft. Flowering period Feb–Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
San Diego goldenstar	*Bloomeria clevelandii*	--/-- CNPS 1B.1	Perennial bulbiferous herb. Occurs in valley grasslands, particularly near mima mound topography or in the vicinity of vernal pools, on clay soils. Elevation below 328 ft. Flowering period Apr–May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
San Diego marsh-elder	*Iva hayesiana*	--/-- CNPS 2B.2	Perennial herb. Occurs preferentially in creeks of intermittent streambeds. Typically, the riparian canopy is open, allowing substantial sunlight to reach this marsh-elder. Sandy alluvial embankments with cobbles are frequently utilized. May occur in a variety of wetland/riparian areas. Elevation below 2,953 ft. Flowering period Apr-Oct.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
San Diego milk-vetch	*Astragalus oocarpus*	--/-- CNPS 1B.2	Perennial herb. Typically occurs in cismontane chaparral edges at the periphery of meadows. Associated with open areas and mild soil disturbances in chaparral or open southern oak woodland on dry, brushy slopes. Elevation 1,312-5,840 ft. Flowering period May-Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
San Diego sand aster	*Corethrogyne filaginifolia* var. *incana*	--/-- CNPS 1B.1	Perennial herb. Occurs in coastal sage scrub and chaparral. Elevation 16-2,362 ft. Flowering period Jun-Sept.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
San Diego sagewort	*Artemisia palmeri*	--/-- CNPS 4.2	Shrub. Occurs along streams in coastal sage scrub and chaparral. Identifiable from leaves year round. Elevation 0-3,000 ft. Flowering period May - Sep.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
San Diego sunflower	*Hulsea californica*	--/-- CNPS 1B.3	Perennial herb. Occurs in montane coniferous forest and lightly disturbed chaparral. Occurs in large numbers following fires and is otherwise found in small colonies or singly in mildly disturbed locales. Elevation 3,280-6,562 ft. Flowering period Apr-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
San Diego thorn-mint	*Acanthomintha ilicifolia*	FT/SE CNPS 1B.1	Annual herb. Occurs in vernal pools, clay depressions on mesas, chaparral slopes, and coastal sage scrub. Elevation 150-3,280 ft. Flowering period Apr–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
San Felipe monardella	*Monardella nana* ssp. *leptosiphon*	--/-- CNPS 1B.2	Perennial rhizomatous herb. Occurs in lower montane coniferous forest. Elevation 3,970-5,906 ft. Flowering period Jun-Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
sea dahlia	*Leptosyne maritima*	--/-- CNPS 2B.2	Perennial herb. Occurs on sandstone cliffs and coastal bluffs. Elevation below 66 ft. Flowering period Mar-May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
small-flowered microseris	*Microseris douglasii* ssp. *platycarpha*	--/-- CNPS 4.2	Annual herb. Occurs on clay soils in cismontane woodland, coastal scrub, native grassland, and vernal pools. Elevation 45–3,510 ft. Flowering period Mar–May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
small-flowered morning glory	*Convolvulus simulans*	--/-- CNPS 4.2	Annual herb. Occurs on clay and serpentinite seeps in openings within chaparral, coastal scrub, and native grassland. Elevation 95–2,430 ft. Flowering period Mar–Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
smooth tarplant	*Centromadia pungens* ssp. *laevis*	--/-- CNPS 1B.1	Annual herb. Occurs on alkaline soils in chenopod scrub, meadows and seeps, playas, riparian woodland, and native grassland. Elevation 0–2,100 ft. Flowering period Apr–Sept.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
south coast branching phacelia	*Phacelia ramosissima* var. *austrolitoralis*	--/-- CNPS 3.2	Perennial herb. Usually occurs in non-wetlands. Elevation 15-720 ft. Flowering period Mar-Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
south coast saltscale	*Atriplex pacifica*	--/-- CNPS 1B.2	Annual herb. Occurs on xeric coastal bluff scrub in open areas and alkaline flats. Elevation below 984 ft. Flowering period Mar - Oct.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
southern mountain misery	*Chamaebatia australis*	--/-- CNPS 4.2	Shrub. Occurs on dry slopes in chaparral with gabbro and metavolcanic soils. Elevation 984-4,035 ft. Flowering period Nov-May.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
southern mountains skullcap	*Scutellaria bolanderi* ssp. *austromontana*	--/-- CNPS 1B.2	Perennial herb. Occurs in mesic areas and streambanks in chaparral, cismontane woodland, and lower montane coniferous forest. Elevation 1,390–6,560 ft. Flowering period Jun–Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
southern tarplant	*Centromadia parryi* ssp. *australis*	--/-- CNPS 1B.1	Annual herb. Occurs in seasonally moist (saline) grasslands. Mesic areas in valley and foothill grasslands, coastal scrub, alkaline locales, vernal pools, and peripheral salt marsh are utilized. Elevation below 1,410 ft. Flowering period May–Nov.	**Low Potential to Occur:** Suitable habitat does not occur within the project site.
southwestern spiny rush	*Juncus acutus* ssp. *leopoldii*	--/-- CNPS 4.2	Perennial herb. Occurs in alkaline meadows and seeps, coastal salt marshes, and coastal dunes. Elevation 5–2,955 ft. Flowering period Mar–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
spreading navarretia	*Navarretia fossalis*	FT/-- CNPS 1B.1	Annual herb. Occurs in vernal pools in chenopod scrub, marshes and swamps, and playas. Elevation 95–2,150 ft. Flowering period Apr–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
sticky dudleya	*Dudleya viscida*	--/-- CNPS 1B.2	Perennial herb. Occurs on rocky areas in coastal bluff scrub, chaparral, cismontane woodland, and coastal scrub. Grows predominantly on very steep north-facing slopes in shady, mesic conditions. Elevation 30–1,805 ft. Flowering period Apr–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
summer holly	*Comarostaphylis diversifolia* ssp. *diversifolia*	--/-- CNPS 1B.2	Perennial shrub. Occurs in chaparral and cismontane woodland. Mesic north-facing slopes in southern mixed chaparral are the preferred habitat. Elevation 95–2,590 ft. Flowering period Apr–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
thread-leaved brodiaea	*Brodiaea filifolia*	FT/SE CNPS 1B.1	Perennial herb (bulb). Occurs in coastal sage scrub, cismontane woodlands, vernally moist grassland, and around vernal pools with clay soils. Elevation 82-3,640 ft. Flowering period Mar-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
Torrey pine	*Pinus torreyana* ssp. *torreyana*	--/-- CNPS 1B.2	Tree. Occurs on ocean bluffs in chaparral, coastal scrub, and closed-cone pine forest. Most occur within Torrey Pines State Reserve. Found outside its current range in landscaping. Elevation below 656 ft.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
variegated dudleya	*Dudleya variegata*	--/-- CNPS 1B.2	Perennial herb. Occurs in chaparral, cismontane woodland, coastal sage scrub, valley and foothill grassland, and vernal pools. Elevation below 984 ft. Flowering period Apr-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
vernal barley	*Hordeum intercedens*	--/-- CNPS 3.2	Annual herb. Occurs in coastal dunes, coastal scrub, native grassland (saline flats and depressions), and vernal pools. Elevation 15–3,280 ft. Flowering period Mar–Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
wart-stemmed ceanothus	*Ceanothus verrucosus*	--/-- CNPS 2B.2	Perennial evergreen shrub. Occurs in coastal chaparral intermixed with chamise. Soils consist of Exchequer rocky silt loams and San Miguel-Exchequer rocky silt loams. Elevation below 1,148 ft. Flowering period Jan-Apr.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

Attachment D (cont.)
Special Status Plant Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
western dichondra	*Dichondra occidentalis*	--/-- CNPS 4.2	Perennial rhizomatous herb. Occurs on dry, sandy banks in coastal sage scrub, chaparral, or southern oak woodland. Often proliferates on recently burned slopes. Elevation below 1,706 ft. Flowering period Mar-Jul.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
western spleenwort	*Asplenium vespertinum*	--/-- CNPS 4.2	Perennial herb. Occurs in chaparral, cismontane woodland, and coastal scrub. Elevation 590-3,280 ft. Flowering period Feb-Jun.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.
willowy monardella	*Monardella viminea*	FE/SE CNPS 1B.1	Perennial herb. Occurs in riparian scrub, usually at sandy locales in seasonally dry washes. Generally, there is no canopy cover, and river cobbles may lie in close proximity. Elevation below 1,312 ft. Flowering period Jun–Aug.	**Not Likely to Occur:** Suitable habitat does not occur within the project site.

California Native Plant Society's California Rare Plant Rank:
1A Plants presumed extinct in California.
1B Plants rare, threatened, or endangered in California and elsewhere.
2 Plants rare, threatened, or endangered in California, but more common elsewhere.
3 Plants in need of more information.
4 Plants of limited distribution.

Potential to Occur:
Not Likely to Occur – There are no present or historical records of the species occurring on or in the immediate vicinity, (within 1 mile) of the survey area and the diagnostic habitats strongly associated with the species do not occur on or in the immediate vicinity of the survey area.
Low Potential to Occur – There is a historical record of the species in the vicinity of the survey area and potentially suitable habitat on the survey area, but existing conditions, such as density of cover, prevalence of non-native species, evidence of disturbance, limited habitat area, isolation, substantially reduce the possibility that the species may occur. The survey area is above or below the recognized elevation limits for this species.
Moderate Potential to Occur – The diagnostic habitats associated with the species occur on or in the immediate vicinity of the survey area, but there is not a recorded occurrence of the species within the immediate vicinity (within 1 mile). Some species that contain extremely limited distributions may be considered moderate, even if there is a recorded occurrence in the immediate vicinity.
High Potential to Occur – There is both suitable habitat associated with the species and a historical record of the species on or in the immediate vicinity of the survey area (within 1 mile).
Species Present – The species was observed on the survey area at the time of the survey or during a previous biological survey.

Attachment E
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
INVERTEBRATES				
Crotch bumble bee	*Bombus crotchii*	--/--	Occurs in open grassland and scrub habitat.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
Laguna Mountains skipper	*Pyrgus ruralis lagunae*	FE/--	Occurs in mountain meadow areas in pine forests where the larval foodplant, Cleveland's horkelia (*Horkelia clevelandii*), occurs.	**Not Likely to Occur:** Suitable habitat is not present in the project site, and the associated plant species was not observed.
monarch butterfly	*Danaus plexippus*	--/--	Roosts located in wind-protected tree groves (eucalyptus [*Eucalyptus* sp.], Monterey pine [*Pinus radiata*], cypress [*Cupressus* sp.]), with nectar and water sources nearby. Larval host plants consist of milkweeds (*Asclepias* sp.).	**Not Likely to Occur:** Suitable habitat is not present in the project site, and the associated plant species were not observed.
Quino checkerspot butterfly	*Euphydryas editha quino*	FE/--	Occurs in sunny openings within chaparral and coastal sage shrublands. Host plants include *Plantago erecta, Cordylanthus rigidus*, *Collinsia* spp., *Plantago patagonica*, *Antirrhinum coulterianum*, and *Castilleja exserta.*	**Not Likely to Occur:** Suitable habitat is not present in the project site, and the associated plant species were not observed.
Riverside fairy shrimp	*Streptocephalus woottoni*	FE/--	Typically occurs in deep vernal pools and seasonal wetlands at least 30 centimeters deep (Simovich 1990).	**Not Likely to Occur:** Suitable habitat is not present in the project site.

Attachment E (cont.)
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
San Diego fairy shrimp	*Branchinecta sandiegonensis*	FE/--	Occurs in seasonally astatic pools, which occur in tectonic swales or earth slump basins and other areas of shallow, standing water often in patches of grassland and agriculture interspersed in coastal sage scrub and chaparral.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
VERTEBRATES				
Fish				
Arroyo chub	*Gila orcuttii*	--/SSC	Occurs in freshwater, in sandy and muddy bottoms of flowing pools and runs of headwaters creeks and small to medium rivers. Often found in intermittent streams.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
Reptiles and Amphibians				
arroyo toad	*Anaxyrus californicus*	FE/SSC	Found on banks with open-canopy riparian forest characterized by willows, cottonwoods, or sycamores; breeds in areas with shallow, slowly moving streams, but burrows in adjacent uplands during dry months.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
coast horned lizard	*Phrynosoma blainvillii*	--/SSC	Occurs in coastal sage scrub, chaparral, open oak woodlands, and open coniferous forests. Important habitat components include basking sites, adequate scrub cover, areas of loose soil, and an abundance of harvester ants (*Pogonomyrmex* sp.), a primary prey item.	**Low Potential to Occur:** Suitable habitat is not present in the project site, and associated species not observed.

Attachment E (cont.)
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
coast patch-nosed snake	*Salvadora hexalepis virgultea*	--/SSC	Inhabits semi-arid brushy areas and chaparral in canyons, rocky hillsides, and plains.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
coastal whiptail	*Aspidoscelis tigris stejnegeri*	--/SSC	Occurs in open coastal sage scrub, chaparral, and woodlands. Frequently found along the edges of dirt roads traversing its habitats. Important habitat components include open, sunny areas, shrub cover with accumulated leaf litter, and an abundance of insects, spiders, or scorpions.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
Coronado skink	*Plestiodon skiltonianus interparietalis*	--/WL	Occurs in grasslands, coastal sage scrub, and open chaparral where there is abundant leaf litter or low herbaceous growth.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
large-blotched salamander	*Ensatina eschscholtzii klauberi*	--/WL	Occurs in evergreen and deciduous forests and oak woodlands. Requires rocks, logs, and debris, under which they may remain moist.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
orange-throated whiptail	*Aspidoscelis hyperythra*	--/WL	Occurs in coastal sage scrub, chaparral, edges of riparian woodlands, and washes. Also found in weedy, disturbed areas adjacent to these habitats. Important habitat requirements include open, sunny areas, shaded areas, and abundant insect prey base, particularly termites (*Reticulitermes* sp.).	**Low Potential to Occur:** Suitable habitat is not present in the project site.
red-diamond rattlesnake	*Crotalus ruber*	--/SSC	Found in chaparral, coastal sage scrub, along creek banks, particularly among rock outcrops or piles of debris with a supply of burrowing rodents for prey.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
rosy boa	*Charina trivirgata*	--/--	Occurs among rocky outcrops in coastal sage scrub, chaparral, and desert scrub.	**Low Potential to Occur:** Suitable habitat is not present in the project site.

Attachment E (cont.)
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
Southern mountain yellow-legged frog	*Rana muscosa*	FE/SE & WL	Occurs in mid- to upper-elevation permanent waterways, often with open riparian vegetation (Mark Jennings pers. comm. 2003).	**Not Likely to Occur:** Suitable habitat is not present in the project site.
Southwestern [Southern Western] pond turtle	*Actinemys pallida* [*Emys marmorata pallida*]	--/SSC	Almost entirely aquatic. Occurs in freshwater marshes, creeks, ponds, rivers and streams, particularly where basking sites, deep water retreats, and egg laying areas are readily available.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
two-striped gartersnake	*Thamnophis hammondii*	--/SSC	Typical habitat is along permanent and intermittent streams bounded by dense riparian vegetation; also found associated with vernal pools and stock ponds.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
western spadefoot	*Spea hammondii*	--/SSC	Occurs in open coastal sage scrub, chaparral, and grassland, along sandy or gravelly washes, floodplains, alluvial fans, or playas; requires temporary pools for breeding and friable soils for burrowing; generally excluded from areas with bullfrogs (*Rana catesbiana*) or crayfish (*Procambarus* sp.).	**Not Likely to Occur:** Suitable habitat is not present in the project site.
Birds				
Belding's savannah sparrow	*Passerculus sandwichensis beldingi*	--/SE	Occurs in coastal marshes dominated by pickleweed (*Salicornia* spp.)	**Not Likely to Occur:** Suitable habitat is not present in the project site, and the associated plant species was not observed.
Bell's sage sparrow	*Artemisiospiza belli belli*	BCC/WL	Occurs in sunny, dry stands of coastal sage scrub or chaparral.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
burrowing owl	*Athene cunicularia*	BCC/SSC	Occurs in grassland or open scrub habitats.	**Low Potential to Occur:** Suitable habitat is not present in the project site.

Attachment E (cont.)
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
California black rail	*Laterallus jamaicensis*	BCC/ST & FP	Occurs in wetland habitats.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
California least tern	*Sternula antillarum browni*	FE/SE & FP	Occurs in coastal areas adjacent to the ocean.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
coastal cactus wren	*Campylorhynchus brunneicapillus sandiegensis*	BCC/SSC	Occurs in coastal sage scrub with large cacti for nesting.	**Not Likely to Occur:** Suitable habitat is not present in the project site, and the associated plant species were not observed.
coastal California gnatcatcher	*Polioptila californica californica*	FT/SSC	Obligate resident of arid coastal scrub below about 1,500 ft. Usually found within dense coastal scrub habitat in arid washes, on mesas, and on slopes of coastal hills. California buckwheat (*Eriogonum fasciculatum*), coastal sage (*Artemisia californica*), and patches of pricklypear (*Opuntia* sp.) are particularly favored.	**Low Potential to Occur:** Suitable habitat is not present in the project site, and the associated plant species were not observed.
Cooper's hawk	*Accipiter cooperii*	--/WL	Tends to inhabit lowland riparian areas and oak woodlands in proximity to suitable foraging areas such as scrublands or fields.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
golden eagle	*Aquila chrysaetos*	BCC/WL & FP	Typical foraging habitat includes grassy and open, shrubby habitats. Generally nests on remote cliffs; requires areas of solitude at a distance from human habitation.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
least Bell's vireo	*Vireo bellii pusillus*	FE, SE	Summer resident of Southern California. Inhabits riparian woodland and is most frequent in areas that combine an understory of dense, young willows or mule fat with a canopy of tall willows.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
least bittern	*Ixobrychus exilis*	BCC/SSC	This species inhabits areas that contain freshwater or brackish marshes with tall emergent vegetation.	**Not Likely to Occur:** Suitable habitat is not present in the project site.

Attachment E (cont.)
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
Light-footed Ridgway's (clapper) rail	*Rallus obsoletus levipes* [*Rallus longirostris levipes*]	FE/SE & FP	Occurs in coastal salt marshes, especially those dominated by cordgrass (*Spartina* sp.), but has been known to use brackish and freshwater sites.	**Not Likely to Occur:** Suitable habitat is not present in the project site, and the associated plant species was not observed.
southern California rufous-crowned sparrow	*Aimophila ruficeps canescens*	--/WL	Occurs in coastal sage scrub and sparse mixed chaparral on rocky hillsides and in canyons; also found in open sage scrub/grassy areas of successional growth.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
southwestern willow flycatcher	*Empidonax traillii extimus*	FE/SE	Breeds within thickets of willows or other riparian understory usually along streams, ponds, lakes, or canyons. Migrants may be found among other shrubs in wetter areas.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
Swainson's hawk	*Buteo swainsoni*	BCC/ST	This species typically inhabits North America in the spring and summer and winters in South America. They typically prefer open and semi-open country in deserts, grasslands, and prairies. Also likes hayfields and pastures.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
tricolored blackbird	*Agelaius tricolor*	BCC/CE & SSC	Occurs in marsh habitat near grasslands, pastures, and agricultural fields.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
western snowy plover	*Charadrius alexandrinus nivosus*	FT & BCC/SSC	Occurs in beaches, dunes, and salt flats.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
White-faced ibis	*Plegadis chihi*	--/WL	Nests in freshwater marshes and forages in shallow waters and wet, grassy habitats.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
yellow warbler	*Setophaga petechia*	BCC/SSC	Found along riparian woodlands.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
yellow-breasted chat	*Icteria virens*	--/SSC	Prefers mature riparian woodlands.	**Not Likely to Occur:** Suitable habitat is not present in the project site.

Attachment E (cont.)
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
Mammals				
American badger	*Taxidea taxus*	--/SSC	Occurs in open plains and prairies, farmland, and sometimes edges of woods.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
big free-tailed bat	*Nyctinomops macrotis*	--/SSC	Occurs in rocky areas. Roosts in crevices in high cliffs or rock outcrops. Often forages over water. Rare visitor to San Diego county (San Diego Natural History Museum [SDNHM] 2019)	**Low Potential to Occur:** Suitable habitat is not present in the project site.
Dulzura pocket mouse	*Chaetodipus californicus femoralis*	--/SSC	Occurs in a variety of habitats including coastal scrub, chaparral, and grasslands in San Diego County. Associated with grass-chaparral edges	**Low Potential to Occur:** Suitable habitat is not present in the project site. .
hoary bat	*Lasiurus cinereus*	--/--	Occurs in woodland and coniferous forests and forages over open areas or lakes.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
long-eared myotis	*Myotis evotis*	--/--	Occurs in sage to coniferous forests on high mountains, sometimes in buildings.	**Low Potential to Occur:** Potentially suitable habitat is present in the project site, but structures in the project area not likely to be used given the high level of disturbance.
northwestern San Diego pocket mouse	*Chaetodipus fallax fallax*	--/SSC	Occurs in open areas of coastal sage scrub and weedy growth, often on sandy substrates.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
Pacific pocket mouse	*Perognathus longimembris pacificus*	FE/SSC	Occurs on fine-grained, sandy or gravelly substrates in coastal strand, coastal dunes, river alluvium, and coastal sage scrub growing on marine terraces.	**Not Likely to Occur:** Suitable habitat is not present in the project site.

Attachment E (cont.)
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
pallid bat	*Antrozous pallidus*	--/SSC	Locally common species of low elevations in California. Rocky, mountainous areas and near water; also found over more open, sparsely vegetated grasslands, and prefers foraging in the open. Uses three different roosts: 1) the day roost is in a warm, horizontal opening such as rock cracks; 2) the night roost is in the open, near foliage; and 3) the hibernation roost, which is in caves or cracks in rocks.	**Low Potential to Occur:** Potentially suitable habitat is present in the project site, but structures in the project area not likely to be used given the high level of disturbance.
pocketed free-tailed bat	*Nyctinomops femorosaccus*	--/SSC	Semiarid desert lands. Day-roosts in caves, crevices in cliffs, and under the roof tiles of buildings. Uses a variety of arid habitats in southern California: pine-juniper woodlands, desert scrub, palm oases, desert wash, desert riparian, etc. Prefers rocky areas with high cliffs.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
San Diego black-tailed jackrabbit	*Lepus californicus bennettii*	--/SSC	Found primarily in open habitats including coastal sage scrub, chaparral, grasslands, croplands, and open, disturbed areas if there is at least some shrub cover present.	**Low Potential to Occur:** Suitable habitat is not present in the project site.
San Diego desert woodrat	*Neotoma lepida intermedia*	--/SSC	Open chaparral and coastal sage scrub, often building large, stick nests in rock outcrops or around clumps of cactus or yucca.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
silver-haired bat	*Lasionycteris noctivagans*	--/--	Occurs in forests near water. Summer roosts in dead trees; willow (Salix spp.), maple (Acer sp.), and ash (Fraxinus sp.) trees; and uncommonly in structures. Winter roosts are unknown. Rare visitor to San Diego county (SDNHM 2019)	**Low Potential to Occur:** Potentially suitable habitat is present in the project site, but structures in the project area not likely to be used given the high level of disturbance.

Attachment E (cont.)
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur
Stephens' kangaroo rat	*Dipodomys stephensi*	FE/ST	Occurs in Sparsely vegetated habitats of sagebrush or annual grasses.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
Townsend's big-eared bat	*Corynorhinus townsendii*	--/SSC	Occurs in desert scrubs as well as pine and piñon-juniper forests. Requires a water source and caves, mines, tunnels, buildings, or other man-made structures for roosting.	**Low Potential to Occur:** Potentially suitable habitat is present in the project site, but structures in the project area not likely to be used given the high level of disturbance.
western mastiff bat	*Eumops perotis californicus*	--/SSC	Suitable habitat consists of extensive open areas with abundant roost locations (crevices in cliff faces, high buildings, trees, and tunnels).	**Low Potential to Occur:** Potentially suitable habitat is present in the project site, but structures in the project area not likely to be used given the high level of disturbance.
western red bat	*Lasiurus blossevillii*	--/SSC	Occurs in riparian areas dominated by cottonwoods, oaks, sycamores, and walnuts.	**Not Likely to Occur:** Suitable habitat is not present in the project site.
western small-footed myotis	*Myotis ciliolabrum*	--/--	Occurs in rid and shortgrass prairie regions, cliffs, talus, or clay buttes or riverbeds in prairie areas.	**Low potential to Occur:** Suitable habitat is not present in the project site.
western yellow bat	*Lasiurus xanthinus*	--/SSC	Found in wooded areas and desert scrub, particularly in palm trees. Rare visitor to San Diego County (SDNHM 2019).	**Low Potential to Occur:** Suitable habitat is not present in the project site.
Yuma myotis	*Myotis yumanensis*	--/--	Preferred habitat is open forests and woodland. Closely tied to bodies of water for foraging and drinking. Roosts in buildings, mines, crevices, caves, and under bridges.	**Low Potential to Occur:** Suitable habitat is not present in the project site.

Attachment E (cont.)
Special Status Animal Species with Potential to Occur

Common Name	Species Name	Status [1]	Habitat Associations	Potential to Occur

[1]Listing codes are as follows:

Federal:

FE Federal Endangered
CE Candidate Endangered
FT Federal Threatened
FSC Federal Species of Concern
BCC Bird of Conservation Concern

State:

SSC California Species of Concern
WL Watch List

Potential to Occur:

Not Likely to Occur - There are no present or historical records of the species occurring on or in the immediate vicinity, (within 1 mile) of the survey area and the diagnostic habitats strongly associated with the species do not occur on or in the immediate vicinity of the survey area.

Low Potential to Occur - There is a historical record of the species in the vicinity of the survey area and potentially suitable habitat on the survey area, but existing conditions, such as density of cover, prevalence of non-native species, evidence of disturbance, limited habitat area, isolation, substantially reduce the possibility that the species may occur. The survey area is above or below the recognized elevation limits for this species.

Moderate Potential to Occur - The diagnostic habitats associated with the species occur on or in the immediate vicinity of the survey area, but there is not a recorded occurrence of the species within the immediate vicinity (within 1 mile). Some species that contain extremely limited distributions may be considered moderate, even if there is a recorded occurrence in the immediate vicinity.

High Potential to Occur - There is both suitable habitat associated with the species and a historical record of the species on or in the immediate vicinity of the survey area (within 1 mile).

Species Present - The species was observed on the survey area at the time of the survey or during a previous biological survey.

Project Name: Membrane Filtration Reverse Osmosis (MFRO) Facility Project (Project)

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, and proposed species, designated critical habitat, and candidate species that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Project Type: WATER QUALITY MODIFICATION

Project Description: Membrane Filtration Reverse Osmosis Facility Project in the City of Escondido. The project is being proposed.

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/place/33.123629447329165N117.09474079057159W

Counties: San Diego, CA

Endangered Species Act Species

There is a total of 11 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

EXECUTIVE SUMMARY

HELIX Environmental Planning, Inc. (HELIX) conducted a cultural resources study of the City of Escondido's (City) Membrane Filtration Reverse Osmosis (MFRO) Facility Project (project) in the City of Escondido, San Diego County. The MFRO Facility would provide advanced treatment for Title 22 quality reuse water produced at the Hale Avenue Resources Recovery Facility (HARRF). The project is seeking funding from the Drinking Water State Revolving Fund for a portion of the construction work. As such, the project is subject to review by the State Water Resources Control Board (SWRCB).

The cultural resources study included a records search, Sacred Lands File search, Native American outreach, a review of historic aerial photographs and maps, and a pedestrian survey of the project Area of Potential Effect (APE). The APE consists of the approximately 10.32-acre project parcel (Assessor's Parcel Number [APN] 232-09-072-00) in which the MFRO Facility would be constructed as well as onsite pipeline connections, and a product water pipeline route along Washington Avenue. This report details the methods and results of the cultural resources study and has been prepared to comply with the California Environmental Quality Act (CEQA) and the Section 106 of the National Historic Preservation Act (NHPA), as amended. The City will serve as lead agency for compliance with CEQA.

The records search conducted by the South Coastal Information Center (SCIC) on March 25, 2019, and by HELIX at the SCIC on October 16, 2019, indicated that 39 previous cultural resources studies have been conducted within a half-mile of the project APE, six of which overlap with the project area, but none that included pedestrian survey of the project parcel. The records search results also indicated that a total of 70 cultural resources have been previously recorded within a half-mile of the project APE. The resources include one prehistoric isolate and 69 historic buildings. Ten of the historic buildings are plotted at the SCIC along West Washington Avenue within the APE. However, all of the buildings are more accurately located outside of the APE, which encompasses the road right-of-way. In addition, a review of historic and modern aerial imagery shows that these buildings with the exception of P-37-019692 (located at 201 West Washington Avenue) have been demolished since being recorded in the 1980s. The building recorded as P-37-019692 appears to still be in existence; however, it is set back in the lot over 150 feet (45 meters) beyond the APE. The Native American Heritage Commission (NAHC) was contacted on February 21, 2019 for a Sacred Lands File search. The response, received on February 27, 2019, noted that a search was completed for the APE with positive results. The San Luis Rey Band of Mission Indians indicated that sensitive discoveries have occurred immediately north of the Escondido Creek channel, and that the project area is considered sensitive to the tribe.

The field investigations included intensive pedestrian survey of the project parcel by a HELIX archaeologist and Luiseño and Kumeyaay Native American monitors on March 5, 2019. The survey did not result in the identification of any cultural material within the parcel. A pedestrian survey was not undertaken for the 1-mile long product water pipeline situated along West Washington Avenue; the APE along the pipeline route is defined by the road right-of-way; as such is covered in asphalt and/or concrete with no visible ground to survey.

Based on the results of the current study, no historic properties will be affected by the project. However, due to the cultural sensitivity of the project region, the positive Sacred Land Files results, and the alluvial setting of the APE, it is recommended that grading activities be monitored by a qualified archaeologist and a Native American monitor.

1.0 INTRODUCTION

1.1 PROJECT LOCATION AND DESCRIPTION

HELIX Environmental Planning, Inc. (HELIX) conducted a cultural resource study of the City of Escondido's (City) Membrane Filtration Reverse Osmosis (MFRO) Facility Project (project). The MFRO Facility would provide advanced treatment for Title 22 quality reuse water produced at the Hale Avenue Resources Recovery Facility (HARRF).

The MFRO Facility would be constructed within an approximately 10.3-acre City-owned parcel (Assessor's Parcel Number [APN] 232-090-72-00) located at 901 West Washington Avenue, in the City of Escondido in north-central San Diego County (Figure 1, *Regional Location*). The project is located on the Escondido and Valley Center U.S. Geological Survey (USGS) 7.5-minute topographical maps, within an unsectioned portion of the Rincon del Diablo Land Grant (Figure 2, *Project Location* [*USGS Topography]*). The parcel is located to the east of Interstate (I-15) and south of State Route (SR) 78, immediately north of the SPRINTER rail line (Figure 3, *Project Location* [*Aerial Photograph]*). The site is currently developed with a single-wide trailer used by the City's recycling group, one quadruple wide trailer previously used for training by various City departments, a metal storage building and an asphalt paved parking lot. The remainder of the site is used by the City Public Works and Utilities Departments for storage and heavy equipment training, except for a location on the west side that is used by EDCO, a waste disposal corporation, for the storage of empty roll-off bins. The site is accessible via a driveway along West Washington Avenue and a shared access driveway with two gated entrances towards the western side of the property. The site also is accessible towards the southeastern corner of the property from a bridge across the concrete flood control channel that connects the site to the City's Public Works Yard.

The City proposes to construct and operate the MFRO Facility to provide product water for agricultural use. The facility would utilize membrane filtration and reverse osmosis technologies sized for a total production capacity of 2.0 million gallons per day (mgd). High quality treated water would be blended with Title 22 recycled water within an on-site blend tank. The water would then be sent through the existing non-potable reuse water/agriculture pipelines and distributed to growers for use in agricultural production.

The proposed project would consist of an approximately 25,000-square foot commercial/industrial-like building (MFRO Facility), that would include partitioned areas to house the MFRO equipment, pumps, electrical room, and control room (Figure 4, *Site Plan*). The chemicals would be in a covered area adjacent to the MFRO building with two enclosed walls, and chain link fence on the other two sides. The MFRO Facility would be designed to accommodate installation of additional equipment in the future that would provide additional production capacity. The project would connect to the existing influent pipeline located adjacent to the Escondido Creek concrete-lined Flood Control Channel along the southern side of the project site; these connections would not encroach within Reidy Creek (Figure 5, *Project Components*).

The project would also include the product water pipeline, which is a one (1)-mile long pipeline that would transport the product water to an existing recycled water pipeline (Figure 5). The 24-inch diameter pipeline would exit on the northeast corner of the MFRO Facility and head east along West Washington Avenue. The pipeline would cross Reidy Creek, then Caltrans ROW between North Broadway and Waverly Place. The pipeline would turn south at Waverly Place and connect to the

existing 24-inch ductile iron pipe located within the roadway ROW north of Escondido Creek. No project components would encroach within the creek channel.

The maximum trench depth for the onsite pipeline connections and the product water pipeline would be 8.5 feet deep. The maximum trench width would be 6 feet wide (12 inches clear on each side of a 24-inch pipe).

1.2 REGULATORY FRAMEWORK

The project is seeking funding from the Drinking Water State Revolving Fund for a portion of the construction work. As such, the project is subject to review by the State Water Resources Control Board (SWRCB). Thus, this cultural resources study addresses the requirements of both the National Historic Preservation Act (NHPA) and the California Environmental Quality Act (CEQA). The City will serve as lead agency for compliance with CEQA.

1.2.1 National Historic Preservation Act

Section 106 of the National Historic Preservation Act of 1966 (NHPA) requires federal agencies to take into account the effects of their undertakings on historic properties and afford the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment. The historic preservation review process mandated by Section 106 is outlined in regulations issued by ACHP. Revised regulations, "Protection of Historic Properties" (36 Code of Federal Regulations [CFR] Part 800), became effective August 5, 2004. In the case of this project, the agency is SWRCB, as the funding agency, which must abide by the requirements of Section 106 and consult with the State Historic Preservation Officer (SHPO).

Historic properties are properties that are included in the National Register of Historic Places (NRHP; National Register) or those that meet the criteria for inclusion in the NRHP, as outlined below. If the agency's undertaking could affect historic properties, the agency determines the scope of appropriate identification efforts and then proceeds to identify historic properties in the Area of Potential Effects (APE). The agency reviews background information, consults with the SHPO or Tribal Historic Preservation Officer (THPO) and others, seeks information from knowledgeable parties, and conducts additional studies as necessary. Districts, sites, buildings, structures, and objects listed in the National Register are considered; unlisted properties are evaluated against the National Park Service's published criteria, in consultation with the SHPO/THPO and any Indian tribe or Native Hawaiian organization that may attach religious or cultural importance to them.

Section 106 review gives equal consideration to properties that have been included in the NRHP and those that have not been but that meet NRHP criteria. Section 60.6 of 36 CFR Part 60 presents the criteria for the evaluation of cultural resources for nomination to the NRHP as follows:

The quality of significance in American history, architecture, archaeology, and culture is present in districts, sites, buildings, structures, and objects of state and local importance that possess integrity of location, design, setting, materials, workmanship, and association, and

a) That are associated with events that have made a significant contribution to the broad patterns of our history; or

b) That are associated with the lives of persons significant in our past; or

c) That embody the distinctive characteristics of a type, period or method or construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

d) That have yielded, or may be likely to yield, information important in prehistory or history (36 CFR Part 60).

1.2.2 California Environmental Quality Act

Under CEQA, any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (CRHR) (Public Resources Code [PRC] §5024.1, Title 14 California Code of Regulations [CCR] Section 4852), including the following:

A (1): Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

B (2): Is associated with the lives of persons important in our past;

C (3): Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values, or:

D (4): Has yielded or may be likely to yield information important in prehistory or history.

Cultural resources eligible for the CRHR are considered significant resources, and impacts to them are significant environmental effects under CEQA.

1.2.3 City of Escondido General Plan

Goals and policies regarding Cultural Resources within the City of Escondido General Plan (City of Escondido 2012) include the following:

GOAL 5: Preservation of important cultural and paleontological resources that contribute to the unique identity and character of Escondido.

Cultural Resources Policy 5.1: Maintain and update the Escondido Historic Sites Survey to include significant resources that meet local, state, or federal criteria.

Cultural Resources Policy 5.2: Preserve significant cultural and paleontological resources listed on the national, State, or local registers through: maintenance or development of appropriate ordinances that protect, enhance, and perpetuate resources; incentive programs; and/or the development review process.

Cultural Resources Policy 5.3: Consult with appropriate organizations and individuals (e.g., South Coastal Information Center of the California Historical Resources Information System, Native American Heritage Commission, Native American groups and individuals, and San Diego Natural History Museum) early in the development process to minimize potential impacts to cultural and paleontological resources.

Cultural Resources Policy 5.4: Recognize the sensitivity of locally significant cultural resources and the need for more detailed assessments through the environmental review process.

Cultural Resources Policy 5.5: Preserve historic buildings, landscapes, and districts with special and recognized historic or architectural value in their original locations through preservation, rehabilitation (including adaptive reuse), and restoration where the use is compatible with the surrounding area.

Cultural Resources Policy 5.6: Review proposed new development and/or remodels for compatibility with the surrounding historic context.

Cultural Resources Policy 5.7: Comply with appropriate local, State, or federal regulations governing historical resources.

Cultural Resources Policy 5.8: Consider providing financial incentives, and educational information on existing incentives provided by the federal government to private owners and development in order to maintain, rehabilitate, and preserve historic resources.

Cultural Resources Policy 5.9: Educate the public on the City's important historic resources in increase awareness for protection.

1.2.4 City of Escondido Local Register/Local Landmark Criteria

The procedure and criteria for register listing or local landmark designation is provided in the City's Municipal Code, Article 40, Section 33-794:

> Prior to granting a resource local register or historical landmark status, the HPC [Historic Preservation Commission] shall consider the definitions for historical resources and historical districts and shall find that the resource conforms to one (1) or more of the criteria listed in this section. A structural resource proposed for the local register shall be evaluated against criteria number one (1) through seven (7) and must meet at least two (2) of the criteria. Signs proposed for the local register shall meet at least one (1) of the criteria numbered eight (8) through ten (10). Landscape features proposed for the local register shall meet criterion number eleven (11). Archaeological resources shall meet criterion number twelve (12). Local register resources proposed for local landmark designation shall be evaluated against criterion number thirteen (13). The criteria are as follows:
>
> (1) Escondido historical resources that are strongly identified with a person or persons who significantly contributed to the culture, history, prehistory, or development of the City of Escondido, region, state or nation;
>
> (2) Escondido building or buildings that embody distinguishing characteristics of an architectural type, specimen, or are representative of a recognized architect's work and are not substantially altered;

(3) Escondido historical resources that are connected with a business or use that was once common but is now rare;

(4) Escondido historical resources that are the sites of significant historic events;

(5) Escondido historical resources that are fifty (50) years old or have achieved historical significance within the past fifty (50) years;

(6) Escondido historical resources that are an important key focal point in the visual quality or character of a neighborhood, street, area or district;

(7) Escondido historical building that is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type;

(8) Sign that is exemplary of technology, craftsmanship or design of the period when it was constructed, uses historical sign materials and is not significantly altered;

(9) Sign that is integrated into the architecture of the building, such as the sign pylons on buildings constructed in the Modem style and later styles;

(10) Sign that demonstrates extraordinary aesthetic quality, creativity, or innovation;

(11) Escondido landscape feature that is associated with an event or person of historical significance to the community or warrants special recognition due to size, condition, uniqueness or aesthetic qualities;

(12) Escondido archaeological site that has yielded, or may be likely to yield, information important in prehistory;

(13) Escondido significant historical resource that has an outstanding rating of the criteria used to evaluate local register requests. (Ord. No. 2000-23, §4, 9-13-00; Ord. No. 2008-16, §4, 7-16-08; Ord. No. 2016-15, §4, 10-26-16)

1.2.5 Native American Heritage Values

Federal and state laws mandate that consideration be given to the concerns of contemporary Native Americans with regard to potentially ancestral human remains, associated funerary objects, and items of cultural patrimony. Consequently, an important element in assessing the significance of the study site has been to evaluate the likelihood that these classes of items are present in areas that would be affected by the proposed project.

Potentially relevant to prehistoric archaeological sites is the category termed Traditional Cultural Properties (TCP) in discussions of cultural resource management (CRM) performed under federal auspices. According to Patricia L. Parker and Thomas F. King (1998), “Traditional” in this context refers to those beliefs, customs, and practices of a living community of people that have been passed down through the generations, usually orally or through practice. The traditional cultural significance of a historic property, then, is significance derived from the role the property plays in a community’s historically rooted beliefs, customs, and practices. Cultural resources can include TCPs, such as gathering areas, landmarks, and ethnographic locations, in addition to archaeological districts. Generally, a TCP

may consist of a single site, or group of associated archaeological sites (district or traditional cultural landscape), or an area of cultural/ethnographic importance.

In California, the Traditional Tribal Cultural Places Bill of 2004 requires local governments to consult with Native American Tribes during the project planning process, specifically before adopting or amending a General Plan or a Specific Plan, or when designating land as open space for the purpose of protecting Native American cultural places. The intent of this legislation is to encourage consultation and assist in the preservation of Native American places of prehistoric, archaeological, cultural, spiritual, and ceremonial importance. State Assembly Bill (AB) 52, effective July 1, 2015, introduced the Tribal Cultural Resource (TCR) as a class of cultural resource and additional considerations relating to Native American consultation into CEQA. As a general concept, a TCR is similar to the federally defined TCP; however, it incorporates consideration of local and state significance and required mitigation under CEQA. A TCR may be considered significant if included in a local or state register of historical resources; or determined by the lead agency to be significant pursuant to criteria set forth in PRC §5024.1; or is a geographically defined cultural landscape that meets one or more of these criteria; or is a historical resource described in PRC §21084.1, a unique archaeological resource described PRC §21083.2; or is a non-unique archaeological resource if it conforms with the above criteria.

1.3 AREA OF POTENTIAL EFFECT

Pursuant to 36 CFR 800.4(a)(1), the APE is the geographic area within which an undertaking may directly or indirectly alter the character or use of historic properties. The APE for the project totals approximately 17.2 acres and encompasses the MFRO Facility site within APN 232-090-72-00, the recycled water, sewer, and brine pipeline connections, and the product water pipeline route (Figure 5). The portion of the APE for the product water pipeline route consists of the entire West Washington Avenue road right-of-way, as the exact location of the pipeline within the roadway has not yet been established.

Facility site access would be provided on the west side of the parcel, from a driveway off of West Washington Avenue. Construction staging for the project would occur on-site. It is anticipated that soil import/export would be limited via a balanced grading plan; onsite soils are anticipated as suitable for fill. Any disposal of the excavated materials would be disposed of at an appropriate permitted disposal site depending on the type of material.

As described above, the maximum trench depth for the recycled water, sewer, and brine pipeline connections and the product water pipeline would be 8.5 feet deep.

1.4 PROJECT PERSONNEL

Stacie Wilson, M.S., RPA served as principal investigator and is the primary author of this technical report. Ms. Wilson meets the qualifications of the Secretary of Interior's Standards and Guidelines for archaeology. Mary Robbins-Wade, M.A, RPA provided overall project management support and senior technical review. Julie Roy, B.A. conducted the field survey. Ali'i Suiaunoa (Luiseño Native American monitor) from Saving Sacred Sites and Gabe Kitchen (Kumeyaay Native American monitor) from Red Tail Environmental participated in the pedestrian survey. Resumes for key project personnel are presented in Appendix A.

2.0 PROJECT SETTING

2.1 NATURAL SETTING

The project is located within the coastal foothills of northern San Diego County within the watershed of Escondido Creek. The project area is flat, with an elevation of approximately 635 feet above mean sea level (AMSL). Geologically, the project area is primarily underlain by old alluvial flood-plain deposits from the late to middle Pleistocene, with the southeastern corner of the parcel being underlain by younger alluvial deposits from Reidy Creek, a tributary of the Escondido Creek (Kennedy and Tan 2007; Tan and Kennedy 1999). Although the recent geologic maps and the 1996 Escondido USGS 7.5-minute topographic map (Figure 2) show this tributary traveling to the east of the project parcel and joining with Escondido Creek immediately to the southeast of the project, historic aerials and topographic maps show it further to the west, within the project site, suggesting a greater presence of young alluvial deposits within the APE than mapped.

The majority of the project site is mapped with Visalia sandy loam, 2 to 5 percent slopes (USDA 2017). The Visalia series of soils is characterized by moderately well-drained, very deep sandy loams and are formed from granitic alluvial deposits (Bowman 1973). Visalia soils generally support vegetation such as annual grasses, chamise *(Adenostoma fasciculatum)*, flattop buckwheat *(Eriogonum fasciculatum)*, California live oak *(Quercus agrifolia)* and scrub oak *(Quercus berberidifolia)* (Bowman 1973), which would have been utilized by native populations for food, medicine, tools, and ceremonial and other uses (Bean and Shipek 1978; Hedges and Beresford 1986). Prehistorically, Escondido Creek would have provided an excellent seasonal water source for local Native American populations. The accompanying riparian environment of Escondido Creek and the foothills in the surrounding area held a variety of resources, as well as habitat for wildlife, which would have been utilized in multiple ways by these inhabitants.

2.2 CULTURAL SETTING

2.2.1 Prehistoric Period

The earliest well-documented sites in the San Diego area belong to the San Dieguito Tradition, dating to over 9,000 years ago (Warren 1967; Warren et al. 1998; Warren and Ore 2011). The San Dieguito Tradition is thought by most researchers to have an emphasis on big game hunting and coastal resources (Warren 1967). Diagnostic material culture associated with the San Dieguito complex includes scrapers, scraper planes, choppers, large blades, and large projectile points (Rogers 1939; Warren 1967). In the southern coastal region, the traditional view of San Diego prehistory has the San Dieguito Tradition followed by the Archaic Period, dating from circa 8600 years Before Present (BP) to circa 1300 BP (Warren et al. 1998).

A large number of archaeological site assemblages dating to this period have been identified at a range of coastal and inland sites. These assemblages, designated as the La Jolla/Pauma complexes, are considered part of Warren's (1968) "Encinitas tradition" and Wallace's (1955) "Early Milling Stone Horizon." The Encinitas tradition is generally "recognized by millingstone assemblages in shell middens, often near sloughs and lagoons" (Moratto 1984:147) and brings a shift toward a more generalized economy and an increased emphasis on seed resources, small game, and shellfish. The local cultural manifestations of the Archaic period are called the La Jolla complex along the coast and the Pauma

complex inland. Pauma complex sites lack the shell that dominates many La Jolla complex site assemblages. Sites dating to the Archaic Period are numerous along the coast, near-coastal valleys, and around estuaries. In the inland areas of San Diego County, sites associated with the Archaic Period are less common relative to the Late Prehistoric complexes that succeed them (Cooley and Barrie 2004; Laylander and Christenson 1988; Raven-Jennings and Smith 1999; True 1970). The La Jolla/Pauma complex tool assemblage is dominated by milling tools (manos and metates) and rough cobble tools, especially choppers and scrapers (Moriarty 1966). The La Jolla/Pauma complex assemblage also includes flexed burials, doughnut stones, discoidals, stone balls, plummets, biface points, beads bone tools, and terrestrial and marine mammal remains (True 1958, 1980).

While there has been considerable debate about whether San Dieguito and La Jolla patterns might represent the same people using different environments and subsistence techniques, or whether they are separate cultural patterns (e.g., Bull 1983; Ezell 1987; Gallegos 1987; Warren et al. 1998), abrupt shifts in subsistence and new tool technologies occur at the onset of the Late Prehistoric Period (1500 BP to AD 1769). The Late Prehistoric period is characterized by higher population densities and intensification of social, political, and technological systems. The Late Prehistoric period is represented by the San Luis Rey complex in the northern portion of San Diego County and the Cuyamaca complex in the southern portion. Late Prehistoric artifactual material is characterized by arrow points, Tizon Brownware pottery, various cobble-based tools (e.g., scrapers, choppers, and hammerstones), arrow shaft straighteners, pendants, manos and metates, and mortars and pestles. The arrow point assemblage is dominated by the Desert Side-notched and Cottonwood Triangular points, but the Dos Cabezas Serrated type also occurs (Wilke and McDonald 1986). Subsistence is thought to be focused on the utilization of acorns and grass seeds, with small game serving as a primary protein resource and big game as a secondary resource. Fish and shellfish were also secondary resources, except immediately adjacent to the coast, where they assumed primary importance (Bean and Shipek 1978; Sparkman 1908). The settlement system is characterized by seasonal villages where people used a central-based collecting subsistence strategy.

2.2.2 Ethnohistory

Based on ethnographic data, two linguistically distinct populations, the Hokan-based Yuman-speaking peoples (Kumeyaay) and the Takic-speaking peoples (Luiseño), inhabited the northern San Diego County area. The name Luiseño derives from Mission San Luis Rey de Francia and has been used to refer to the Indian people associated with that mission, while the Kumeyaay people are also known as Ipai, Tipai, or Diegueño (named for Mission San Diego de Alcala). At the time of European contact, ethnographic data have suggested that the project location is situated in an area marginal to the territories defined for the Kumeyaay and the Luiseño. Agua Hedionda Creek, extending east from the coast and located north of the project, has for example, often been described as the division between the territories of the Luiseño and the Kumeyaay people (Bean and Shipek 1978; Luomala 1978; White 1963), but Kroeber (1925) has the boundary farther south, with Luiseño territory encompassing the Escondido area.

While no ethnographically documented Indian villages are known to have been located in immediate proximity to the project area, Kroeber (1925:Plate 57) indicates that two Indian villages, *Mehel-om-pom-pauvo* and *Panakare*, may have been located to the east in the area of uppermost Escondido Creek, and another village, *Shikapa*, may also have been located to the west along San Marcos Creek. Kroeber indicates that these villages were all Luiseño. Kroeber (1925:Plate 57) and Trafzer and Carrico (1992:53) also indicate that three other villages, *Sinyau-Pichkara*, *Ahmukatlkatl*, and *Hapai*, were located along the San Dieguito River to the south of the project, and that these were Diegueño (Kumeyaay [Ipai]) villages.

While the exact locations for most of these villages are uncertain, two, *Sinyau-Pichkara* (San Bernardo) and *Ahmukatlkatl* (San Pascual), are known historically (Trafzer and Carrico 1992:52–53). The closest of these, *Sinyau-Pichkara,* would have been located approximately 5 miles to the south of the project site. While these latter two villages were historically associated with the Kumeyaay, Trafzer and Carrico (1992:52–53) note that "the Kumeyaay and Luiseño both revere a site (possibly *Sinyau-Pichkara)* near present-day Rancho Bernardo," indicating that the boundary between these two peoples has likely varied over time.

The Luiseño followed a seasonal gathering cycle, with bands occupying a series of campsites within their territory (Bean and Shipek 1978; White 1963). The Luiseño lived in semi-sedentary villages usually located along major drainages, in valley bottoms, and also on the coastal strand, with each family controlling gathering areas (Bean and Shipek 1978; Sparkman 1908; White 1963). Major Luiseño villages were present along the Santa Margarita River Valley and the San Luis Rey River Valley (Bean and Shipek 1978; Kroeber 1925; Sparkman 1908:190; White 1963). The predominant determining factor for placement of villages and campsites was areas where water was readily available, preferably on a year-round basis (True 1990). The Kumeyaay depended on seeds, acorns, nuts, beans, and berries. Large and small game was hunted with bows and arrows, and fishing occurred at rivers and the Pacific Ocean (Luomala 1978). Like the Luiseño, the Kumeyaay utilized different resource areas depending on the season, and a significant determining factor for placement of villages and campsites was areas where water was readily available, preferably on a year-round basis. They sometimes inhabited larger villages during winter or summer months. The clans had access to their own land and resources (Kroeber 1925).

2.2.3 Historical Background

Coastal Southern California's historic period began in September 1542 when Juan Rodriguez Cabrillo landed on Santa Catalina Island as part of his exploration expedition up the coast north of "New Spain." Although the impact of this initial contact did not usher in instant changes in the region, it marks the opening of the area to new contact, colonialism, and cultural shifts.

2.2.3.1 Spanish Period

During the mid-eighteenth century, Spain escalated its involvement in California from exploration to colonization (Weber 1992). In 1769, a Spanish expedition headed by Gaspar de Portolá and Junípero Serra traveled north from San Diego seeking suitable locations to establish military presidios and religious missions in order to extend the Spanish Empire into Alta California. The Presidio of San Diego and Mission San Diego de Alcalá were established in 1769 followed by the Presidio of Monterey and Mission San Carlos Borromeo de Carmelo in 1770 in northern California. The missions and presidios stood, literally and figuratively, as symbols of Spanish colonialism, importing new systems of labor, demographics, settlement, and economies to the area. Agriculture and animal husbandry were the main pursuits of the Missions.

Missions San Juan Capistrano and San Luis Rey de Francia, established in 1776 and 1798 respectively, claimed a large part of northern San Diego and southwestern Riverside counties. On the coast, the Luiseño and the Kumeyaay people were moved into the Mission environment where living conditions and diseases promoted the decline of the native populations (Bean and Shipek 1978). However, throughout the Spanish Period, the influence of the Spanish progressively spread further from the coast and into the inland areas of southern California as the missions extended their influence into the surrounding regions and used the lands for grazing cattle and other animals. In the 1810s, ranchos and

mission outposts, called *asistencias*, were established near the project area, increasing the amount of Spanish contact in the inland region. An asistencia was established in Pala in 1816 and in Santa Ysabel in 1818.

2.2.3.2 Mexican Period

Mexico, including Alta California, gained its independence from Spain in 1821, but Spanish culture and influence remained as the missions continued to operate as they had in the past, and laws governing the distribution of land were also retained for a period of time. Following secularization of the missions in 1834, large ranchos were granted to prominent and well-connected individuals, ushering in the Rancho Era, with the society making a transition from one dominated by the church and the military to a more civilian population, with people living on ranchos or in pueblos. With the numerous new ranchos in private hands, cattle ranching expanded and prevailed over agricultural activities. The project site is situated within the 12,653-acre Rincon del Diablo rancho, granted to Juan Bautista Alvarado in circa 1843. The origin of Rincon del Diablo name, meaning "Corner of the Devil," is unknown; however, one suggestion is that because this land was not under the control of the local missions during the Mission Period, it belonged to the devil (Whetstone 1963). Alvarado built an adobe residence, and he raised cattle on the rancho.

These ranches put new pressures on California's native populations, forcing them to acculturate or relocate farther into the back-country. In rare instances, former mission neophytes were able to organize pueblos and attempt to live within the new confines of Mexican governance and culture. The most successful of these was the Pueblo of San Pasqual, located inland along the San Dieguito River Valley, founded by Kumeyaay who were no longer able to live at the Mission San Diego de Alcalá (Carrico 2008; Farris 1994).

2.2.3.3 American Period

American governance began in 1848, when Mexico signed the Treaty of Guadalupe Hidalgo, ceding California to the United States at the conclusion of the Mexican–American War. A great influx of settlers to California and the San Diego region occurred during the American Period, resulting from several factors, including the discovery of gold in the state in 1848, the end of the Civil War, the availability of free land through passage of the Homestead Act, and later, the importance of San Diego County as an agricultural area supported by roads, irrigation systems, and connecting railways. The increase in American and European populations quickly overwhelmed many of the Spanish and Mexican cultural traditions, and greatly increased the rate of population decline among Native American communities.

While the American system required that the newly acquired land be surveyed prior to settlement, the Treaty of Guadalupe Hidalgo bound the United States to honor the land claims of Mexican citizens who were granted ownership of ranchos by the Mexican government. The Land Act of 1851 established a board of commissioners to review land grant claims, and land patents for the land grants were issued from 1876 to 1893. A claim for the Rancho Rincon del Diablo was filed in 1852, with the grant patented to Alvarado's heirs of in 1872. However, the rancho lands had already been sold to a San Diego judge, Oliver S. Witherby in the 1850s, who sold it to John, Matthew, and Josiah Wolfskill and Edward McGearey in 1868. The three brothers and McGearey had bought the land for raising sheep. The property changed ownership again in 1883, and the primary land use switched to growing grapes. In 1886, the rancho lands were deeded to the Escondido Land & Town Company, who platted a town site and sold properties.

Escondido was incorporated as a city in 1888, with 249 residents (Walter 2010). Offering free land to anyone who would build a church or school, the community soon had an elementary school, a large seminary built by the University of Southern California, and several churches. The Escondido Land & Town Company also sponsored the creation of a local newspaper, which was primarily used as an advertising tool targeting mid-western farmers to Escondido (Escondido History Center 2019). As the community grew, a formal cemetery was needed, and Oak Hill Memorial Park (formerly called Oak Hill Cemetery) was established in 1889.

The Escondido region saw little change but continued as a major citrus producing area in San Diego County until the 1950s (Van Wormer 2005). Citrus and grapes remained the main crops, with avocado orchards appearing in the 1920s. Most residential development through the end of the nineteenth century consisted of "mini farms," with the early commercial downtown area growing along Grand Avenue. Early twentieth century residential neighborhoods were concentrated south of Grand Avenue and can be seen in today's Old Escondido Historic District. The mid-1940s saw the peak of the citrus harvest, and the population reached approximately 5,000 by this time (City of Escondido, n.d.).

Highway 395 was completed through the City in the 1950s, linking Escondido to San Diego. With convenient access to San Diego established, population and development in the region boomed, and many citrus groves became housing subdivisions (Escondido History Center 2019). The citrus industry continued to decline in the 1960s, with an increasing number of groves being converted to avocado groves, housing subdivisions, or commercial and civic development. The population of the City increased dramatically over the following decades, with more than 16,000 residents present by 1960, and more than 36,000 residents present by 1970 (Escondido History Center 2019). During this time, Escondido Boulevard became a commercial strip, with strip malls and large shopping centers prevailing farther out (City of Escondido, n.d.).

San Diego Central Railroad (also known as California Central Railway; Southern California Railroad; Atchison Topeka Santa Fe Railroad; and San Diego Northern Railway)

The rail line between Escondido Junction, located just south of Oceanside, and Escondido was built as a branch of the California Central Railway. The idea for the railroad began with the San Diego Central Railroad, incorporated on November 8, 1886. The originally proposed route was from the San Diego Bay north to Poway, up through Escondido, and then west to Oceanside. However, only the Oceanside to Escondido portion, via San Marcos and Vista, was ever built; the 21.23-mile rail line was expanded and completed by the California Central Railway in December of 1887 (Vivian 1891).

Back in 1884, the California Southern Railroad, linking the cities of National City and San Diego to San Bernardino via Oceanside, had become a subsidiary of Santa Fe railroad (Lowell 1985). Following the completion of the California Southern Railroad in 1885 up through the Cajon Pass to Barstow to a junction of the Atlantic and Pacific Railroad, San Diego County entered a period of marked growth. During this time, Santa Fe officials consolidated their family of railroads in southern California, forming the California Central Railway in 1887. Although the California Southern remained an individual subsidiary at the time, the bust that quickly followed the boom resulted in the California Southern Railroad, the California Central Railway, and the Redondo Beach Railway consolidating in 1889. The resulting corporation was the Southern California Railway Company, wholly owned by Santa Fe (Price 1988). This is the name that appears on the historic topographic maps for the San Diego Central Railroad from the 1800s through 1940s. It was not until 1906 that all of lines of Southern California Railway

Company were deeded to the Atchison, Topeka and Santa Fe Railway Company. Topographic maps from the 1940s on depict the railways as the "Atchison Topeka and Santa Fe Railroad."

3.0 ARCHIVAL RESEARCH AND CONTACT PROGRAM

3.1 RECORDS SEARCH

HELIX obtained a record search of the California Historical Resources Information System (CHRIS) from the South Coastal Information Center (SCIC) on March 25, 2019. HELIX conducted a supplemental search at the SCIC on October 16, 2019 to extend the search radius around the product water pipeline route. The records search covered a half-mile radius around the project APE and included the identification of previously recorded cultural resources and locations and citations for previous cultural resources studies. A review of the California Historical Resources and the State Office of Historic Preservation (OHP) historic properties directories was also conducted. The records search summary and maps are included as Appendix B (Confidential Appendices, bound separately).

3.1.1 Previous Surveys

The records search results identified 39 previous cultural resource studies within the record search limits, six of which cover or overlap with the project APE (Table 1, *Previous Studies Within a Half-Mile of the Project APE*). Two of the overlapping studies consist of Draft Environmental Impact Reports (EIRs) that cover the entirety of the search radius. The first of these was conducted in 1980 for the Expansion of Wastewater Treatment Facility Project (City of Escondido 1980); the other study includes appendices for the Reclaimed Water Distribution System Project Draft EIR (Keller Environmental Associates, Inc. [KEA] 1992). The remaining studies include a survey report on historic/cultural Resources within the City (Donald A. Cotton Associates 1983), studies conducted for the North Inland Residential Crisis Center (Gorman 2014) and the San Diego 129 Project (Brunzell 2017), and a cultural resources study for a proposed ballpark within the same parcel as the proposed MFRO Facility Project (Robbins-Wade 2010). This study, however, was only a constraint analysis and did not include a pedestrian survey.

* Overlaps with APE

3.1.2 Previously Recorded Sites

The SCIC has a record of 70 previously recorded cultural resources within a half-mile radius of the project parcel (Table 2, *Previously Recorded Resources Within a Half-Mile of the Project APE*). Overall, the cultural resources documented within the records search radius consist of one prehistoric isolate and 69 historic buildings. In addition to these 69 buildings with assigned Primary numbers, multiple other historic addresses are present within the records search radius that have not been formally recorded or assigned Primary numbers. Ten of the historic buildings on file at the SCIC are plotted along West Washington Avenue within the product water pipeline APE. However, all of the buildings are more accurately located outside of the APE, which encompasses the road right-of-way. In addition, a review of historic and modern aerial imagery shows that these buildings with the exception of P-37-019692 (located at 201 West Washington Avenue) have been demolished since recordation in 1983. The building recorded as P-37-019692 appears to still be in existence; however, it is set back in the lot over 150 feet (45 meters) beyond the APE.

Table 2
PREVIOUSLY RECORDED RESOURCES WITHIN A HALF-MILE OF THE PROJECT APE

Resource Number	Age and Resources Present	Description	Recorder, Date
P-37-015577	Prehistoric Isolate	Lithic debitage and ground stone fragment consisting of a porphyritic metavolcanic flake and a granitic mano fragment	James, Bark, and Cooley, 1996
P-37-017746	Historic Building	Residence; constructed in the California Bungalow architectural style circa (c.) 1925. Building has been altered	Marsh, 1983
P-37-017747	Historic Building	Residence; constructed in the Craftsman Cottage architectural style c. 1915	Marsh, 1983
P-37-017780	Historic Building	Residence; constructed in the California Bungalow architectural style c. 1925	Marsh, 1983
P-37-017781	Historic Building	Residence; constructed in the Clapboard Cottage architectural style c. 1925	Marsh, 1983
P-37-019336	Historic Building	Residence; constructed in the California Bungalow architectural style c. 1910	Marsh, 1983
P-37-019368	Historic Building	Residence; constructed in the Moderne architectural style c. 1940	Marsh, 1983
P-37-019369	Historic Building	Feed store; constructed in the Stucco Storefront architectural style c. 1920	Leary, 1983
P-37-019370	Historic Building	Railroad station; constructed in the Eastlake architectural style in 1887	Marsh, 1983
P-37-019371	Historic Building	Residence; constructed in the Italianate architectural style c. 1890	Marsh, 1983
P-37-019372	Historic Building	Residence; constructed in the Greek Revival Cottage architectural style c. 1890	Marsh, 1983
P-37-019436	Historic Building	Industrial building; constructed in the Regional Vernacular architectural style c. 1930	Leary, 1983
P-37-019455	Historic Building	Residence; constructed in the Craftsman architectural style c. 1911	Marsh, 1983
P-37-019526	Historic Building	Storage space originally utilized as a barn; constructed c. 1900	Leary, 1983
P-37-019527	Historic Building	Residence; constructed in the Victorian architectural style c. 1890	Leary, 1983
P-37-019528	Historic Building	Bar/restaurant originally utilized as an ice house; constructed c. 1920	Leary, 1983
P-37-019558	Historic Building	Storage shed originally utilized as a shed and barn; constructed c. 1920	Leary, 1983
P-37-019559	Historic Building	Residence; constructed in the Cottage architectural style c. 1920s	Leary, 1983
P-37-019560	Historic Building	Residence; constructed in the Adobe Bungalow architectural style c. 1920	Leary, 1983
P-37-019561	Historic Building	Commercial, ancillary; currently named RCP Block and Brick, historically named Escondido Cement Products; constructed in the Spanish and Quonset hut-type architectural style c. 1930	Leary, 1983; Dolan, 2002

Table 2 (cont.)

P-37-019691*	Historic Building	Residence; constructed in the California Bungalow architectural style c. 1930s	Leary, 1983
P-37-019692*	Historic Building	Residence; constructed in the California Bungalow architectural style c. 1930s	Leary, 1983
P-37-019693*	Historic Building	Residence; constructed in the Cottage architectural style c. 1900	Leary, 1983
P-37-019694*	Historic Building	Residence; constructed in the Victorian architectural style c. 1900.	Leary, 1983
P-37-019695*	Historic Building	Residence; constructed c. 1920s	Leary, 1983
P-37-019696*	Historic Building	Residence; constructed in the Cottage architectural style c. 1930s	Leary, 1983
P-37-019697*	Historic Building	Residence; constructed in the Cottage architectural style c. 1930s	Leary, 1983
P-37-019698*	Historic Building	Residence; constructed c. 1920s	Leary, 1983
P-37-019699*	Historic Building	Residence; constructed in the Italianate architectural style pre-1895	Leary, 1983
P-37-019700	Historic Building	Barn; constructed c. 1940	Leary, 1983
P-37-035447	Historic Building	Public utility building; constructed in the Modern architectural style c. 1960	Crawford, 2013
P-37-036142	Historic Building	Escondido Branch Building (part of the campus complex of the Inland Public Health Center), constructed in the Mid-Century Modern architectural style in 1954	Gorman and Davis, 2014

Table 2 (cont.)
PREVIOUSLY RECORDED RESOURCES WITHIN A HALF-MILE OF THE PROJECT APE

Resource Number	Age and Resources Present	Description	Recorder, Date
P-37-036143	Historic Building	Escondido Health Center. (part of the campus complex of the Inland Public Health Center), constructed in the Mid-Century Modern architectural style in 1958	Gorman and Davis, 2014
P-37-036144	Historic Building	Escondido Welfare Building (part of the campus complex of the Inland Public Health Center), constructed in the Mid-Century Modern architectural style in 1968	Gorman and Davis, 2014
P-37-036400	Historic Building	Motel; historically named Pine Tree Motor Lodge; constructed in the rustic Minimal Traditional architectural style between 1953 and 1958	Price, 2016
P-37-036401	Historic Building	Restaurant; the Wagon Wheel Restaurant; constructed in the rustic Minimal Traditional architectural style; date of construction not given	Price, 2016
P-37-036603	Historic Building	Industrial and ancillary buildings; Quince Street Warehouse Complex. Constructed in the Modern/Contemporary architectural style between 1953 and 1967	Davison and Robbins-Wade, 2017

* Plotted within APE

In order to supplement information obtained from the SCIC record search, the NRHP website was consulted. Five addresses listed on the National Register are within one mile of the APE, and include the Hotel Charlotta (#92001752), the Thomas/Turrentine House (#92001684), the Bandy House (#92001754), the A.H. Beach House (#93001462), and the Howell/Leighton House (#92001612). All five of these addresses are located over a half-mile from the project.

3.1.3 Other Archival Research

Various additional archival sources were also consulted to identify historic structures and land use in the area. These include historic aerials from 1947, 1953, 1964, and 1967 (NETR Online 2019) and several historic USGS topographic maps, including the 1893 and 1901 Escondido (1:125,000), and the 1948 and 1968 Escondido (1:24,000) topographic maps.

On the 1893 topographic map, the town site of Escondido is observed southeast of the project area as a grid of roads and several structures. A larger grid of roadways is also shown within the Escondido Creek valley to northeast, and a more organic network of roads are shown to the north, west, and southwest. The Escondido Branch of the California Southern Railroad is observed to the south of the project parcel. Similar conditions are shown on the 1901 topographic map, but with additional roads and structures within the project vicinity. In addition, a railroad wye is shown extending north into the project parcel from the railroad. Reidy Creek, a tributary of the Escondido Creek, is shown on the 1893 and 1901 maps traveling through the central portion of the project parcel.

The 1947 aerial shows the product water pipeline APE along West Washington Avenue as primarily rural, with the roads being laid out in larger grids than to the south and residences being situated along the north and south sides of the avenue. The 1947 aerial photograph clearly shows the railroad wye and

Reidy Creek within the project parcel; however, the tributary appears to have been channelized within the APE by this time. Both the railroad wye and tributary are shown on the 1948 topographic map as well.

The 1953 aerial shows similar conditions as the 1946 aerial; however, by 1964, a good deal of residential and agricultural development has occurred within the project vicinity. While the location of the Reidy Creek drainage is still visible within the project area on the 1967 aerial, a newly constructed channel is observed traveling on the east side of the parcel, bypassing the original creek route within the project parcel.

The increase in residential, commercial, and infrastructure development continues into the and 1980s, with the majority of Escondido to the southeast of the project site being shown as generalized urban area on the topographic maps. The project parcel, however, remains undeveloped on the 1980 and 1989 aerials, with both the railroad wye and Reidy Creek within the project parcel continuing to be faintly visible. But on the 1990 aerial, the railroad wye and creek drainage are no longer visible within the project site, and by the 2000s the parcel is shown as being used for staging.

3.2 NATIVE AMERICAN CONTACT PROGRAM

HELIX contacted the Native American Heritage Commission (NAHC) on February 21, 2019 for a Sacred Lands File search and list of Native American contacts for the project area. The response, received on February 27, 2019, noted that a search of the Sacred Lands File was completed for the APE with positive results, and instructed that the San Luis Rey Band of Mission Indians be contacted for more information. On March 5, 2019, HELIX Senior Archaeologist Stacie Wilson spoke to Cami Mojado of the San Luis Rey Band of Mission Indians about tribal cultural concerns and the positive Sacred Lands File search results for the project. Ms. Mojado expressed that sensitive discoveries have occurred immediately north of the Escondido Creek channel, and that the project area is considered sensitive. Ms. Mojado stated that cultural resource monitoring is recommended due to the area being developed during a period before CEQA was initiated; and that monitoring should be full time with potential for spot checks after the initial excavations. She would also like to confirm that the mitigation measures for the project comply with the City's most recent standardized measures.

Letters regarding the project were sent via certified mail on March 8, 2019 to all contacts listed by the NAHC. One response has been received. In a letter dated March 22, 2019, the Viejas Band of Kumeyaay Indians (Viejas) indicated that the general project area has cultural significance or ties to Viejas and request that a Kumeyaay Cultural Monitor be on site for ground disturbing activities to inform them of any new developments such as inadvertent discovery of cultural artifacts, cremation sites, or human remains.

In accordance with the requirements of AB 52, on July 31, 2019 the City sent notification to four Native American Tribes traditionally and culturally affiliated with the project area; no response was received from the San Luis Rey Band of Mission Indians, Soboba Band of Luiseño Indians, or Mesa Grande Band of Mission Indians. In a response dated August 12, 2019, the Rincon Band of Luiseño Indians (Rincon) identified the location as being within the Territory of the Luiseño people, and also within Rincon's specific area of Historic interest. Furthermore, Rincon identified one Luiseño place name within close proximity to the project site. The tribe requested the completion of an archaeological record search and assessment with results being provided to them. Rincon also requested formal consultation, which was conducted with City staff on October 22, 2019. Rincon indicated that although there were no tribal

cultural resources identified on the project site, there is the potential for the proposed project to impact unknown tribal cultural resources and requested that a Luiseño Cultural Monitor be on the site for ground disturbing activities and that the standard Cultural Mitigation measures that were developed with the Tribes input be incorporated.

Native American correspondence is included as Appendix C (Confidential Appendices, bound separately).

4.0 METHODS

4.1 SURVEY METHODOLOGY

A pedestrian survey of the project parcel was conducted on March 5, 2019 by HELIX field director Julie Roy. Kumeyaay Native American monitor Gabe Kitchen from Red Tail Environmental and Luiseño Native American monitor Ali'i Suiaunoa from Saving Sacred Sites participated in the pedestrian survey.

The project parcel was walked by the survey crew in 5-meter increments when feasible, but due to the lack of visibility there was a need to do reconnaissance survey in many areas. Reconnaissance survey was achieved by meandering in and out of open areas throughout the project site.

The west side of the property was highly disturbed with a small area of water located south of the parking area at the back entrance (Plate 1). This area was surrounded on three sides with a man-made berm. The parcel is used for storage; along the southern and middle portions of the project area, equipment parts and metal bins have been laid out on the ground in rows (Plate 2). Towards the east portion of the parcel are several large spoil piles. Furthermore, there are areas separated by concrete k-rails for discards, trash, vegetation, recyclables and so on along the east end of the project boundary. Within the northeast portion of the project, buildings, paved driveways and gravel, as well as a thick growth of grass cover most of the ground. Visibility, as a whole was no more than 50 percent, and as low as zero percent within some areas of the parcel.

Plate 1. Overview of man-made berm at west side of the project parcel, view to the northwest.

Plate 2. Overview of central of project parcel, spoil piles in background, view to the northeast.

A pedestrian survey was not undertaken for the 1-mile long product water pipeline situated along West Washington Avenue. The APE along the pipeline route is defined by the road right-of-way; as such, is covered in asphalt and/or concrete with no visible ground to survey.

5.0 SURVEY RESULTS

The project parcel is currently used as a City staging and equipment yard and is highly disturbed; however, the depths of previous disturbance related to the property's development are not known. Aerial images from the 1990s suggest that the parcel may have only undergone light grading prior to its use for staging/equipment storage.

No cultural resources were observed within the project area during the cultural resources survey. A railroad wye was present within the parcel as early as 1901 and can faintly be seen on aerials throughout the 1980s. However, by the 1990s no visible sign of the railroad wye can be seen on aerials and no evidence of it was observed during the pedestrian survey. As such, it has been determined that the railroad wye has been removed from the parcel and is no longer existent within the project APE.

6.0 SUMMARY AND MANAGEMENT RECOMMENDATIONS

A study was undertaken to identify cultural resources that are present in the MFRO Facility Project APE and determine the effects of the undertaking on historic properties. The cultural resources survey did not identify any historic-period or prehistoric resources within the project area; therefore, no impacts to cultural resources are anticipated.

As such, based on the results of the current study, no historic properties will be affected by the proposed project. However, as noted by the NAHC, the Sacred Land File search for the project area was returned with positive results. The San Luis Rey Band of Mission Indians have indicated that sensitive

discoveries have occurred immediately north of the Escondido Creek channel, and that the project area is considered sensitive to the tribe. The Rincon Band of Luiseño Indians also indicated that although there were no tribal cultural resources identified on the project site, there is the potential for the proposed project to impact unknown tribal cultural resource. Additionally, the project location is situated within an alluvial environment. As such, there is a potential for subsurface cultural resources to be present within the APE.

Due to these concerns, it is recommended that an archaeological and Native American monitoring program be implemented for grading or other ground disturbing activities (i.e., trenching for utilities) for the proposed project. The recommended monitoring program is described below.

Should the project limits change to incorporate new areas of proposed disturbance, archaeological survey of these areas will be required.

6.1 MITIGATION MONITORING RECOMMENDATIONS

CUL-1 It is recommended the City of Escondido Planning Division (City) should enter into a Tribal Cultural Resource Treatment and Monitoring Agreement (also known as a preexcavation agreement) with a tribe that is traditionally and culturally affiliated with the Project Location (TCA Tribe) prior to issuance of a grading permit. The purposes of the agreement are (1) to provide the applicant with clear expectations regarding tribal cultural resources; and (2) to formalize protocols and procedures between the City and the TCA Tribe for the protection and treatment of, including but not limited to, Native American human remains; funerary objects; cultural and religious landscapes; ceremonial items; traditional gathering areas; and cultural items located and/or discovered through a monitoring program in conjunction with the construction of the proposed project, including additional archaeological surveys and/or studies, excavations, geotechnical investigations, grading, and all other ground disturbing activities.

CUL-2 Prior to issuance of a grading permit, the City shall retain a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (U.S. Department of the Interior, 2008), and Native American monitors associated with a TCA Tribe to implement the monitoring program. Because the project is located within shared territory of the Luiseño and Kumeyaay people, Native American monitors representing the interest and values of both the Luiseño and Kumeyaay people shall be retained for the project. The archaeologist shall be responsible for coordinating with the Native American monitor. This verification shall be presented to the City in a letter from the project archaeologist that confirms that Native American monitors representing both Luiseño and Kumeyaay TCA Tribes have been retained. The City, prior to any pre-construction meeting, shall approve all persons involved in the monitoring program.

CUL-3 The qualified archaeologist and a Native American monitor shall attend the pre-grading meeting with the grading contractors to explain and coordinate the requirements of the monitoring program.

CUL-4 During the initial grubbing, site grading, excavation or disturbance of the ground surface, the qualified archaeologist and the Native American monitor shall be on site full-time. The frequency of inspections shall depend on the rate of excavation, the materials excavated, and

any discoveries of tribal cultural resources as defined in California Public Resources Code Section 21074. Archaeological and Native American monitoring will be discontinued when the depth of grading and soil conditions no longer retain the potential to contain cultural deposits. The qualified archaeologist, in consultation with the Native American monitor, shall be responsible for determining the duration and frequency of monitoring.

CUL-5 In the event that previously unidentified cultural resources that qualify as historical, unique archaeological, and/or tribal cultural resources are discovered, the qualified archaeologist and the Native American monitor shall have the authority to temporarily divert or temporarily halt ground disturbance operation in the area of discovery to allow for the evaluation of potentially significant cultural resources. Isolates and clearly non-significant deposits shall be minimally documented in the field and collected so the monitored grading can proceed.

CUL-6 If a potentially significant historical, unique archaeological, and/or tribal cultural resource is discovered, the qualified archaeologist shall notify the City of said discovery. The qualified archaeologist, in consultation with the City, the TCA Tribe and the Native American monitor, shall determine the significance of the discovered resource. Recommendations for the resource's treatment and disposition shall be made by the qualified archaeologist in consultation with the TCA Tribe and the Native American monitor and be submitted to the City for review and approval.

CUL-7 The avoidance and/or preservation of significant cultural resources that qualify as historical, unique archaeological, and/or tribal cultural resources must first be considered and evaluated as required by CEQA. Where any significant resources have been discovered and avoidance and/or preservation measures are deemed to be infeasible by the City, then a research design and data recovery program to mitigate impacts shall be prepared by the qualified archaeologist (using professional archaeological methods), in consultation with the TCA Tribe and the Native American monitor, and shall be subject to approval by the City. The archaeological monitor, in consultation with the Native American monitor, shall determine the amount of material to be recovered for an adequate artifact sample for analysis. Before construction activities are allowed to resume in the affected area, the research design and data recovery program activities must be concluded to the satisfaction of the City.

CUL-8 As specified by California Health and Safety Code Section 7050.5, if human remains are found on the project site during construction or during archaeological work, the person responsible for the excavation, or his or her authorized representative, shall immediately notify the San Diego County Coroner's office. Determination of whether the remains are human shall be conducted on-site and in situ where they were discovered by a forensic anthropologist, unless the forensic anthropologist and the Native American monitor agree to remove the remains to an off-site location for examination. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the Coroner has made the necessary findings as to origin and disposition. A temporary construction exclusion zone shall be established surrounding the area of the discovery so that the area would be protected, and consultation and treatment could occur as prescribed by law. In the event that the remains are determined to be of Native American origin, the Most Likely Descendant, as identified by the Native American Heritage Commission, shall be contacted in order to determine proper treatment and disposition of the remains in accordance with California Public Resources Code section 5097.98. The Native American remains shall be kept

in-situ, or in a secure location in close proximity to where they were found, and the analysis of the remains shall only occur on-site in the presence of a Native American monitor.

CUL-9 If the qualified archaeologist elects to collect any archaeological materials that qualify as tribal cultural resources, the Native American monitor must be present during any testing or cataloging of those resources. Moreover, if the qualified archaeologist does not collect the archaeological materials that qualify as tribal cultural resources that are unearthed during the ground disturbing activities, the Native American monitor, may at their discretion, collect said resources and provide them to the TCA Tribe for respectful and dignified treatment in accordance with the Tribe's cultural and spiritual traditions. The project archaeologist shall document evidence that all cultural materials have been curated and/or repatriated as follows:

1) It is the preference of the City that all tribal cultural resources be repatriated to the TCA Tribe as such preference would be the most culturally sensitive, appropriate, and dignified. Therefore, any tribal cultural resources collected by the qualified archaeologist shall be provided to the TCA Tribe. Evidence that all cultural materials collected have been repatriated shall be in the form of a letter from the TCA Tribe to whom the tribal cultural resources have been repatriated identifying that the archaeological materials have been received.

OR

2) Any tribal cultural resources collected by the qualified archaeologist shall be curated with its associated records at a San Diego curation facility or a culturally-affiliated Tribal curation facility that meets federal standards per 36 CFR Part 79, and, therefore, would be professionally curated and made available to other archaeologists/ researchers for further study. The collection and associated records, including title, shall be transferred to the San Diego curation facility or culturally affiliated Tribal curation facility and shall be accompanied by payment of the fees necessary for permanent curation. Evidence that all cultural materials collected have been curated shall be in the form of a letter form the curation facility stating the prehistoric archaeological materials have been received and that all fees have been paid.

CUL-10 Prior to the release of the grading bond, a monitoring report and/or evaluation report, if appropriate, which describes the results, analysis and conclusion of the archaeological monitoring program and any data recovery program on the project site shall be submitted by the qualified archaeologist to the City. The Native American monitor shall be responsible for providing any notes or comments to the qualified archaeologist in a timely manner to be submitted with the report. The report will include California Department of Parks and Recreation Primary and Archaeological Site Forms for any newly discovered resources.

Resumes

Stacie Wilson, RPA

Senior Archaeologist

HELIX Environmental Planning

Summary of Qualifications

Ms. Wilson has been professionally involved in cultural resources management for 15 years and has more than 17 years of unique experience in both archaeology and GIS. She has served as principal investigator on numerous cultural resources management projects, and regularly coordinates with local, state, and federal agencies and Native American tribal representatives. She is skilled in project management, archaeological inventories and excavation, and report documentation and has broad experience with utility, municipal, federal, renewable energy, and private development projects. Her years of experience also encompass an understanding of CEQA and NEPA compliance regulations. She is proficient at creating, organizing, and analyzing GIS data; technical skills include ArcGIS 10.4, Spatial Analyst, Geostatistical Analyst, and working with datasets in Microsoft Word and Excel. Ms. Wilson is detail-oriented and has strong organizational and coordination capabilities.

Selected Project Experience

Eastern Municipal Water District As-Needed Environmental Services (2015 - 2019). Serving as Senior Archaeologist on several individual task orders for HELIX's as-needed environmental services agreement with EMWD, including Well 59 Wellhead Treatment Facilities (2018), Cactus II Feeder Transmission Pipeline (2017 – 2018), and Fox Tank Replacement (2017). Responsible for coordinating cultural resources studies including records searches, Sacred Lands File searches, Native American outreach, reviews of historic aerial photographs and maps, and pedestrian surveys. Authored cultural resources technical reports.

Crescent Drive Sewer Improvements Project (2018). Cultural Task Lead for a sewer improvements project in the City of Vista. The project proposes to conduct improvements to the sewer main and connecting sewer laterals within Crescent Drive. Duties included conducting a record search and a Sacred Lands File search; reviewing existing cultural resources information for the project site and immediate vicinity; coordinating a field visit; and preparing a constraints report. Work performed for KEH and Associates, Inc. with the City of Vista as the lead agency.

Padre Dam Municipal Water District East County Advanced Water Purification Program (2018). Senior Archaeologist for cultural resources inventory and assessment of approximately 10 miles of pipeline. The East County Advanced Water Purification project proposes to increase the region's supply of potable water. Duties included preparation of a cultural resources study, assisting with community outreach with regard to the historic resources, and working with the agencies and interested parties to develop appropriate measures to avoid or minimize impacts. Work performed for Kennedy/Jenks Consultants, Inc., with Padre Dam Municipal Water District as the lead agency and Helix Water District, the County of San Diego, and the City of El Cajon as participating agencies.

Education

Master of Science, Applied Geographical Information Science, Northern Arizona University, 2008

Bachelor of Arts, Anthropology, University of California, San Diego, 2001

Bachelor of Science, Biological Psychology, University of California, San Diego, 2001

Registrations/ Certifications

The Register of Professional Archaeologists #16436, 2008

Riverside County Approved Cultural Resources Consultant, 2017

Professional Affiliations

Society for California Archaeology

City of San Diego Water Group Job 939 (2018). Principal Investigator for the Water Group Job 939, located in the Sorrento Valley area of the City of San Diego. Conducted as part of an as-needed contract with the City of San Diego, Public Works Department, Project Implementation Division, the project proposes approximately 6,846 linear feet of water main replacement and installation. Duties included conducting background research, reviewing previous cultural resource surveys, and coordination of Native American and archaeological monitors.

Alvarado 2nd Pipeline Extension (2018 - 2019). Principal Investigator overseeing completion of cultural resource management services for the geotechnical investigations related to this approximately 8.5-mile pipeline project, which will include the extension of the existing Alvarado 2nd Pipeline along Friars Road between Interstate 805 and West Mission Bay Drive. Responsibilities included overseeing a record search and submitting a request for a Sacred Lands File search; reviewing environmental, geological, and existing cultural resources information for the project alignment; coordinating a field visit; and preparing a report that provided monitoring recommendations. Oversaw subsequent archaeological and Native American monitoring program. Work performed for Kennedy/Jenks Consultants, Inc., with the City of San Diego as the lead agency.

City of San Diego Sewer Group 806 (2017 - 2018). Principal Investigator for the Sewer Group Job 806, located in the College Area and Mid City Kensington-Talmadge community planning areas in the City of San Diego. Conducted as part of an as-needed contract with the City of San Diego, Public Works Department, Project Implementation Division, the project proposes both the replacement and rehabilitation of existing sewer mains, including replacing-in-place approximately 2,158 linear feet of existing vitrified clay pipe sewer mains. Duties included conducting background research, reviewing previous cultural resource surveys, conducting a field survey with a Native American monitor, and the preparation of a cultural resources technical report.

Quince Street Senior Housing Project (2017). Principal Investigator for the demolition of an existing warehouse complex within a developed property in order to construct affordable housing for seniors. Managed reconnaissance survey of the project area, which included photography of the built environment within the project site and documentation/evaluation of structures over 50 years of age. Assisted with cultural resources technical report preparation. Work performed for San Diego InterFaith Housing Foundation, with the City of Escondido as the lead agency.

City of San Diego Long-term Mitigation Strategy Development (2016). Principal Investigator for a cultural resources study of the Kearny Mesa East Mitigation Site, a 7.57-acre City of San Diego owned parcel located in Murphy Canyon. Conducted as part of an as-needed contract with the City of San Diego, Transportation & Storm Water Department, the project evaluated the potential mitigation opportunities for the parcel. Duties included conducting background research, a field survey and recording of cultural resources, Native American outreach and coordination, and report preparation. Work performed for the City of San Diego.

1 INTRODUCTION

Ninyo & Moore was retained by HELIX Environmental Planning on behalf of the City of Escondido (herein referred to as the client) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 901 West Washington Avenue in Escondido, California (hereinafter referred to as the site). The following sections discuss the purpose, the involved parties, the scope of services, and the limitations and exceptions associated with the Phase I ESA.

1.1 Purpose

In accordance with the ASTM International (ASTM) Standard Practice for ESAs on Commercial Real Estate E1527-13, the objective of the Phase I ESA is to identify recognized environmental conditions (RECs). The term recognized environmental conditions means "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

Identification of RECs fall into the following three categories: existing RECs (as defined above); Historical RECs (HRECs); or Controlled RECs (CRECs). HRECs and CRECs are defined as follows:

- HREC – An HREC is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations [AULs], institutional controls, or engineering controls)." An HREC is an environmental condition, which in the past, would have been considered a recognized environmental condition, but currently may or may not be considered a recognized environmental condition. An example of an HREC may be a former gas station where a release of gasoline had occurred, but the site was cleaned up to an unrestricted land use standard.

- CREC – A CREC is defined as a "recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by a regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, AULs, institutional controls, or engineering controls)." An example of a CREC could be a former gas station where a release of gasoline has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria.

1.2 Scope of Services

Ninyo & Moore's scope of services for this Phase I ESA included the activities listed below.

- Reviewed physical setting and background information.
- Performed a site reconnaissance.
- Reviewed federal, state, tribal, and local regulatory agency databases for the site and for properties located within a specified radius of the site.
- Reviewed reasonably ascertainable local regulatory agency files for the site, as applicable.
- Reviewed historical information for the site, such as historical aerial photographs, historical topographic maps, reverse street directories, Sanborn fire insurance maps, and building department records, as available.
- Reviewed user-provided information, as available.
- Interviewed the property owner representative regarding the environmental status of the site.
- Performed a preliminary vapor encroachment screen to evaluate the potential for vapor encroachment condition (VEC) and Tier 2 VEC assessment.
- Prepared this Phase I ESA report, summarizing findings and providing opinions and conclusions regarding RECs at the site.

1.3 Significant Assumptions

Ninyo & Moore assumes the information sources from the third-party environmental database vendor, regulatory agencies, and interviewees utilized for this report provided adequate and accurate information. No other significant assumptions were made during the preparation of this report.

1.4 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard of care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of humans at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control. Ninyo & Moore cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material, or any other hazardous materials, do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5 Special Terms and Conditions

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, unless otherwise indicated in this report, this Phase I ESA does not include analysis of the following, which is not intended to be all-inclusive: asbestos-containing materials, methane gas, radon, lead-based paint, lead-containing surfaces, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, or mold.

1.6 Reliance

This report may be relied upon by, and is intended exclusively for, the client and its assigns. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than the above-referenced client is undertaken at said parties' sole risk.

1.7 Involved Parties

Ms. Marci Richards, Senior Geologist, conducted interviews and the site reconnaissance on March 5, 2019 and performed regulatory and historical research. Mr. Stephan Beck, Manager of Environmental Sciences, performed project oversight and quality review.

2 SITE DESCRIPTION

The following table provides a general description of the subject site. Photographs taken during the site reconnaissance are provided in Appendix A.

Table 1 – General Site Setting

General Site Setting	Description
Location	The site is located approximately 55 feet southwest of the West Washington Avenue and Rock Springs Road intersection.
Assessor Parcel No. (APN)	232-009-72-00
Property Owner	City of Escondido
Size (approximate)	10.2 acre
Structures / Site Use / Occupants	The site is developed with one single wide trailer used by a non-profit recycling group; one quadruple wide trailer used for training by various City departments (e.g., fire department); and an asphalt paved parking lot. The remainder of the site is used by the City of Escondido, Department of Public Works (DPW) for storage (e.g., tools, equipment, structures, soil) and heavy equipment training (e.g., backhoe operators), except for a location on the west side that is leased to EDCO, a waste disposal corporation, for the storage of empty roll-off bins.
Roads	Roads are not present at the site. The site is accessible via a driveway along West Washington Avenue and a shared access driveway with two gated entrances on the west side.
Electricity and Natural Gas Provider	San Diego Gas and Electric (SDG&E) provides electricity and natural gas to the site.
Sewer Disposal Provider	City of Escondido
Potable Water Provider	City of Escondido
Site Vicinity Description	Commercial/Industrial Use

3 USER-PROVIDED INFORMATION

Mr. Nelson Nuezca, City of Escondido, completed the User Questionnaire on March 21, 2019. The following table summarizes information provided by Mr. Nuezca. A copy of the questionnaire is provided in Appendix B.

Table 2 – Summary of User-Provided Information

User's Responsibilities	User's Responses
Title Records	The property is vested in City of Escondido, a municipal corporation. Easements were recorded for public utilities, ingress and egress, pipelines and ditches (1895), and for railroad track and switch purposes (1896). The title report is provided in Appendix B.
Environmental Liens or Activity and Use Limitations (AULs)	None.
Specialized Knowledge	None.
Commonly Known or Reasonably Ascertainable Information	None.
Degree of Obviousness of the Presence or Likely Presence of Contamination	None.
Previously Prepared Documents (e.g., environmental permits, material safety data sheets, Phase I or II ESA)	Yes, County of San Diego Closure documents, Site Assessment Report dated, March 15, 2013, and other related [environmental] documents. Document information is discussed in Section 4.5.
Reason for Performing Phase I ESA	To design and construct Membrane Filter Reverse Osmosis (MFRO) on a portion of the parcel

4 RECORDS REVIEW

The following sections summarize records reviewed for the site.

4.1 Standard Environmental Record Source - Environmental Databases

A computerized, environmental information database search was performed by Environmental Data Resources, Inc. (EDR) on February 25, 2019. The search included federal, state, tribal, and local databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted properties of potential environmental concern, is presented in the EDR report (Appendix C). The review was conducted to evaluate whether the site or properties within the site vicinity have been documented as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

4.1.1 Geocoded (Mapped) Listings

The site was listed on several regulatory agency databases environmental database search (CPS-SLIC, FINDS, and HMMD). Two closed VAP cases, H20272-003 and DEH2014-LSAM-000231, are listed for the site address. The first case was opened following discovery of shallow soil impacted with total petroleum hydrocarbons (TPH) in an unlined drainage ditch. The origin of the contamination found at the site was noted to be from the adjacent property to the east, 849 West Washington Avenue. The case was closed following the excavation of approximately 20 cubic yards (later listed as 70 cubic yards). The second case was opened following due diligence soil and groundwater investigation in the former drainage ditch and current storm drain culverts. TPH in the diesel and motor oil range were detected in soil samples and methyl tertiary-butyl ether (MTBE) and tetrachloroethylene (PCE) were detected in the groundwater samples. TPH-impacted soil was concluded to be limited, MTBE-impacted groundwater was defined, PCE-impacted groundwater was noted as regional in nature, and metal concentrations in soil and groundwater were noted to be background levels. Listings for the site were further researched and are discussed in Sections 4.4 and 4.5. Offsite properties/facilities listed in the database report were evaluated as to their potential to impact soil and/or groundwater at the site.

Offsite properties within 1 mile of the site appeared on various regulatory agency databases. The following table lists ASTM standard environmental databases that were searched and the number of listings (excluding unmapped properties).

Table 3 – ASTM Standard Environmental Databases		
Database Name	**Search Radius (mile)**	**Number of Listings**
FEDERAL DATABASES		
NPL (National Priority List)	1	0
Proposed NPL	1	0
NPL LIENS (Federal Superfund Liens)	Site	0
Delisted NPL	1	0

US ENGINEERING CONTROL (EC)	0.5	0
US INSTITUTIONAL CONTROL (IC)	0.5	0
ERNS (Emergency Notification System)	Site	0
STATE/TRIBAL DATABASES		
RESPONSE (State Response Sites, State- and Tribal- equivalent NPL)	1	0
ENVIROSTOR (The DTSC's Site Mitigation and Brownfields Reuse Program; CERCLIS-equivalent)	1	12
SWF/LF (Solid Waste Information System)	0.5	4
LUST (Geotracker's Leaking Underground Fuel Tank Report)	0.5	52
Brownfields	0.5	0
San Diego Co. SAM	0.5	37
SLIC (Spills, Leaks, Investigation and Cleanup database by the California Regional Water Quality Control Board)	0.5	20
UST (registered underground storage tanks [USTs])	0.25	2
AST (registered aboveground storage tanks [ASTs])	0.25	11
FEMA UST (Underground Storage Tank Listing)	0.25	0
VCP (Voluntary Cleanup Program Properties)	0.5	0

To supplement the information in the EDR report, County of San Diego Department of Environmental Health (DEH) files were requested and reviewed, and the State Water Resources Control Board (SWRCB) GeoTracker website was reviewed. Information from the EDR database report and supplemental sources are included in the table below. The following properties/facilities were interpreted to represent a potential environmental concern to the site, based on their proximity to the site, the nature of the database on which they are listed, and/or the assumed direction of groundwater flow in the site vicinity (southeast to southwest), and were further evaluated.

Table 4 – Offsite Facilities of Potential Concern			
Facility Name / Address	**Distance/ Direction from Site**	**Database**	**Summary**
Palomar Transit Mix 849 West Washington Avenue	adjacent east	LUST NPDES CIWQS SAM HMMD AST UST TRIS EMI	The case was opened in 1997 when petroleum contamination soil was discovered after the removal of a diesel UST; location appears to be approximately 110 feet east of the western property line and 200 feet south of West Washington Avenue. Approximately 40 cubic yards of petroleum-contaminated soil were removed beneath the UST and dispenser and later placed back into the excavation and covered by at least 2 feet of clean soil and paved. Soil and groundwater assessment in the area of the UST was performed. PCE and trichloroethylene (TCE) concentrations in groundwater were above California drinking water maximum contaminant levels (MCLs). The Regional Water Quality Control Board (RWQCB) concluded that the chlorinated hydrocarbon contamination at the property was not due to the release of chemicals from the UST and the case was closed in 1998. Based on the case closed status and cross- to down-gradient hydrologic position relative to the site, planned removal of the temporary buildings, and continued use of the eastern portion of the property for the DPW, this listing is not a concern to the project at this time.
Pacific Bell 950 West Washington Avenue	100 feet north	LUST HIST CORTESE	The case was opened in 1993 when petroleum contaminated soil was discovered after the removal of a gasoline UST. Gasoline impacted soil was excavated and disposed offsite at Sycamore Landfill. Based on the results of subsequent soil and groundwater investigations, soil contamination was limited to the immediate vicinity of the former UST and removed by over excavating and the groundwater was not impacted by the hydrocarbon release from the UST. Low total lead concentrations (2 and 7 micrograms per liter [ug/l]) in groundwater were reported and attributed to sample preparation methods. Low TCE and PCE concentrations (0.49 to 5.8 ug/l) in groundwater were similar to other concentrations at other sites in the Escondido area. The case was closed by the DEH and RWQCB in 1995. Based on the distance from the site and case closed status, this listing is not a concern to the site at this time.
Sprinter Operations Facility 1021 West Washington Avenue	Adjacent southwest	RCRA-SQG FINDS	Various items to address were noted on the compliance inspection report in 2010 (e.g., plans/records not up to date, records not available for review, incorrect volumes [vessel size or quantity stored]) in addition to a status change to LQG. A request for the capacity of an underground 3-inch pipe from the AST was requested in the 2015 compliance inspection report and the facility was identified as a SQG. The reported noted the facility stores three 10,000-gallon diesel ASTs, two 5,000-gallon tanks of lube oil, a 2,000-gallon diesel generator, four 60-gallon used lube oil tanks, and a 250-gallon recovered oil tank. Based on the absence of reported leaks and files on GeoTracker and EnviroStor, this listing is not a concern to the site at this time.

Table 4 – Offsite Facilities of Potential Concern

Facility Name / Address	Distance/ Direction from Site	Database	Summary
Hiett Mfg/Escondido Disposal 1035 West Washington Avenue	Adjacent west	SWF/LF CHMIRS SWEEPS UST HIST UST HIST CORTESE LUST SAM HMMD	The case was opened in 1989 when gasoline and diesel contaminated soil was discovered after the removal of USTs in the approximate west-central portion of the property. Approximately 200 cubic yards of soil were remediated and buried onsite in two areas; 75 cubic yards were placed above clean soil and covered with clean soil in the former UST excavation and the remainder was used as sub base material, with clean soil cover, for an existing parking lot. The benzene concentration in groundwater, 3 ug/l, was expected to naturally degrade to below MCLs. The case was closed by the DEH and RWQCB in 1993. Based on the case closed status and cross-gradient hydrologic position relative to the site, this listing is not a concern to the site at this time.
City of Escondido, DPW 475 Spruce Street	300 feet southeast	LUST AST HMMD SAM HIST UST	The case was opened in 1999 when gasoline and diesel contaminated soil was discovered after the removal of five USTs. Soil and groundwater assessments were performed between 1999 and 2011. In 2013, a work plan to install additional groundwater monitoring wells was submitted to the DEH; however, the case was transferred to the RWQCB shortly thereafter. The work plan was denied, as the RWQCB determined the case meets the criteria of the low threat closure policy. The 2014 groundwater concentrations were as follows: benzene ranged from <1.8 to 330 µg/l; MTBE ranged from 5.2 to 6,200 µg/l; PCE and TCE ranged from below laboratory detection limits to 12 µg/l. A no further action letter was issued by the RWQCB on February 26, 2019. Based on the case closed status and downgradient hydrologic position relative to the site, this listing is not a concern to the site at this time.

Note:
- A complete description of each database is provided in the EDR Report (Appendix C).

It is our opinion that there is a low likelihood that the remaining offsite property listings appearing in the database report represent a REC to the site at the current time. This opinion is based on one or more of the following factors:

- The nature of the database(s) on which the property appears, and/or because the property did not appear on a database that reports unauthorized releases of hazardous substances;
- Reported regulatory agency status (i.e., case closed);
- Reported nature of the case (i.e., soil contamination only);
- Reported distance of the property from the site; and/or
- Location of the property in relation to the site with respect to topography or expected groundwater flow direction (southwest to southeast).

4.1.2 Non-Geocoded (Unmapped) Listings

This portion of the regulatory database report includes properties for which regulatory agencies did not report sufficient address information to be plotted by EDR. Based on our review of the unmapped properties, it is our opinion that the unmapped properties are not a concern to the site based on the interpreted distance to the site.

4.2 Additional Environmental Record Sources

According to the ASTM Standard, "if the property or any of the adjoining properties is identified on one or more of the standard environmental record sources, pertinent regulatory files and/or records associated with the listing should be reviewed." Adjoining properties are discussed in Table 4. The review of regulatory agency records for the site is discussed in the following sections. Regulatory records for the site are provided in Appendix D.

4.2.1 County of San Diego Department of Environmental Health

The records provided by a representative of the DEH on February 28, 2019, included the reports provided by the City of Escondido, which discuss two closed VAP cases and are presented in Section 4.5.

4.2.2 Regional Water Quality Control Board, San Diego Region

According to a representative of the RWQCB on February 25, 2019, no records were found for the site address.

4.2.3 County of San Diego Air Pollution Control District

According to a representative of the San Diego County Air Pollution Control District (APCD) on March 18, 2019, no records were found for the site address.

4.2.4 City of Escondido Utilities Division

A records search for the site address was performed by the City of Escondido, Utilities Division February 27, 2019. No industrial wastewater related records were found.

4.2.5 Online Regulatory Databases

Online regulatory databases were reviewed by Ninyo & Moore to supplement the environmental database search conducted by EDR. The following is a summary of pertinent information.

Table 5 – Online Regulatory Databases

Online Database/Website	Findings
DTSC Envirostor	Neither the site nor properties within 1,000 feet are listed.
SWRCB GeoTracker	The site is listed with closed unauthorized release (UAR) cases. Two properties to the north with closed UAR cases are across West Washington Avenue. The adjoining property to the west of the site, across the shared access driveway, has a closed UAR case. The adjoining property to the east of the site has closed UAR cases. The property across the concrete lined culvert to the southeast has a closed UAR and pending closure UAR. The property across the railroad tracks to the southwest has closed UARs. The adjoining properties with UAR cases were discussed in Section 4.1.1.
California Department of Resources Recycling and Recovery (CalRecycle) Solid Waste Information System (SWIS)	The property to the adjacent west, Escondido Disposal, Inc.,1035 West Washington Avenue is listed on the SWIS databased as a limited volume transfer operation. Various areas of concern/violations between 2008 and 2019 (e.g., handling of hazardous liquid & special waste, solid waste removal, scavenging) were listed with closed dates for the concern/violation.
United States Pipeline and Hazardous Materials Safety Administration, National Pipeline Mapping System Map Viewer	Pipelines are not depicted on or adjacent to the site.

4.3 Physical Setting

The following table summarizes topographic, geologic, and hydrogeologic conditions in the vicinity of the site, based upon the referenced documents review and/or our visual reconnaissance of the site.

Table 6 – Physical Setting

Physical Settings	Reference	Summary
Topography	A, D	The site is situated at an elevation of approximately 700 feet above mean sea level (MSL). The topography at the site is relatively flat and the vicinity slopes to the south towards the Reidy Creek concrete-lined channel adjacent to the southeast corner of the site.
Site Geology	B, D	The site is underlain by silty and clayey fine to medium sands overlying decomposed granitic rock.
Surface Water	A	Surface waters are not present at the site. The nearest surface water is the Reidy Creek concrete-lined channel, located approximately 300 feet east and immediately south of the site. The creek runs north-northeast to south-southwest and flows into Escondido Creek concrete-lined channel, southwest of the site.

Table 6 – Physical Setting		
Physical Settings	**Reference**	**Summary**
Groundwater	C, D	The site is located in the Escondido Hydrologic Subarea (HSA) within the Escondido Creek Hydrologic Area and Carlsbad Hydrologic Unit. The Escondido HSA has beneficial uses for municipal, agricultural supplies and industrial service supplies. Groundwater levels at the site were measured during site assessment activities in 2012. Groundwater was encountered between 13 and 22 feet below ground surface (bgs). The groundwater flow direction is estimated to be from the southeast to the southwest towards the Reidy Creek and Escondido channels. Groundwater levels, gradient, and flow direction can fluctuate due to seasonal variations, groundwater withdrawal or injection, changes in land use, and other factors.

4.4 Site Historical Use Information

Ninyo & Moore conducted a historical-record search for the site. This included a review of city directories, fire insurance maps, aerial photographs, topographic maps, and building department records. The following sections summarize information obtained from the historical sources utilized for this assessment.

4.4.1 City Directories

Available historical reverse street directories from 1903 through 2006 were provided by EDR and reviewed to evaluate facilities of potential concern, which may have been historically located at or near the site. Addresses along West Washington Avenue were reviewed. The site was first listed in the 1921 city directories as Lindenmeyer Afd W Vista gro. From 1933 to 2006, businesses are listed but are likely from a San Diego property with the same address, as business names include "Mission Hills" and "Hillcrest" (known locations in the city of San Diego); furthermore, aerial photographs do not show any structures at the site until the 1990s (Section 4.4.3).

Addresses in the immediate site vicinity were also reviewed to identify facilities of potential concern. West Washington Avenue addresses primarily consisted of industrial and commercial use properties. In the 2000 city directory, Escondido Disposal Waste collection was listed at 1044 West Washington Avenue, which is the current occupant. In the 1980 and 2000 city directories, Conrock Co and Palomar Transit Mix are listed at 849 West Washington Avenue, which are both likely concrete mixing facilities similar to the current site occupant, Cemex, which is a concrete manufacturing company.

4.4.2 Sanborn® Fire Insurance Maps

Sanborn® fire insurance maps were requested from EDR; however, according to EDR's Certified Sanborn Map Report, there is no map coverage in the site vicinity.

4.4.3 Historical Aerial Photographs and Topographic Maps

Historical aerial photographs and topographic maps were provided by EDR for select years from 1893 through 2016. Additionally, aerial photographs were reviewed online using Google Earth. A listing of the sources reviewed and summary of notable observations from the photograph review are provided in the table below. EDR-provided photographs and maps are included in Appendix C.

Table 7 – Historical Aerial Photographs and Topographic Maps Summary

Date - Source	Summary
1893 – A	Site is depicted as undeveloped. Roads are present farther to the north and east of the site; the eastern street is in similar alignment to present-day North Quince Street. Railroad tracks and a creek are depicted to the southwest and south, respectively.
1901 – A	A road north of the site is in similar alignment to present-day West Washington Avenue and a railroad wye is depicted on the site.
1939 – B 1947 – A 1946 – B 1948 – A 1949 – A 1953 – B	A railroad wye and a tributary are present through the central portion of the site, crosscutting northeast to southwest. Roads are present to the north, east, and southwest of the site in a similar alignment to present-day West Washington Avenue, North Spruce Street, and the railroad tracks followed by North Tulip, respectively. The 1948 topographic map depicts sewage disposal approximately ¼-mile southeast of the site. A tributary is present immediately south of the site. Sparse agriculture development and structures are depicted in the site vicinity.
1964 – B	A rectangular structure is depicted on the property to the adjacent west of the site. The property to the adjacent east is graded with structures at various locations.
1967 – B 1968 – A 1970 – B	The site appears similar to the previous photographs. The tributary immediately south of the site appears to be channeled. The site vicinity is more developed with structures that appear commercial and industrial.
1975 – A 1979 – B 1985 – B	The site appears similar to the previous photographs. Significant development is depicted in the site vicinity and agriculture property is no longer visible.
1989 – B	The site appears similar to previous photographs, except for some structures or usage in the northeast corner (not discernible in photograph).
1995 – B 1996 – A	The railroad wye and tributary are no longer visible on the site. Small structures or material / equipment are depicted along the eastern portion of the site. The rectangular structure west of the site appears to be cordoned off from the site, likely by a fence or row of hedges. The property to the southwest, before the railroad tracks, appears graded with trailer-like structures at various locations.
2005 – B	The site appears to be surrounded by fence/hedges, a rectangular asphalt-paved parking area is present in the northwest corner, and three stockpiles are depicted in the center of the site. The property to the adjacent northwest is depicted with asphalt.
2008 – C 2009 –B 2012 – A, B, C 2016 – B	The rectangular asphalt surface is extended across the northern boundary of the site and two structures are present in the northeast corner of the site. Various structures (temporary and/or permanent) and/or material storage (e.g. stacks of pipe) are depicted on the eastern and southwestern portions of the site and various stockpile configurations are present in the central portion of the site. The property to the adjacent southwest has been developed with a structure and appears affiliated with the railroad tracks, as tracks terminate at the northern side of the structure.

B = EDR Aerial Photograph
C = Google Earth

4.4.4 Building and Fire Department Records

Building and Fire Safety Department records were obtained from the City of Escondido on February 27, 2019. Notable building department records are discussed below and provided in Appendix E. A building permit application for a temporary fire station, present-day location of the maintenance garage, was submitted in 2006 with the address of 905 West Washington Avenue. An environmental review for the temporary fire station describes an 840 square-foot (SF) office space, 2,880 SF of living quarters, 5,032 SF of fire apparatus bays, with associated paving and parking, with two of the buildings relocated from the existing [fire] station. A landscape and facilitates plan depicts four buildings, three buildings are at the present-day locations and the fourth building is to the northeast; the plan also depicts a trench drain filter system, storm drain and catch basin on the east of the buildings. Records pertaining to the joint driveway easement between the City of Escondido and North County Transit District (NTCD) were provided. Other records provided for 901 West Washington Avenue were for the adjacent property to the east, 849 West Washington Avenue. Various reports of trash, debris, illegal dumping and migrant camps were provided. A grading plan and environmental review for 903 West Washington Avenue was performed in 1992 for the expansion of the Public Works Corporation Storage Yard on vacant land.

4.5 Previous Reports

A Site Assessment Report, dated March 15, 2013 was provided by the City of Escondido for the site. The report summarizes the 1990/1991 site assessment, which received DEH and RWQCB closure for the UAR; assessments performed in 2010 and 2012 to evaluate potential soil and/or groundwater impacts for the purpose of potential site development projects; evaluation of site conditions; and a request for no further action.

The 1990 UAR was for shallow total recoverable petroleum hydrocarbon (TRPH)-impacted soil in an unlined drainage ditch, which provided drainage from the northeast to the southwest across the site. The drainage ditch was observed receiving runoff from the adjacent Palomar Transit Mix (Cemex) facility. During the 1991 assessment, soil samples were collected at 21 locations in the drainage ditch. Based on the analytical results, approximately 415 feet of the drainage ditch, west from the eastern property boundary, was excavated up to depths of 4.5 feet bgs (approximately 70 cubic yards of soil). The excavated soil was stockpiled and transported to Sycamore Landfill for disposal.

In the vicinity of the former drainage ditch, as the ditch is no longer visible at the surface, soil and groundwater assessment activities were performed in 2010 and 2012, and a geotechnical investigation was performed in 2010 by BBC, Inc. (BBC). TPH as motor oil (mo)-impacted soil concentrations were present in soil samples collected at 5 feet bgs at five locations in the approximate location of the former drainage ditch. Samples were collected 15 feet bgs beneath the two 5-foot samples with the highest TPHmo concentrations of 1,210 and 55 mg/kg, SB-2 and SB-3, respectively; TPHmo concentrations were below the laboratory reporting limits. Concentrations of other constituents analyzed, polychlorinated biphenyls (PCBs), metals, and volatile organic compounds (VOCs), were below laboratory reporting limits, EPA regional screening levels, and/or considered naturally occurring (i.e., metals). BBC concluded that TPHmo-impacted soils were present in the shallow soils, but did not extend to groundwater, as further supported by the absence of TPH in groundwater (BBC, 2013). No further action was recommended at this time based on the continued use of the property as a storage yard and for training. If future activities include disturbance of the shallow-impacted soil, handling of the soils should be performed in accordance with DEH directives for TPH-impacted soil (BBC, 2013).

MTBE and PCE concentrations were present in groundwater at concentrations greater than maximum contaminant levels (MCLs), drinking water standards, at locations in and adjacent to the former drainage ditch. BBC concluded that delineation of the lateral extent of low-level MTBE impacts was achieved and a small area of MTBE impact is present in the northwestern portion of the site, with a total estimated MTBE mass exceeding the primary MCL of 13 µg/l to be 0.04 pounds (BBC, 2013). BBC compared the PCE concentrations in groundwater to other facilities in the area and found the PCE concentrations were similar and concluded the presence of PCE is more of a regional problem rather than an association with the site's current or former operations (BBC, 2013). Seven metal concentrations in groundwater exceeded MCLs and were reported to be consistent with concentrations in groundwater collected at nearby facilities and that highly turbid groundwater can result in negatively bias (bias high) analytical results. BBC concluded that the potential for artificially high total metals results in groundwater exists in the data set. BBC recommended no further action for MTBE-impacted groundwater. The DEH concurred and closed the case in June 2016.

4.6 Adjacent Property History

Since at least 1893, the site vicinity was predominantly agricultural and in the 1940s, there was sparse industrial development in the area. In the 1960s there was more commercial and industrial development and by the mid-1970s agriculture property was not present in the site vicinity. From

the 1980s, the present-day adjacent commercial/industrial buildings were constructed, except for the building on the adjacent property to the west, constructed in the 1960s.

5 SITE RECONNAISSANCE

The objective of the site reconnaissance was to obtain information indicating the potential for RECs in connection with the site. Ms. Marci Richards conducted the reconnaissance on March 5, 2019. A site plan is provided as Figure 2 and photographic documentation is provided in Appendix A.

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of walking on the site and along public sidewalks (for viewing of adjacent/nearby properties). Limiting conditions were not encountered during the site reconnaissance.

5.2 General Site Setting

At the time of the site reconnaissance, the site was developed with one single-wide trailer, one quadruple-wide trailer, one maintenance garage, and parking. The remainder of the site was used for equipment and material storage for the City of Escondido, DPW and heavy equipment operation training for DPW employees. The parking area was located in the northwest corner of the site. The single-wide trailer was improved with a common hallway, two offices, a storage room, and a bathroom and used by a non-profit recycling organization. The quadruple-wide trailer was improved with a large classroom, common hallway, kitchen, offices, and a multi-stall shower/bathroom. The maintenance garage is a pre-fabricated metal building with four, approximately 20-foot high, roll-up doors, which is an open space with various supplies stored (e.g., waddles, metal pipes, bags of concrete) and utilized for painting. The floors were covered with cardboard and sheets of wood and there were one- and five-gallon buckets of paint stored in the northwest corner of the building. At a location east of the maintenance garage and west of the eastern site boundary, a grated inlet was observed, which is at the approximate location of the former creek (referred to as an intermittent creek on the topographic maps and an unlined drainage ditch in Section 4.5) observed on aerial photographs.

The remainder of the site is used by the DPW for storage by the various departments (i.e., utility, water, street, park) and heavy equipment training (e.g., backhoe operators), except for a location on the west side that is leased to EDCO, a disposal corporation, for the storage of empty roll-off bins. The department storage areas consist of relatively organized piles of

equipment relevant to that department; for example, there are piles of street light posts and lamps for the street department and piles of PVC, metal, and concrete pipes for the water department. There were various portable, locked storage bins located along the southeast and southwest perimeter of the site. The storage bins were reported to contain tools and supplies for the different departments within the DPW (e.g., electrical department, street department). Along the east perimeter of the site, near the center, four-foot concrete walls create bin areas for the storage of materials (e.g., sand, class II base, asphalt). In the southeast corner of the site, a raised metal corrugated storm drain inlet with a large opening cut in the side was observed. Near the west-southwest corner of the site is a secured metal roll-off bin labeled with "danger/asbestos" caution tape behind a locked, fenced compound with asbestos warning plaques. The asbestos containing material is reportedly from city property demolitions. Near the west side of the property and southern most gate entrance, is a storage area of empty metal roll-off bins from EDCO; the storage space is provided/leased by the DPW to EDCO.

The central portion of the site consists of various stockpiles of soil at various drying stages. The stockpiles of soil are predominantly generated from the hydrovac pond on the east side of the property. Soil that is hydro-vacuumed from City of Escondido projects, where subsurface maintenance and/or repairs are being performed, is brought to the site and placed in the hydrovac pond where the soil is allowed to settle and the water is either removed or allowed to percolate into the subsurface. The soil is then placed in a stockpile to dry. The movement of soil is part of the heavy equipment training at the site. The northern most stockpile was covered with vegetation.

Beyond and parallel to the southwest site boundary, is an asphalt-paved bike and foot path. The path continues westward beyond the west-southwest corner of the site, and at this location, an inlet surrounded by sand bags on one side and concrete on the other was observed. Markings on the concrete were interpreted to identify a storm drain. The location of the inlet is similar to the former creek location seen in aerial photographs.

5.3 Adjacent Property Observations

Adjacent properties were observed from the site and from publicly accessible vantage points (e.g., streets, sidewalks) during the site reconnaissance. The properties adjacent to the site were as follows and as depicted on Figure 2:

- **North:** West Washington Avenue followed from northeast to northwest by Site One Landscape Supply (900 West Washington Avenue), vacant building (910 West Washington Avenue), Master Brake and Muffler (930 West Washington Avenue), AT&T (950 West Washington Avenue), and Escondido Disposal Inc. (1044 West Washington Avenue).

- **East**: Cemex (849 West Washington Avenue) and beyond is the Reidy Creek concrete-lined channel.
- **South**: Sprinter Operations Facility (1021 West Washington Avenue) and beyond are railroad tracks.
- **West:** The shared access driveway/road and beyond a property used by EDCO (1035 West Washington Avenue).

5.4 Site Observations

Ninyo & Moore evaluated the site for evidence of the following potential environmental concerns:

Table 8 – Onsite Observations

Conditions	Observed or Noted	Comments
Hazardous Substances/Petroleum Products	X	The 1- and 5-gallon containers of paint were observed in the maintenance garage.
Waste Generation/Storage/Disposal	X	Various bins of trash and were observed on portions of the site. One bin, marked as asbestos was observed in a locked, fenced area
ASTs		Not observed
Potential Evidence of USTs		Not observed
Potential PCB-Containing Equipment		Not observed
Chemical/Petroleum Odors		Not observed
Concrete Patches/Pads		Not observed
Pools of Liquid		Not observed
Sewage Discharge Pipes		Not observed
Floor Drains/Sumps		Not observed
Elevator		Not observed
Wells		Not observed
Drums		Not observed
Unidentified Substance Containers		Not observed
Stained Soil or Pavement		Not observed
Stressed Vegetation		Not observed
Pits, Ponds, or Lagoons	X	Hydrovac pond
Wastewater Discharges Disposal Systems		Not observed
Septic Systems/Cesspools		Not observed
Municipal Solid Waste Disposal Areas		Not observed

6 VAPOR ENCROACHMENT/INTRUSION

Ninyo & Moore performed a preliminary vapor encroachment screening as detailed in Section 6.1 and identified low levels of petroleum and non-petroleum VOCs as a VEC. At the request of the client, a Tier 2 VEC assessment was performed as detailed in Section 6.2. The potential for VECs beneath the site was evaluated using a Vapor Encroachment Screening Matrix (VESM) and Tier 2 VEC assessment in accordance with ASTM E 2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.

6.1 Preliminary Vapor Encroachment Screening

The purpose of the preliminary vapor encroachment screen is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of potential contaminants of concern (COC) vapors in subsurface soils at the site caused by the release of vapors from contaminated soil or groundwater either on or near the site. The VESM included performing a Search Distance Test to identify if there are any known or suspect contaminated properties surrounding or upgradient of the site within specific search radii, a COC Test (for those known or suspect contaminated sites identified within the Search Distance Test) to evaluate whether or not COCs are likely to be present, and a Critical Distance Test to evaluate whether or not COCs in a contaminated plume may be within the critical distance of the site (100 feet for non-petroleum hydrocarbon contaminants and 30 feet for petroleum hydrocarbon contaminants).

Based on the completion of the VESM, the low levels of petroleum and non-petroleum VOCs found onsite were considered a VEC and a Tier 2 VEC Assessment was recommended. A copy of the VESM is included in Appendix F.

6.2 Tier 2 VEC Assessment

The Tier 2 VEC assessment was performed using the EPA Vapor Intrusion Screening Level (VISL) calculator, a risk-based screening program used to evaluate whether contaminants pose a health concern through the soil gas intrusion pathway to property occupants. A Tier 2 assessment applies conservative numeric screening criteria to existing soil gas and/or groundwater analytical data to evaluate if a vapor intrusion concern (VIC) exists.

The highest onsite dissolved MTBE and PCE concentrations, 49 µg/l and 15 µg/l, respectively were utilized in the VISL calculator to provide risk estimates for commercial/industrial exposures. The resulting risk values, 7.63×10^{-9} and 7.52×10^{-7}, respectively are an order of magnitude or more below the accepted carcinogenic risk value of 1×10^{-6}.

The potential for non-cancer adverse health effects that may result from exposure to environmental chemicals are measured by comparing an estimated average daily dose against reference concentrations known to be associated with no adverse effects. The ratio of the estimated daily dose and the reference concentration is known as a Hazard Quotient (HQ). Implicit in the HQ calculation is the assumption of a threshold level of exposure below which no adverse effects are expected to occur. For example, if the HQ exceeds unity (1.0) (because site-specific exposure concentration exceeds the reference concentration), then the potential for non-cancer adverse effects may exist. In general, the greater the value above 1.0, the greater the potential hazard. In contrast, HQs of less than 1.0 indicate that no adverse health effects are expected to occur from

exposure to chemicals at the site. The HQs for MTBE and PCE were 2.74 x 10^{-5} and 2.02 x 10^{-1}, respectively. The results of the Tier 2 VEC assessment indicate that the potential carcinogenic and the non-carcinogenic risks associated with vapor intrusion are not a concern to current or future site occupants. The VISL calculator output data is provided in Appendix F.

7 INTERVIEWS

Interviews were conducted by Ninyo & Moore with the objective of obtaining information regarding potential RECs in connection with the site. Interviews with present owners, operators, and/or occupants of the site, as well as other knowledgeable parties as appropriate, is mandated by ASTM E 1527-13. A summary of the interviews conducted is provided in the table below.

Table 9 – Interviews

Representative	Summary
Property Owner Representative	Mr. Clement Harris and Mr. Nelson Nuezca, City of Escondido DPW, completed the property background questionnaire on March 19 and 20, 2019. According to Mr. Nuezca, the site has been used for the current use since 1992 and according to historical site records was used as a railroad wye rail.
Occupant	Information provided by the occupant, City of Escondido is included in Section 4.5.
Past Owners	Past ownership entities were not made available to Ninyo & Moore during the preparation of this ESA. Therefore, interviews with past site owners were not conducted.

8 FINDINGS

Based upon the results of this Phase I ESA, the following findings are provided.

- The site is located approximately 55 feet southwest of the West Washington Avenue and Rock Springs Road intersection.
- At the time of the site reconnaissance, the site was developed with one single-wide trailer used by a non-profit recycling group; one quadruple-wide trailer used for training by various city departments (e.g., fire department); and an asphalt paved parking lot. The remainder of the site is unpaved and was used by the City of Escondido, Department of Public Works (DPW) for storage (e.g., tools, equipment, structures, soil) and heavy equipment training (e.g., backhoe operators), except for a location on the west side that was leased to EDCO, a disposal corporation, for the storage of empty roll-off bins. Near the east site boundary in the northeast corner, a grated inlet was observed, likely for a stormdrain.
- Based on a review of historical resources, the site was undeveloped prior to approximately 1896 when a railroad wye ("track and switch" easement) was developed. The remainder of the site remained undeveloped until small structures were visible in the 1980s. Four temporary buildings were moved and/or constructed onsite in approximately 2006. Initially, these buildings were the temporary location of the City of Escondido Fire Department #1. Three of the buildings are currently onsite and utilized by a non-profit recycling organization, classrooms, and a maintenance garage utilized for painting and storage.
- According to the environmental database report, the site was listed in three environmental databases searched, CPS-SLIC, FINDS, and HMMD.

- Based on the records for the site provided by the DEH and City of Escondido, and database search on GeoTracker, there are two closed UAR cases for the site. In 1990/1991 UAR was associated with the discovery of shallow TPH-impacted soils in an unlined drainage ditch. Approximately 70 cubic yards of soil were excavated and the case closed. An assessment was performed in 2010 for future site development and TPH-impacted soil and MTBE and PCE impacted groundwater were identified on the site. A second assessment was performed in 2012 to delineate the dissolved MTBE plume. The shallow TPH-impacted soil was concluded to be limited and the MTBE plume delineated to the northwest portion of the site. The PCE concentrations were identified as a regional impact, and arsenic concentrations in soil and metals concentrations were noted to be background levels. The DEH provided a case closure letter in 2016.

- Requests for public records were submitted to the APCD, RWQCB, and City of Escondido for industrial wastewater. No records were for found the site address.

- Based on the records provided by the DEH for the properties of potential concern in the site vicinity, potential conditions that may adversely impact the site were not identified. The low PCE and TCE concentrations in groundwater at the properties were not affiliated with the UST releases and were identified as a regional impact in closure reports with concurrence from the DEH and/or RWQCB.

- Based on the completion of the VESM, the low levels of petroleum and chlorinated VOCs found onsite were considered a VEC. A Tier 2 VEC assessment was performed using the highest MTBE and PCE groundwater concentrations and the results indicate that the potential carcinogenic and the non-carcinogenic risks associated with vapor intrusion are not a concern to current or future site occupants. No further assessment of a VEC is warranted.

9 OPINIONS

The rationale for concluding whether the conditions listed in Section 8, above, represent RECs, HRECs, or CRECs (i.e., the presence or likely presence of hazardous substances or petroleum products on a property due to any release to the environment, under conditions indicative of a release, or a material threat of a future release of hazardous substances, pollutants, contaminants, and/or petroleum/petroleum products at the site) is provided below.

9.1 Evaluation of Recognized Environmental Conditions

This assessment has identified conditions indicative of former releases at the site. TPH-impacted soils were identified in an unnamed drainage ditch at the site in 1990 and approximately 70 cubic yards of soil were excavated from the drainage ditch. The source was identified as the adjacent property to the east, as surface water flow was documented coming from that property. Investigations in 2010 and 2012 identified TPH concentrations in soil (adjacent to 1990-identified, TPH-impacted soil) and MTBE, PCE, and metal concentrations in groundwater above MCLs. No further investigation was required by the DEH and the case was closed with residual contamination left in place. The TPH-impacted soil, dissolved MTBE, PCE, and metals concentrations are considered CRECs for the site.

9.2 Data Gaps

Significant data gaps were not encountered.

9.3 Additional Appropriate Investigation

It is our opinion that additional appropriate investigation to evaluate RECs at the site is not required at this time.

10 CONCLUSIONS

We have performed a Phase I ESA, in conformance with the scope and limitations of the ASTM Practice E 1527-13, of the property located at 901 West Washington, Escondido, California. Any exceptions to, or deletions from, this practice are described in Section 1.4 and in the body of this report. This assessment has revealed no evidence of RECs in connection with the property, except for the following:

CREC – TPH concentrations in soil and MTBE, PCE, and metal concentrations in groundwater above MCLs. TPH-impacted soils were identified in an unnamed drainage ditch at the site in 1990 and approximately 70 cubic yards of soil were excavated from the drainage ditch. The source was identified as the adjacent property to the east, as surface water flow was documented coming from the site. Investigations in 2010 and 2012 identified TPH concentrations in soil (adjacent to 1990-identified, TPH-impacted soil) and MTBE, PCE, and metal concentrations in groundwater above MCLs. No further investigation was required by the DEH and the case was closed with residual contamination left in place.

11 RECOMMENDATIONS

Preparation of a soil and groundwater management plan (SGWMP) is recommended for proposed onsite construction. The purpose of the SGWMP is to mitigate exposure and construction delays in the event that adverse environmental conditions are encountered during soil and groundwater disturbance activities associated with a construction project. The plan includes, but is not limited to, observation and monitoring activities in areas with potential soil contamination (CREC) and/or if contaminated or potentially contaminated soil and/or groundwater are encountered; community health and safety; roles and responsibilities of the contractor; and handling, sampling, transportation, and disposal, as applicable, of contaminated or potentially contaminated soil and/or groundwater.

PRELIMINARY REPORT

Dated as of February 21, 2019 at 7:30 a.m.

In response to the application for a policy of title insurance referenced herein, Commonwealth Land Title Company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.
The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitation on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

The policy(s) of title insurance to be issued hereunder will be policy(s) of **Commonwealth Land Title Insurance Company.**

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered. It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Order No: 09208992-920-CMM-CM8

SCHEDULE A

The form of policy of title insurance contemplated by this report is:

A Preliminary Report Only

The estate or interest in the land hereinafter described or referred to covered by this report is:

A FEE

Title to said estate or interest at the date hereof is vested in:

Assessor's Parcel Number: **232-090-72**

Order No: 09208992-920-CMM-CM8

SCHEDULE B – Section A

The following exceptions will appear in policies when providing standard coverage as outlined below:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.

2. Any facts, rights, interests or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.

4. Any encroachment, encumbrance, violation, variation or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the Public Records.

6. Any lien or right to a lien for services, labor or material not shown by the Public Records.

Order No: 09208992-920-CMM-CM8

SCHEDULE B – Section B

At the date hereof Exceptions to coverage in addition to the printed exceptions and exclusions in said policy form would be as follows:

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2019-2020.

B. There were no taxes levied for the fiscal year 2018-2019 as the property was vested in a public entity.

C. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. Provisions in a deed prohibiting the buying, selling or handling of intoxicating liquors on said Land:

   Recording No.: in Book 180, Page 422 of Deeds

   and Recording No: in Book 566, Page 137 of Deeds

   An Agreement recorded January 24, 1934 in Book 257, Page 490 of Official Records provides that a violation of said restriction shall not defeat nor render invalid the lien of any mortgage or deed of trust made in good faith and for value.

   The exact location and extent of said easement is not disclosed of record.

3. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	Escondido Irrigation District
Purpose:	pipelines and ditches
Recording Date:	August 1, 1895
Recording No:	in Book 238, Page 390 of Deeds

   The exact location and extent of said easement is not disclosed of record.

4. Easement(s) for the purpose(s) shown below and rights incidental thereto as reserved in a document;

Reserved by:	Eli Hockett
Purpose:	construct crossing
Recording Date:	January 10, 1896
Recording No:	in Book 246, Page 322 of Deeds

   The exact location and extent of said easement is not disclosed of record.

5. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document.

Redevelopment Agency:	Escondido Redevelopment Plan and Project Area
Recording Date:	December 27, 1984
Recording No:	as Instrument No. 84-481265 of Official Records

6. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other matters shown on

Map: Record of Survey Map No. 12935

7. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other matters shown on

Map: Record of Survey Map No. 15913

8. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	North San Diego County Transit Development Board Grantee
Purpose:	joint driveway
Recording Date:	November 21, 2001
Recording No:	as Instrument No. 2001-0853935 of Official Records
Affects:	said land more particularly described therein

Matters contained in that certain document

Entitled:	Correction Deed Joint Driveway Easement
Recording Date:	August 8, 2007
Recording No:	as Instrument No. 2007-0529945 of Official Records

Reference is hereby made to said document for full particulars.

9. Matters contained in that certain document

Entitled:	Easement Maintenance Agreement
Recording Date:	November 21, 2001
Recording No:	as Instrument No. 2001-0853936 of Official Records

Reference is hereby made to said document for full particulars.

10. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	San Diego Gas & Electric Company, a Corporation
Purpose:	public utilities, ingress and egress
Recording Date:	April 21, 2006
Recording No:	as Instrument No. 2006-0279767 of Official Records
Affects:	said land more particularly described therein

11. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	San Diego Gas & Electric Company, a Corporation
Purpose:	public utilities, ingress and egress
Recording Date:	May 25, 2006
Recording No:	as Instrument No. 2006-0371748 of Official Records

The exact location and extent of said easement is not disclosed of record.

INFORMATIONAL NOTES SECTION

1. The information on the attached plat is provided for your convenience as a guide to the general location of the subject property. The accuracy of this plat is not guaranteed, nor is it a part of any policy, report or guarantee to which it may be attached.

2. For wiring Instructions please contact your Title Officer or Title Company Escrow officer.

3. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

4. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

5. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

6. Due to the special requirements of SB 50 (California Public Resources Code Section 8560 et seq.), any transaction that includes the conveyance of title by an agency of the United States must be approved in advance by the Company's State Counsel, Regional Counsel, or one of their designees.

ATTACHMENT ONE

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and

b. in streets, alleys, or waterways that touch the Land.
This Exclusion does not limit the coverage described in Covered Risk 11 or 21.

7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% % of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% % of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

(Except as provided in Schedule B - Part II,(t(or T)his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

(PART I

(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.

4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:)

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.
7. (Variable exceptions such as taxes, easements, CC&R's, etc. shown here.)

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (12-02-13)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

FNF Underwritten Title Company	FNF Underwriter
LTC – Lawyers Title Company	CLTIC – Commonwealth Land Title Insurance Co.

Available Discounts

DISASTER LOANS (CLTIC)
The charge for a Lender's Policy (Standard or Extended coverage) covering the financing or refinancing by an owner of record, within 24 months of the date of a declaration of a disaster area by the government of the United States or the State of California on any land located in said area, which was partially or totally destroyed in the disaster, will be 50% of the appropriate title insurance rate.

EMPLOYEE RATE (LTC and CLTIC)
No charge shall be made to employees (including employees on approved retirement) of the Company or its underwritten, subsidiary or affiliated title companies for policies or escrow services in connection with financing, refinancing, sale or purchase of the employees' bona fide home property. Waiver of such charges is authorized only in connection with those costs which the employee would be obligated to pay, by established custom, as a party to the transaction.

Notice of Available Discounts Mod. 10/21/2011

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

Types of Information Collected
We may collect two types of information from you: Personal Information and Browsing Information.

Personal Information. FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.*, Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.*, loan or bank account information); and
- other personal information necessary to provide products or services to you.

Browsing Information. FNF may automatically collect the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or mobile device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website

How Personal Information is Collected
We may collect Personal Information about you from:

- information we receive from you on applications or other forms;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

How Browsing Information is Collected
If you visit or use an FNF Website, Browsing Information may be collected during your visit. Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics
Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to other websites. FNF is not responsible for the privacy practices or the content of any of those other websites. We advise you to read the privacy policy of every website you visit.

Use of Personal Information
FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and third parties' products and services, jointly or independently.

When Information Is Disclosed
We may make disclosures of your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

Copyright © 2018. Fidelity National Financial, Inc. All Rights Reserved

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Please see "**Choices With Your Information**" to learn the disclosures you can restrict.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to guard your Personal Information. We limit access to nonpublic personal information about you to employees who need to know that information to do their job. When we provide Personal Information to others as discussed in this Privacy Notice, we expect that they process such information in compliance with our Privacy Notice and in compliance with applicable privacy laws.

Choices With Your Information
If you do not want FNF to share your information with our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties, except as permitted by California law.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not share information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are meant for adults and are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence for any of the purposes described in this Privacy Notice. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except (1) as required or authorized by contract with the mortgage loan servicer or lender, or (2) as required by law or in the good-faith belief that such disclosure is necessary to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Copyright © 2018. Fidelity National Financial, Inc. All Rights Reserved

Your Consent To This Privacy Notice; Notice Changes
By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The revised Privacy Notice, showing the new revision date, will be posted on the FNF Website. Each time you provide information to us following any amendment of this Privacy Notice, your provision of information to us will signify your assent to and acceptance of the terms of the revised Privacy Notice for all previously collected information and information collected from you in the future. We may use comments, information or feedback that you submit to us in any manner that we may choose without notice or compensation to you.

Accessing and Correcting Information; Contact Us
If you have questions, would like to access or correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, send your requests via email to privacy@fnf.com, by phone to (888) 934-3354, or by mail to:

This map/plat is being furnished as an aid in locating the herein described Land in relation to adjoining streets, natural boundaries and other land, and is not a survey of the land depicted. Except to the extent a policy of title insurance is expressly modified by endorsement, if any, the Company does not insure dimensions, distances, location of easements, acreage or other matters shown thereon.

PROPERTY BACKGROUND INFORMATION QUESTIONNAIRE

Site Address:	APN 232-090-72-00 City of Escondido, Department of Public Works Storage Facility (901 West Washington Avenue, Escondido, California 92025)	Project No.	108762001

*Please answer *in good faith and to the best of your ability* and elaborate as much as possible on any question answered "yes."

General Environmental

1) Describe the current uses of the site. How long has the site been used for these purposes?

Public Works storage yard for materials, aggregate, and equipment. The site also acts as heavy equipment training area for City employees. Three temporary structures used as Recycling Division offices and storage are located in the northeastern portion of the parcel. It appears the property has been used for the current use since 1992.

2) Describe the structures previously present at the site and their usage/occupants and age.

Three temporary structures used as Recycling Division offices and storage are located in the northeastern portion of the parcel. Historical site records showed the site was previously used as a railroad wye rail.

3) When were the structures constructed, if known?

The metal storage building was constructed in 2007. The other two temporary buildings appeared to be relocated to the site approximately in 2007.

4) What is the historical land use of the site? Describe the past uses, owners, and operators of the site. (Be as detailed as possible and note approximate time periods, if known.)

Equipment Staging Area

Before the property was owned by the City, historical site records showed that the property was previously used as a railroad wye rail.

5) Are there currently, or were there previously any underground storage tanks (USTs) at the site? If so, please describe their capacities and contents.

NO

6) Have all USTs been removed from the site? If so, when?

N.A.

7) Was associated underground piping associated with the USTs removed?

N.A

8) Was soil and/or groundwater sampling conducted at the time of UST removal? If so, please describe.

N.A.

9) Are you aware of any environmental issues associated with the site or of potential soil and/or groundwater contamination?

[ ] Yes [x] No

PHASE I ESA
USER QUESTIONNAIRE

Property Name/Address: APN 232-090-72-00
City of Escondido, Department of Public Works Storage Facility (901 West Washington Avenue, Escondido, California 92025)

Please respond to all of the following questions to the best of your knowledge. The purpose of this questionnaire is to assist the user (the client or party seeking to use the Phase I ESA) and the environmental professional in gathering information from the user that may be material to documenting Recognized Environmental Conditions (RECs) at the site. Please note that the user of the Phase I ESA (the client), if seeking protection from CERCLA liability, must adhere to a set of user responsibilities as defined by the ASTM International (ASTM) Standard Practice E1527-13 and the United States Environmental Protection Agency (EPA) 40 Code of Federal Regulations Part 312 titled "Standards and Practices for all Appropriate Inquiries (AAI)". Failure to provide this information could result in a determination that AAI is not complete.

Per Section 6 of ASTM Standard E1527-13 and 40 CFR Part 312 of the AAI rule, the user's responsibilities include, but are not limited to, the following:

- review reasonably ascertainable land title records, lien records, and/or judicial records to search for environmental cleanup liens or activity and use limitations (AULs) against the site filed or recorded under federal, tribal, state, or local law, or engage a title company to review such records. Evidence of environmental liens and/or activity and use limitations on the site, if discovered, must be provided to the environmental consultant;
- report to the environmental professional specialized knowledge or experience material to RECs in connection with the property;
- report to the environmental professional knowledge of environmental liens or AULs encumbering or in connection with the property;
- consider the relationship of the purchase price of the property to its fair market value and whether a lower purchase price is related to potential contamination;
- report to the environmental professional commonly known or reasonably ascertainable information material to RECs; and
- report to the environmental professional the reason for conducting the Phase I ESA.

User responsibilities, CERCLA liability relief, and AAI components are discussed in the AAI rule and in the ASTM E1527-13 standard.

1) **Environmental cleanup liens that are filed or recorded against the property (40 CFR 312.25).**

Did a search of recorded land title records (or judicial records where appropriate) identify environmental liens filed or recorded against the property under federal, tribal, state or local law?
☐Yes ☒No

2) **Activity and use limitations (AULs) that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi).**

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls, that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?
☐Yes ☒No

3) **Specialized knowledge or experience of the person seeking to qualify for the liability protections (40 CFR 312.28).**
As the user of this Phase I ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
☐Yes ☒No If yes, please describe:

4) **Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).**
a) Does the purchase price being paid for this property reasonably reflect the fair market value of the property?
☐Yes ☐No ☒Not applicable (No Property Purchase Involved)

b) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
☐Yes ☐No ☒Not applicable

c) If there is a price difference, please describe:

PHASE I ESA
USER QUESTIONNAIRE

Property Name/Address: APN 232-090-72-00
City of Escondido, Department of Public Works Storage Facility (901 West Washington Avenue, Escondido, California 92025)

5) **Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).**
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as the user,

a) Do you know the past uses of the property?
☐ Yes ☒ No If yes, please describe:

b) Do you know of specific chemicals that are present or once were present at the property?
☐ Yes ☒ No If yes, please describe:

c) Do you know of spills or other chemical releases that have taken place at the property?
☐ Yes ☒ No If yes, please describe:

d) Do you know of any environmental cleanups that have taken place at the property?
☐ Yes ☒ No If yes, please describe:

6) **The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**
As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?
☐ Yes ☒ No If yes, please describe:

7) **What is the reason for having the Phase I ESA performed (ASTM 1527-13, Section 6.8)?**

To design and construct MFRO Facility on a portion of the parcel.

8) **Are you aware of any previously prepared documentation for the site, such as:**

- previous Phase I ESA or Phase II ESA reports
- environmental sampling, compliance audit, or assessment reports
- environmental permits
- registrations for aboveground or underground storage tanks
- registrations for underground injections systems
- material safety data sheets (MSDS)
- community right-to-know plans,
- safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans
- geotechnical or hydrogeologic reports
- storm water documents
- risk assessments
- hazardous waste generator notices

☒ Yes ☐ No If yes, please describe: County of San Diego Closure Documents, Site Assessment Report dated 3/15/13, and other related documents have been provided to Ninyo and Moore.

1.0 INTRODUCTION

BBC Environmental, Inc. (BBC) was retained by the City of Escondido (Escondido) to oversee the performance of limited environmental site assessments beneath the site located at 901 West Washington Avenue in Escondido, California (site)(Figure 1; Site Vicinity Map and Figure 2; Site Map). These site characterization activities were requested in an effort to assess environmental impacts that may need to be considered prior to potential site development projects. The purpose of this scope of work is to determine if potential soil and/or groundwater impacts are present at depth beneath the site as a result of facility operations.

BBC performed two assessment events in total. The first assessment event was conducted on November 22nd and 23rd, 2010 at which time twelve direct-push borings were installed and both soil and groundwater samples were collected and analyzed. Findings from the November 2010 event included the detections of low-level methyl tertiary butyl ether (MTBE) and tetrachloroethene (PCE) impacts to groundwater in the northwestern portion of the site. The second assessment event was conducted on April 25th, 2012 during which four additional direct-push borings were installed in an effort to delineate the low-level MTBE impacts beneath the site. PCE data was also collected from groundwater sample analyses performed during the second assessment event; however, observations suggest that PCE impacts to groundwater in the site vicinity are likely a regional problem and not the direct result of site operations. The line of evidence supporting PCE impacts to groundwater being a regional problem is presented in Section 7.0 of this report.

Following a brief site and area background description, evaluations of site conditions are then provided using the results of the two most recent investigations in combination with the prior historical data. Findings, conclusions, and a recommendation for no further action are made at the end of this report.

2.0 SITE BACKGROUND

The site background, including historical activities at the site is summarized in this report section. The bibliography at the end of this report provides specific references.

2.1 SITE LOCATION AND PROPERTY OWNERSHIP

The subject property is currently identified as:

Western Public Works Yard
901 W. Washington Avenue
Escondido, CA. 92025

The County of San Diego Assessor's Office has assigned the subject property Assessor Parcel Number (APN) 230-090-72.

The subject property is currently owned by:

City of Escondido
201 N. Broadway
Escondido, CA. 92025

Historical records indicate that Nachant Environmental, Inc. (NEI) was contracted by the North County Transit District (NCTD) to perform a preliminary site assessment on a 16 acre parcel (that included the subject property) prior to NCTD purchasing the property. The preliminary site assessment was performed in December 1990 and NCTD subsequently purchased the parcel in approximately January 1991 (NEI, 1990). As part of this NCTD purchase, a portion of the

parcel purchased by NCTD was sold to the City of Escondido. The property acquired by the City of Escondido is the subject site of this investigation.

The subject property is located mid-block on the south side of West Washington Avenue between Metcalf Street and North Spruce Street in Escondido, California (Figure 1). The site is commonly referred to as the Western yard of the Public Works facility. The site is currently operating as a public works storage yard for materials, aggregate, and equipment. The site also acts as a heavy equipment training area for City employees. Three temporary structures used as field operation offices and storage are located in the northeastern portion of the parcel (Figure 2). Stockpiles of soils, aggregate, and materials are present centrally on the property, and in segregated staging areas along the eastern boundary. Salvaged and recyclable equipment including potential asbestos containing materials (ACMs) and electrical components were observed along the southwest property line.

Historical site records and aerial photographs reveal the prior presence of a railroad wye rail. The wye rail is a triangular arrangement of track that was used to turn trains around. The wye rail was observed during NEI site assessment activities in December 1990 (NEI, 1990) but was not observed at the site during these most recent investigations.

The site is bounded on the east by Palomar Transit Mix and to the southeast by the Reidy Creek storm drain channel. Across Reidy Creek storm channel to the southeast is the Eastern yard of the Public Works facility. The properties are accessible from one another via a bridge over Reidy Creek. To the south and southwest, the site is bounded by the Inland Rail Trail and the Sprinter Rail operations. To the west, the site is bounded by Bombardier Transportation providing fleet maintenance to the Sprinter rail. And across West Washington Avenue to the north are commercial and industrial businesses including John Deere Landscape and Escondido Disposal, Inc.

The County of San Diego Department of Environmental Health, Land and Water Quality Division, Site Assessment and Mitigation Program (SAM) has previously assigned the subject property Unauthorized Release Number H20272-003. The case was opened following the discovery of shallow soil impacts of TPH within an unlined drainage ditch. The ditch reportedly provided site drainage from the northeast to southwest across the property. The case was closed by the California Regional Water Quality Control Board-San Diego Region (CRWQCB) and SAM on August 26, 1991 following a shallow soils excavation of approximately 70 cubic yards. Further discussion of prior environmental assessment activities is provided in Section 3.0. A copy of the closure letter and case closure summary are presented in Appendix A. NEI reports are listed in Section 12, Bibliography of this report.

3.0 RELEASE DESCRIPTION AND PRIOR ENVIRONMENTAL ASSESSMENT

A review of historical site records available at SAM and through available database queries revealed one unauthorized release report (URR) assigned to the site. The URR was generated following the NEI site survey visit performed on December 4, 1990. During the site visit, NEI personnel observed a site drainage ditch receiving runoff from the adjacent Palomar Transit Mix facility. The runoff water in the ditch was noted to have a, "…solvent and/or hydrocarbon odor." (NEI, 1990). One soil sample from shallow soils beneath the "sludge" was sampled, analyzed, and found to contain Total Petroleum Hydrocarbons (TPH) in the diesel range above recognized SAM action levels.

NEI recommended and performed shallow soil and groundwater sampling including the installation of six soil borings and the collection of 5 groundwater samples at the NCTD site. Only a portion of this work (borings B-1, B-2, and B-3, and a single soil sample from the drainage ditch) appears to have been performed on the property that is currently the Western yard (NEI, 1990). Soil and groundwater samples were analyzed for the presence of petroleum products. Laboratory analytical results indicated that no detectable concentrations of TPH were reported above laboratory detection limits, with the exception of the one soil sample collected from the drainage ditch on the subject property.

In January and February of 1991, a total of 21 soil samples were collected from the site drainage ditch (NEI, 1999a). TPH impacts as high as 392 milligrams per kilogram (mg/kg) and TRPH impacts as high as 4,590 mg/kg were reported in these shallow soil samples. A limited remedial excavation was performed in April 1991. The excavation removed suspect soils from the drainage ditch to a depth not exceeding 4.5 feet below ground surface (bgs). The excavation was estimated to be approximately 415 feet in length as measured from the common border with the Palomar Ready Mix property (NEI, 1991b). Approximately 70 cubic yards of soil were removed from the ditch. And in May 1991 the remaining stockpiled soils were transported and disposed of at the Sycamore Landfill.

In June 1991, NEI petitioned for case closure stating that no further environmental assessment actions appeared necessary. And on August 26, 1991 SAM and the RWQCB concurred and issued their administrative closure for the case.

4.0 GEOLOGY AND HYDROLOGY

The surface geology at this site is depicted on published geologic maps as older alluvial flood plain surficial deposits. These sedimentary units are moderately well consolidated, poorly sorted, permeable flood plain deposits of the Pleistocene Epoch of the Quaternary Period (USGS, 1999). Surrounding elevated areas consist of granitic bedrock of the Cretaceous Period.

As reported in boring logs prepared during the two BBC assessment events and previous investigations, geologic materials beneath the site consist of silty and clayey fine to medium sands overlying decomposed granitic rock. Boring logs from a geotechnical investigation performed by Geocon Consultants in October 2010 identify weathered granitic rock occurring onsite between 19 and 25 feet bgs (Geocon, 2010). Refusal was encountered during the BBC direct-push investigations at locations SB-5 (~18 feet bgs) and SB-6 (~17 feet bgs) in the southeastern portion of the site, and again at location SB-13 (~18 feet bgs) in the northwestern portion of the site. All other direct-push locations were successfully extended to a total depth of approximately 20 – 22.5 feet bgs.

Groundwater beneath the site has been mapped by the California Regional Water Quality Control Board (CRWQCB) to be located in the Escondido Hydrologic Subarea of the Escondido Creek Hydrologic Area of the Carlsbad Hydrologic Unit and is identified by the Hydrologic Unit Basin Number 904.62 (CRWQCB, 1994). The CRWQCB has determined that groundwater beneath the site has existing beneficial uses including municipal, agricultural, and industrial service supply. Near site groundwater monitoring wells have reported depths to first groundwater as shallow as 13 feet bgs. Groundwater was encountered during BBC assessment activities from approximately 13 to 22 feet bgs.

Since no permanent groundwater wells were installed, a calculated groundwater gradient is not available at this time. However, the site proximity to both the Reidy Creek storm drain channel and the Escondido Creek storm drain channel suggests that groundwater flow in the area may range in direction from southeast to southwest. The site is bounded by Reidy Creek to the southeast. Escondido Creek is located south of the adjacent Sprinter Rail operations. The confluence of the two storm drain channels lies to the south and we have estimated the groundwater flow direction to be towards the confluence for the purposes of this report (Figure 3 and Figure 4).

DWR records indicate that groundwater quality in the Basin is generally sodium chloride in type, with subordinate amounts of magnesium, calcium, bicarbonate, and nitrate ions. Total dissolved solids (TDS) content ranges from 250 milligrams per liter (mg/L) to more than 5,000 mg/L. Local sources of groundwater in the Basin are categorized as suitable to inferior for domestic use. The water categorized as inferior typically contains high nitrate, TDS, or sulfate content (DWR, 1967).

Reidy Creek's flow path is concrete lined acting as a storm water channel to its intersection with State Highway 78 approximately 0.75 miles north of the site. The majority of the Escondido Creek's flow path is also concrete lined through the developed portions of Escondido. Escondido Creek is partially fed by Lake Dixon and Lake Wohlford, which are located approximately 3 and 5 miles to the northeast. Escondido Creek is tributary to San Elijo Lagoon located approximately 15 miles to the southwest.

The inland surface waters of Reidy (Canyon) Creek, Escondido Creek, Lake Dixon, and Lake Wohlford have been mapped by the CRWQCB to be located in the Escondido Watershed (CRWQCB, 1994). These surface waters have been determined to have existing beneficial uses including municipal and domestic supply, agricultural supply, hydropower generation (except Lake Dixon), contact and non-contact water recreation, warm and cold freshwater habitat, and wildlife habitat. These surface waters have also been determined to have potential beneficial industrial service supply uses.

According to a Preliminary Water Quality Technical Report prepared for the City of Escondido, Reidy Creek, Escondido Creek, San Elijo Lagoon, and the Pacific Ocean at the San Elijo Lagoon outlet are beneficial use impaired water bodies (Fuscoe, 2010). Reidy Creek is impaired from phosphorous. Escondido Creek is impaired from dichlorodiphenyltrichloroethane (DDT), manganese, phosphate, selenium, sulfates, and total dissolved solids.

5.0 POTENTIAL SENSITIVE RECEPTOR SEARCH

Prior consultants have performed research with respects to potential sensitive receptors and groundwater use in the site vicinity. Sensitive receptor research was performed within a 2,500-foot radius of the adjacent Eastern yard of the Public Works facility located at 475 North Spruce Street. The research included searches for domestic or production water supply wells, surface water bodies, schools and day care centers (Secor, 2004). The research reportedly utilized 1) review of the County of San Diego, DEH water well database, 2) review of the State Water Resources Control Board (SWRCB) GeoTracker database, 3) review of USGS Escondido and Valley Center, California 7.5-minute quadrangle topographic maps; and 4) site reconnaissance of properties located within a 2,500-foot radius.

According to reported survey results, no private or public supply wells were identified within the imposed 2,500-foot radius. Further, no schools or day care centers were identified within the imposed 2,500-foot radius.

A survey of the storm channels and the current state of the concrete competency was not performed as a part of this investigation. Initial review of elevational survey data collected from the two channels indicates that the mean sea level (msl) elevation of the invert depth of the base of the storm channels is below that of the observed historical groundwater levels at the adjacent Eastern Public Works yard. This appears to suggest that groundwater emanating from beneath the site could possibly enter the storm channels through breaches and/or penetrations in the concrete.

BBC performed a limited potential sensitive receptor search by reviewing available data records for schools, daycares, and eldercare facilities queried on public internet search engines. BBC identified one private school and one daycare located within a 0.5-mile (2,640-foot) radius of the site:

1.) Christian L.I.F.E. Academy – Private School serving grades 1-12
613 West Valley Parkway, Escondido, CA 92029
(Located approximately 0.4-miles southeast of the subject site)
2.) Ursela's Daycare Center
103 Howell Heights Drive, Escondido, CA 92029
(Located approximately 0.5-miles south of the subject site)

The Christian L.I.F.E. Academy located to the southeast appears to lay down-to-cross-gradient from the site. Both storm channels lie between the site and the school and may create a hydrogeologic barrier. Additionally, dissolved-phase impacts of petroleum hydrocarbons onsite only appear at low-levels in the northwesterly section of the site. Due to the school's distance from the site, the down-to-cross-gradient location, the storm channel locations, and the low concentrations of onsite dissolved-phase impacts at the site, it is unlikely that the school would be adversely affected by known site groundwater impacts.

Ursela's Daycare Center is located to the south of the site, but is located on a topographic rise of more than 100 feet above the subject site elevation (ref:Appendix B). Due to the Daycare's distance from the site and location upon a topographic rise it is unlikely that the Daycare would be adversely affected by known site groundwater impacts.

BBC has prior knowledge of two potential supply wells located within a 0.5-mile radius of the site (BBC, 2007). While assessing environmental impacts in the vicinity of the Auto Parkway, BBC reviewed the Escondido Topographic Quadrangle Map (photo revised 1975 and 1996) that identified a potential supply well for irrigation. The well's location is mapped in the vicinity of Lambar Street at the intersection with Valley Parkway approximately 2,650 feet southwest of the site. At the time of the prior investigation there was no reference as to the then current operation of the well or if the well was known to be in operation or destroyed. No ownership data was provided.

The second potential supply well is reportedly owned and operated by Southland Paving, Inc. located at 361 North Hale Street (CE, 2000) approximately 2,400 feet west-southwest of the site. The well is operated to supply trucks with construction water. BBC contacted Southland Paving in 2007 to inquire of the well's current status. In conversation with a Southland representative it was stated that the well still existed but had not been operated for

approximately 5 years (personal communication, Mr. Bob Kennedy). The well was capped at that time and there was no anticipated use of this well in the future.

To obtain current information regarding potential supply wells within a 0.5-mile radius of the site, BBC requested documents from the Department of Water Resources (DWR) and reviewed available SWRCB data from GeoTracker's Groundwater Ambient Monitoring and Assessment (GAMA) records (http://www.waterboards.ca.gov/gama/). GeoTracker GAMA records indicate that no supply wells are listed within a 0.5-mile radius of the site. Further, records received from DWR indicate that no supply wells are listed within a 0.5-mile radius of the site.

Mapping of potential sensitive receptors and corresponding research is presented in Appendix B.

6.0 FIELD DATA COLLECTION SCOPE OF WORK

In order to initially assess the presence of potential contaminant impacts to soil and to groundwater at the subject site, BBC oversaw the installation of twelve (12) sample point locations (SB-1 through SB-12)(Figure 2) utilizing direct-push equipment in November, 2010. The operation of the direct-push equipment was performed by H&P Mobile Geochemistry (H&P) of Carlsbad, California. Field locations were selected at the property boundaries, at select equipment and materials storage areas, and in the vicinity of the former drainage ditch and current storm drain culverts. The locations of the investigation points also considered data collected from the field utility survey. No permanent monitoring points were installed in the course of this event.

Following the initial assessment performed by BBC, a second assessment event was conducted in April 2012. The work scope was performed in an effort to delineate observed low-level MTBE impacts to groundwater discovered during the initial BBC assessment activities. BBC oversaw the installation of four additional sample point locations (SB-13 through SB-16) (Figure 2). The operation of the direct-push equipment was again performed by H&P. And similarly, no permanent monitoring points were installed in the course of the event.

A brief discussion of the pre-field permitting activities performed prior to the initiation of direct-push soil and groundwater investigations during both the November, 2010 event and the April 2012 event are found in the next section. Following the permitting information is the scope of the direct-push sampling work and sample analyses completed at the site. All work was performed in accordance with approved boring installation permits issued by SAM on November 17, 2010 and again on April 16, 2012.

6.1 PERMITTING, UNDERGROUND SERVICE ALERT, AND UTILITY SURVEY

Permits for the installation of twelve (12) direct-push soil investigation points and the collection of twelve (12) groundwater samples were obtained from SAM prior to performing the initial investigation activities in November 2010. SAM Permit number LMON107483 was assigned to the permitting approval dated November 17, 2010.

Permits for the installation of four (4) direct-push soil investigation points and the collection of four (4) groundwater samples were obtained from SAM prior to performing the second round of investigation activities in April 2012. SAM Permit number LMON108436 was assigned to the permitting approval dated April 16, 2012.

Copies of both permits are presented in Appendix A.

6.2 GEOTECHNICAL BORING INSTALLATION

As part of the potential site development assessment being performed by the City of Escondido, Geocon Consultants, Inc. of San Diego, California installed three geotechnical exploration borings at the subject site in October 2010. No environmental soil sampling was performed during the installation of these geotechnical borings. However, groundwater sampling was performed through the access created by the hollow-stem auger. One groundwater grab sample was collected on October 29, 2010 from each of three geotechnical borings identified as B4, B5, and B6 (Figure 2). Results from the groundwater sampling are presented in Section 7.2 and in Table 3.

All three groundwater samples were analyzed for TPH in the gasoline range by EPA Method 8015B; and for volatile organic compounds by EPA Method 8260B. All groundwater samples collected during the event were stored in an ice-cooled chest and kept at a temperature of less than 4 degrees Celsius until delivery to a state-certified laboratory. Sample handling and relinquishment was performed under standard chain-of-custody protocols.

Further information with respects to the geotechnical assessment of the site can be found in the Geocon Consultants, Inc. report titled, *"Geotechnical Feasibility Investigation"* dated December 13, 2010 (Geocon, 2010).

6.3 SOIL SAMPLE COLLECTION AND LABORATORY ANALYSES

Soil investigation activities were performed using direct-push equipment. This technology as operated by H&P uses a lightweight hydraulic drive point system mounted to the rear of a pickup truck. The hydraulically powered probe is advanced through soils by pushing or hammering. The probe rod is approximately 2.125 inches in diameter and utilizes a split barrel sampler. The sampler is lined with a 1.5 inch by 24 inch acetate liner for sample collection. The system drives the 2.125 inch casing to within approximately 2 feet of the desired sampling depth. Once the sampler has been advanced to the top of the sampling interval, the stop-pin for the piston point that is located inside the cutting shoe is released and retracted using extension rods. The sampler is then advanced through the sampling interval. As soil enters the sampler, the piston point is displaced upward into the sample tube. The sampler is then retracted from the probe hole and disassembled.

Soil samples were withdrawn from the sampler in a 1 inch by 24 inch acetate liner. The acetate liner was removed and divided into three sections. The section advanced furthest below ground surface was selected for laboratory analysis. This section was capped with Teflon™ squares and plastic caps and then labeled and stored in an ice-cooled chest for subsequent transport to a state-certified laboratory for analysis.

The soil in one remaining section was placed into a sealed plastic bag and subsequently screened for the presence of volatile organic vapors using a photo- ionization detector (PID). The third sleeve of soil was used to assess soil characteristics using the Unified Soil Classification System. One boring location (SB-3) was selected for the collection of soils by continuous core to assist with site soil characterization. The drilling logs for both the November 2010 and the April 2012 assessment events are presented in Appendix C.

During the initial assessment event in November 2010, select soil samples from the direct-push investigation points were analyzed for TPH by DHS Modified EPA Method 8015B for gasoline

range, diesel range, and motor oil range hydrocarbons including a carbon chain analysis ranging from C_6-C_{36}; Volatile Organic Compounds (VOCs) by EPA Method 8260B; CAM Metals including mercury by EPA Method 6010B and 7471A; and Polychlorinated Biphenyls (PCBs) by EPA Method 8082.

During the second assessment event in April 2012, select soil samples from the direct-push investigation points were collected for analysis, but held until results from groundwater sampling analyses could be reviewed. Ultimately, groundwater sampling results were deemed sufficient to delineate the low-level MTBE impacts, and no additional soil samples were submitted for analysis.

Standard Operating Procedures for the H&P Strataprobe™ system and BBC field procedures for soil sampling are included in Appendix C. All soil and groundwater samples collected during the event were stored in an ice-cooled chest and kept at a temperature of approximately 4 degrees Celsius until delivery to a state-certified laboratory. Sample handling and relinquishment were performed under standard chain-of-custody protocols.

6.4 GROUNDWATER SAMPLE COLLECTION AND LABORATORY ANALYSES

Groundwater samples were collected to address potential contaminant impacts to first encountered groundwater. One groundwater sample was collected from each of sixteen borings. A total of sixteen (16) groundwater samples were collected. Each of the sixteen samples was collected within the upper 2 feet of the water table in accordance with SAM guidelines.

Prior to the actual sampling of groundwater, groundwater was allowed to recharge into the boring. Recharge times varied from a minimum of 20 minutes to greater than 2 hours. Field measurements for phase separated hydrocarbons (PSH) and depth to water were performed using an interface meter. PSH was not encountered at any of the sampling locations and groundwater samples were then collected by advancing temporary piezometer casing through the open bore hole and directly into the aquifer at the desired sampling depth. The temporary piezometer casing consisted of solid and screened sections of 1 inch polyvinyl chloride (pvc) pipe. The screened section of the pvc pipe was placed so that the screen interval was partially submerged into groundwater. Samples were then obtained using a 0.5 inch diameter bailer. No groundwater field parameters were measured during this event.

Groundwater samples collected were analyzed for TPH by DHS Modified EPA Method 8015B for gasoline range, diesel range, and motor oil range hydrocarbons; and VOCs by EPA Method 8260B. Additionally, groundwater samples collected during the initial November 2010 assessment event were analyzed for CAM Metals including mercury by EPA Method 6010B and 7470A. A carbon chain analysis ranging from C_6-C_{36} was performed. And select groundwater samples were also analyzed for Polychlorinated Biphenyls (PCBs) by EPA Method 8082.

Standard Operating Procedures for the H&P Strataprobe™ system and BBC field procedures for groundwater sampling are included in Appendix C. All soil and groundwater samples collected during the event were stored in an ice-cooled chest and kept at a temperature of approximately 4 degrees Celsius until delivery to a state-certified laboratory. Sample handling and relinquishment was performed under standard chain-of-custody protocols. Analyses performed during the April 2012 event were performed by an onsite mobile laboratory.

6.5 BORING ABANDONMENT

Following completion of groundwater sampling from each investigation point, the temporary piezometer casing was removed from the probe hole. Boring abandonment was completed using a fine granular bentonite slurry. The grout was emplaced from the total depth of each boring to approximately 0.5 feet bgs. Asphalt patching material or a matching ground surface material was placed from approximately 0.5 feet bgs to ground surface to seal the boring.

The abandonment of the twelve direct-push investigation points installed in November 2010 was completed in accordance with SAM Manual guidance and permit conditions. Submittal of the required boring installation report to SAM was performed by BBC on February 16, 2011 (BBC, 2011).

Similarly, abandonment of the four direct-push investigation points installed in April 2012 was completed in accordance with SAM Manual guidance and permit conditions. Submittal of the required boring installation report to SAM was performed by BBC on June 25, 2012 (BBC, 2012).

6.6 WASTE STREAM GENERATION AND DISPOSAL

No waste streams were generated from the two BBC assessment scopes of work. Direct-push sampling is a technology that minimizes waste stream generation such that no soil cuttings were generated during this event. All of the groundwater sample aliquots retrieved during sampling activities were placed into sampling containers. No excess groundwater was generated during this event. Decontamination water utilized in direct-push activities was transported to, and removed from the site by H&P. According to H&P, all decontamination water is contained at their offices in Carlsbad for future manifested disposal.

7.0 FIELD DATA COLLECTION RESULTS

The following sections summarize the results of the soil and groundwater sampling conducted during the November 22nd & 23rd, 2010 field event and the field event conducted on April 25th, 2012. The laboratory analytical results for the November 2010 event, as prepared by Associated Laboratories or Orange, California are presented in Appendix D. The laboratory analytical results for the April 2012 event, as prepared by H&P Mobile Geochemistry of Carlsbad, California are also presented in Appendix D.

7.1 SOIL SAMPLING RESULTS

A total of 32 soil samples were collected during the two site investigation field events. Soil samples were collected at depths ranging from 5 to 16 feet bgs. As discussed earlier in this report (Section 6.3), only the 24 soil samples from the initial November 2010 investigation were submitted for analysis.

Laboratory analytical results from the initial direct-push scope of work indicated that none of the soil samples collected contained TPH in the gasoline range (C_6-C_{10}) above laboratory reporting limits. Only one soil sample (SB-10-5) was reported to contain TPH in the diesel range (C_{10}-C_{22}) at a concentration of 8 mg/kg. Longer chain hydrocarbons (C_{22}-C_{36}) were reported in five shallow soil samples (SB-2-5, SB-3-4, SB-6-5, SB-10-5, and SB-11-5) ranging in concentration from 7.1 mg/kg to 1,210 mg/kg. Only one of these (SB-2-5) exceeded 100 mg/kg TPH.

No volatile organic compounds were detected above laboratory reporting limits in any of the soil samples analyzed.

Investigation points SB-7 and SB-8 were installed in the vicinity of the storage area observed to include electrical materials and components. Soil samples SB-7-5, SB-7-13, SB-8-5, and SB-8-16 were analyzed for PCBs, and no PCB congeners were detected above laboratory reporting limits in any of the soil samples analyzed.

A total of 10 soil samples were selected for total metals analyses. Seven of the samples were shallow samples collected between approximately 4 and 5 feet bgs. The other three soil samples were collected at depths between 13 and 16 feet bgs. Soil sampling results indicated that all ten soil samples contained concentrations of barium, total chromium, cobalt, copper, total lead, nickel, vanadium, and zinc above laboratory reporting limits. Nine of the ten contained arsenic above laboratory reporting limits. And one sample (SB-11-5) also contained concentrations of beryllium above laboratory reporting limits. All reported concentrations are below their respective Total Threshold Limit Concentration (TTLC) as determined by the California Code of Regulations (CCR), Title 22 and therefore would be considered non-hazardous (CCR, Title 22).

Concentrations of metals in soils occur naturally and are greatly dependent upon the geologic and hydrogeologic setting of the area. Further discussions with regards to reported metals concentrations at the site, establishment of background concentrations, and comparisons to human health based and environmental impact soil screening levels are presented in Section 8.0 of this report.

Soil analytical results from this investigation are summarized in Table 1 and Table 2 with complete laboratory reporting and chain-of-custody documentation in Appendix D. CCR, Title 22 TTLC's are presented in Appendix F.

7.2 GROUNDWATER SAMPLING RESULTS

In total, nineteen (19) groundwater samples are reported herein. Three groundwater samples were collected by BBC during geotechnical assessment activities in October 2010; 12 groundwater samples were collected during the November 2010 event; and an additional 4 groundwater samples were collected during the April 2012 event. All groundwater samples were grab samples collected without well purging and/or groundwater parameter monitoring or collection.

After a brief discussion about Maximum Contaminant Levels (MCLs) in groundwater, groundwater sampling results are addressed in four separate sections. The first section will address sampling results for petroleum hydrocarbons and VOCs other than PCE. The second section will address PCE impacts to groundwater identified during these assessment activities. The third section will address metals impacts to groundwater identified during the initial BBC scope of work. And the fourth section will detail the results from PCB analysis of groundwater.

7.2.1 Maximum Contaminant Levels in Groundwater

The State of California Department of Public Health is authorized to protect the public from contaminants in drinking water by the California Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65). The California Department of Public Health has established maximum contaminant levels (MCLs) for public water supplies in CCR, Title 22. MCLs have been

established for contaminants that may occur in public water systems, and may have any adverse health effects (based upon expert opinion). If a known contaminant is present in a water supply at a level that exceeds its established MCL, then action must be taken by the responsible party to protect human health and the environment where it is warranted.

The State of California has established MCLs for MTBE, PCE, and various metals in groundwater. The primary MCL for MTBE in a beneficial use aquifer is 13 ug/L. The MCL for PCE in a beneficial use aquifer is 5 ug/L. MCLs for constituents of concerns in groundwater beneath the subject property are presented at the bottom of Tables 3 and 4. The complete lists of MCLs for Organic Chemicals and for Inorganic Chemicals are presented in Appendix F.

7.2.2 Groundwater Impacts - Petroleum Hydrocarbons

None of the groundwater samples analyzed for TPH in the gasoline range (TPHg), TPH in the diesel range (TPHd), or TPH in the motor oil range (TPHmo) were reported to contain TPH concentrations above laboratory reporting limits.

Low-level concentrations of MTBE were detected in four of the nineteen groundwater samples analyzed. Sample B6 collected from geotechnical boring B6 was reported to contain MTBE at a concentration of 26 ug/L. Samples SB-9 and SB-10 were also reported to contain MTBE at concentrations of 1.9 ug/L and 49 ug/L, respectively. And sample SB-14 was reported to contain MTBE at a concentration of 1.1 ug/L. No other detections of MTBE or any other fuel oxygenates were reported above laboratory reporting limits in any of the groundwater samples collected. MTBE concentrations detected in samples B6 and SB-10 exceed the established MCL for MTBE in groundwater (Table 3).

Additional VOCs (other than PCE) reported during sampling activities included low-level detections of chloroform and p-Isopropyltoluene in sample SB-13. Lab results indicate that chloroform was detected at a concentration of 3.2 ug/L and p-Isopropyltoluene was detected at a concentration of 7.4 ug/L.

The distribution of MTBE in groundwater is shown in Figure 4. The lateral extent of the dissolved-phase plume appears fully assessed revealing a small, low concentration area of MTBE impacts in the northwestern portion of the site. Calculations for the estimated mass of MTBE in the dissolved-phase plume that exceeds the primary MCL of 13 ug/L were performed. And the estimated MTBE mass was calculated to be approximately 0.018 kilograms (kg). This is the equivalent of approximately 0.04 pounds (lbs.) of MTBE. The MTBE mass calculations are presented in Appendix F.

7.2.3 Groundwater Impacts – PCE

The only other VOC reported in groundwater above laboratory reporting limits was tetrachloroethene (PCE). Low-level concentrations of PCE were reported in seven of the nineteen groundwater samples collected and analyzed. PCE concentrations ranged from 2.2 ug/L (SB-13) to 15 ug/L (B6). And PCE concentrations detected in samples B6, SB-10, SB-12, and SB-16 exceed the established MCL for PCE in groundwater (Table 3).

The distribution of PCE in groundwater is presented in Figure 5. The lateral extent of the dissolved-phase PCE concentrations is not fully assessed north of SB-12 or southwest of SB-16. These low-level detections of PCE are consistent with prior groundwater sampling results from several nearby sites. PCE and TCE (trichloroethene) appear in groundwater throughout

the immediate vicinity suggesting a more regional concern for these constituents, rather than a specific relationship to this site. Table A below shows the range of concentrations reported from sites in the area. Document excerpts supporting this table can be found in Appendix E.

TABLE A
PCE AND TCE CONCENTRATIONS AT NEARBY FACILITIES

Address	Distance (ft.) and Direction to Site	# of Sample Points	PCE Range (ug/L)	# of Sample Points	TCE Range (ug/l)
455 North Quince Street	1235' to E	4	27 – 36	4	5.2 – 10
525 North Quince Street	1370' to E	3	3.2 – 25	3	3.4 – 17
480 North Spruce Street	490' to E	3	5.6 - 22	3	5.5 – 9.3
475 North Spruce Street	150' to E	4	5.8 - 13	7	5.3 – 15
755 Norlak Avenue	825' to SE	3	2.83 – 14.9	3	0.81 – 1.26

Notes: E=East, SE=Southeast

Groundwater analytical results for TPH and VOCs from this investigation are summarized in Table 3, with complete laboratory reporting and chain-of-custody documents presented in Appendix D.

7.2.4 Groundwater Analysis Results - Total Metals

All twelve groundwater samples collected from investigation points SB-1 through SB-12 were analyzed for total metals (commonly referred to as CAM 17 Metals). Sixteen of these metals are analyzed by EPA Method 6010B. Mercury in groundwater is analyzed by EPA Method 7470A.

All twelve groundwater samples contained detectable concentrations above laboratory reporting limits for barium, total chromium, cobalt, copper, vanadium, and zinc. Nine of the twelve samples also reported detectable concentrations for total lead and nickel. Arsenic was reported in seven wells; beryllium and molybdenum in five wells; thallium and mercury in four wells; and selenium in two wells.

Metals concentrations identified in groundwater also appear to correspond, in general, with metals concentrations identified in subsurface soils. MCLs for inorganic chemicals in a domestic or municipal use aquifer are exceeded for each metal that has an established MCL with the exception of mercury (Table 4). Concentrations reported in groundwater beneath the site are consistent with concentrations observed in groundwater samples collected by similar protocols at nearby facilities (BBC 2011b, c). Groundwater sampling using direct-push technologies (DPT) is known to negatively bias (bias high) sampling analytical results, especially for metals in a highly turbid groundwater environmental (EPA 2005). The temporary piezometers lack site specific sized screens and/or filter packs to keep formational fines from entering the temporary well point. The groundwater samples collected during this event were known to be turbid as visible sediments were observed in the sampling containers. This was a result of slow recharging wells with minimal water columns for sampling. As such, the potential for artificially high total metals results in groundwater exists in this data set.

Groundwater analytical results for metals from this investigation are summarized in Table 4, with complete laboratory reporting and chain-of-custody documents presented in Appendix D.

7.2.5 Groundwater Analysis Results - PCBs

Investigation points SB-7 and SB-8 were installed in the vicinity of the storage area observed to include electrical materials and components. Groundwater samples SB-7 and SB-8 were analyzed for PCBs, and no PCB congeners were detected above laboratory reporting limits in either of the groundwater samples analyzed.

8.0 ENVIRONMENTAL SCREENING LEVELS

One standard for evaluation of contaminant impacts in soil is to compare site specific data to established environmental screening levels and naturally occurring background levels for the constituents of concern (COCs). In this section, BBC will perform comparative analysis of reported metals concentrations in soils against the California EPA Environmental Screening Levels (ESLs) and the US EPA Region 9 Regional Screening Levels (RSLs). This method of assessment is performed an effort to set the reported concentrations of COCs in context with human health and environmental risk-based levels for commercial and industrial property uses. A brief discussion of ESLs and RSLs is presented in advance of the comparative analyses.

8.1 CALIFORNIA EPA ENVIRONMENTAL SCREENING LEVELS

The California EPA has developed ESLs through the work of the California Regional Water Quality Control Board, San Francisco Bay Region (CRWQCB (2)). The CRWQCB (2) developed ESLs for various constituents as a way to quickly identify if constituent impact concentrations would likely require further investigation and/or action to ensure public health and safety. The use of ESLs is intended to be entirely optional on the part of the regulatory oversight agency. The presence of a chemical or constituent at concentrations that exceed an ESL does not necessarily indicate that adverse impacts to human health or the environment are occurring; only that additional evaluation is likely warranted.

ESLs consider multiple routes to a potential receptor including direct exposure to human health, vapor intrusion into buildings, soil leaching to groundwater, and nuisances such as odors. ESLs are presented in various settings such as shallow soil impacts or deep soil impacts; residential land use or commercial/industrial land use; and soil impacts above groundwater with potential drinking water uses and without. This allows the analyst the opportunity to select an evaluation criterion that most closely represents site conditions.

8.2 U.S. EPA REGION 9 REGIONAL SCREENING LEVELS

EPA Region 9 has developed RSLs as a replacement to the former industry standard of Preliminary Remediation Goals (or PRGs). The former PRGs from EPA Region 9 were compiled and harmonized with similar risk-based approaches from EPA Region 3 and Region 6.

RSLs have been developed using risk assessment guidance from the Superfund program. The RSLs are generic. They can be re-calculated using site specific data. They are risk-based concentrations that are considered by the EPA to be protective of human health over a lifetime. RSLs differ from ESLs in that they do not consider non-human endpoints such as ecological impacts. The roles of the screening levels are similar in that the presence of a chemical or constituent at concentrations that exceed an RSL does not necessarily indicate that adverse impacts to human health are occurring; only that additional federal evaluation is likely appropriate.

8.3 COMPARISON OF METALS IN SOILS TO ESLs AND RSLs

Seven shallow soil samples were collected from a depth of approximately 5 feet bgs during this field event. The laboratory analytical results indicated that 10 different metals were present in soils above the laboratory reporting limit. The laboratory analytical results are presented in Table 5 and compared to California EPA ESLs and US EPA RSLs. The comparison is made in an effort to establish if additional environmental assessment of metal concentrations in site soils appears warranted.

Nine of the ten metals reported above laboratory reporting limits were not reported at concentrations exceeding California EPA ESLs for commercial and/or industrial land use or US EPA RSLs for industrial land use. Arsenic was the only constituent that was reported present at concentrations above ESLs or RSLs for commercial and/or industrial land use. Arsenic concentrations ranged from 1.10 to 2.08 mg/kg (Table 5).

Arsenic is regularly observed as a naturally occurring metal in California soils. The reported concentrations of arsenic in site soils only slightly exceeded the environmental screening level of 1.6 mg/kg. Further, in comparison to published background levels of arsenic in the southern California region, the reported concentrations in all five samples are below the 12 mg/kg upper bound for naturally occurring arsenic identified in a California Department of Toxic Substances Control (DTSC) study (DTSC, 2008). This suggests that these low level arsenic impacts reported in soils are likely naturally occurring and do not appear to warrant further investigation at this time.

9.0 FINDINGS

Soils encountered during all BBC boring installation activities appeared consistent with historical geologic logging performed at the site. Site soils consist of silty and clayey fine to medium sands overlying decomposed granitic rock. The decomposed granitic rock was encountered in only three locations at depths shallower than 20 feet bgs during these investigations. Two locations (SB-5 and SB-6) were located in the southeastern corner of the property. The third (SB-13) was located in the northwest portion of the site. Geotechnical borings installed in October 2010 indicated the occurrence of weathered granitic rock at depths between 19 and 25 feet bgs (Geocon, 2010).

Depth to first groundwater during this investigation ranged from approximately 13 feet bgs to 22 feet bgs at the site. After recharge, groundwater levels were observed between 13 and 19 feet bgs. Since no permanent groundwater wells were installed, a calculated groundwater gradient is not available at this time. However, the site proximity to both the Reidy Creek storm drain channel and the Escondido Creek storm drain channel suggests that groundwater flow in the area may range in direction from southeast to southwest. As the site is bounded by Reidy Creek to the southeast and the confluence of the two storm drain channels lies to the south we have estimated the groundwater flow direction to be towards the confluence for the purposes of this report (Figure 4 and Figure 5).

Historical records and aerial photographs were key in disclosing the location of a former ditch that meandered across the subject site from northeast to southwest (Figure 2). The drainage ditch was a known source of TRPH contamination ($>C_{23}$) which emanated from the Palomar Ready Mix facility (NEI 1991b). The remedial excavation performed along the ditch extended approximately 415 feet from the common property line Palomar Ready Mix. The excavation was unevenly dug to a depth not exceeding 4.5 feet below ground surface. The noted length of

the excavation would place the westerly end in the vicinity of boring SB-3, with the remainder of the drainage ditch continuing to the west-southwest (Figure 3).

The location of the ditch and the excavation activities are proximate to borings SB-2 and SB-3 that were installed in November 2010. And shallow soil sampling results indicate that TPHmo (C_{22} – C_{36}) was present in samples SB-2-5 and SB-3-5 at concentrations of 1,210 mg/kg and 55 mg/kg. The larger chain hydrocarbons are of the same range that were detected and remediated along the former drainage ditch in 1991 as part of closed DEH case number H20272-003. Soil samples SB-2-15 and SB-3-16 were collected at depths beneath the two shallow samples and were also analyzed for TPHmo. Both SB-2-15 and SB-3-16 were reported not to contain TPHmo above laboratory reporting limits. This vertical delineation of the soil impacts suggests that TPHmo is present in shallow soils but does not extend to groundwater. The absence of TPH in groundwater beneath the site further supports this line of evidence.

Soil sampling results indicate that TPHg was not present above laboratory reporting limits in onsite soils investigated during the November 2010 field event. Similarly, only one minor impact for TPHd was reported in shallow soil sample SB-10-5 at a concentration of 8 mg/kg.

None of the soil samples analyzed contained concentrations of VOCs above laboratory reporting limits.

Soil samples SB-7-5, SB-7-13, SB-8-5, and SB-8-16 were also analyzed for PCBs. None of the soil samples analyzed contained concentrations of PCBs above laboratory reporting limits.
Laboratory analytical results reported 10 different metals were present in soil samples collected during the November 2010 field event (Table 2). The reported metals concentrations were compared to environmental screening levels established by the California EPA (ESLs) and U.S. EPA Region 9 (RSLs) to evaluate if these concentrations may warrant further assessment. Nine of the ten identified metals were reported at levels that fell below the screening levels of both ESLs and RSLs for commercial and/or industrial land use. Only arsenic exceeded the regulatory screening levels. Further evaluation of the reported arsenic concentrations was performed against published DTSC ranges for naturally occurring arsenic in southern California. The evaluation identified that the reported levels of arsenic in site soils fall within the estimated range for naturally occurring arsenic in this region.

The primary maximum allowable contamination level (MCL) for MTBE in a potential beneficial use aquifer in California is 13 ug/L (CCR, Title 22). Groundwater concentrations identified in samples B6 and SB-10 exceed this MCL. Delineation of the lateral extent of these low-level MTBE impacts was achieved with the April 2012 site investigation activities. The sampling results reveal a small, low concentration area of MTBE impacts in the northwestern portion of the site (Figure 3). The total MTBE mass that exceeds the primary MCL of 13 ug/L in this small dissolved-phase plume is estimated to be approximately 0.04 lbs.

Low-level impacts of PCE were reported in the groundwater samples collected during the boring installation events. PCE impacts ranged between 2.2 and 15 ug/L, just above the laboratory reporting limit (and MCL) of 5.0 ug/L. Additional research and assessment of PCE impacts at other sites in the near vicinity was performed. The research revealed that PCE is present at similar concentrations in groundwater at multiple facilities in this area suggesting more of a regional problem rather than an association with this site's current or former operations.

Groundwater samples SB-7 and SB-8 were analyzed for PCBs, and no PCB congeners were reported above laboratory reporting limits.

Groundwater impacts of seven CAM Metals exceed MCLs at the site. Concentrations reported in groundwater beneath the site are consistent with concentrations observed in groundwater samples collected by similar protocols at nearby facilities (BBC 2011, a, c). Groundwater sampling using direct-push technologies (DPT) is known to negatively bias (bias high) sampling analytical results, especially for metals in a highly turbid groundwater environment (EPA 2005). The groundwater samples collected during this event were known to be turbid as visible sediments were observed in the sampling containers. As such, the potential for artificially high total metals results in groundwater exists in this data set.

10.0 CONCLUSIONS AND RECOMMENDATIONS

The soil and groundwater investigative activities have helped by identifying both past and present environmental considerations at the subject site. Prior documented TRPH (>C_{23}) impacts to soil were identified to exist along a drainage ditch that ran from northeast to southwest across the subject property. The origin of the contamination was noted to be the adjacent Palomar Ready Mix facility located east of the site. The County of San Diego, DEH case (H20272-003) associated with these findings was closed in August 1991.

Historical aerial photographs clearly show the drainage ditch identified in earlier environmental assessment reports (Appendix E). And comparing the most recent aerial photos to those from 1939 and 1942 suggest the ditch may have been the original path of Reidy Creek prior to the construction of the concrete storm channels in the area.

In April 1991, a remedial excavation was performed. The excavation progressed along the drainage ditch on the site. The excavation is noted to have been approximately 415 feet long, and unevenly dug to a depth not exceeding 4.5 feet below ground surface (bgs). An excavation of that length would have extended to the proximity of soil borings SB-2 and SB-3 installed in November 2010 (Figure 3). And the detection of heavy hydrocarbons reported in soil sample SB-2-5 (1,210 mg/kg) may possibly be residual contamination from the drainage ditch that was not removed during shallow soil excavation activities. Soil sample SB-2-15, collected directly beneath the identified impact at a depth of approximately 15 feet bgs did not contain TPHmo above laboratory reporting limits. This vertical delineation of the shallow soil impact suggests it is limited in nature, and the absence of total petroleum hydrocarbons in groundwater beneath the site supports this line of evidence.

Soil impacts of total petroleum hydrocarbons in the gasoline range were not detected above laboratory reporting limits (3.0 mg/kg) in any of the twelve borings installed as part of the November 2010 assessment. Similarly, only one minor detection of TPH in the diesel range (8.0 mg/kg) was reported in onsite soils. The site is absent of detections for VOC's in soils. And no detections of PCBs in soils were reported.

In groundwater, only four low-level impacts of MTBE were reported from the nineteen groundwater samples analyzed. MTBE detections ranged from 1.1 to 49 ug/L. The only other VOC detected above reporting limits was PCE. All other VOC's in groundwater were below laboratory reporting limits. Delineation of the lateral extent of these low-level MTBE impacts was achieved with the April 2012 site investigation activities. The sampling results reveal a small, low concentration area of MTBE impacts in the northwestern portion of the site (Figure 3). The MTBE mass in groundwater beneath the site that exceeds the primary MCL of 13 ug/L is estimated to be 0.04 lbs.

Low-level PCE detections reported beneath the site are similar in concentration to PCE impacts discovered at other DEH case sites in this area. The impacts appear regionally between approximately 5-35 ug/L. The absence of VOC's in onsite soils suggests that these impacts are associated with the regional, offsite impacts to groundwater reported in the area and have no specific relation to this site's operations.

BBC assessment activities have identified that low-level, non-hazardous concentrations of naturally occurring metals in shallow site soils do exist at the site. Comparative evaluations of reported metals concentrations with both State and Federal environmental screening levels indicate that site soils do not appear to present a threat to human health or the environment above recognized risk thresholds.

As a result of these naturally occurring metals in soils, metals concentrations in groundwater are also present. Seven different metals exceeded MCLs, however, sampling results appear biased by the turbid, sediment laden sample aliquots that were collected. Sampling results for metals in groundwater were similar in concentration to those observed at nearby facilities that had been collected under similar protocols. The metals concentrations observed in groundwater beneath the subject site appear to be a result of the naturally occurring metals in site soils.

Finally, this characterization effort was performed in an effort to assess any potential environmental considerations that may exist in advance of redevelopment activities. It is not known when site redevelopment activities may take place at the subject site. The site is anticipated to remain a materials and aggregate storage yard and to continue to be used as a heavy equipment training grounds until the City of Escondido identifies a viable development project.

Based upon these results BBC Environmental, Inc. (BBC) recommends that the small area of soils impacted with TRPH observed in the vicinity of soil boring SB-2 and known historically to exist along the location of the former drainage ditch be documented by this report. No further action is recommended at this time. However, future site activities that may include shallow grading in the area of SB-2 or along the former drainage ditch should be performed in accordance with DEH directives regarding the handling of soils impacted by TRPH.

The low-level MTBE impacts reported beneath the site appear limited to the northwestern portion of site and are fully delineated. No onsite soil source area has been detected, and MTBE oxygenated fuels are no longer distributed in California. Calculations for the estimated mass of MTBE in the dissolved-phase plume that exceeds the primary MCL of 13 ug/L were performed, and the estimated MTBE mass was calculated to be approximately 0.018 kilograms (kg). This is the equivalent of approximately 0.04 pounds (lbs.) of MTBE. As such, no further action with regards to the MTBE impacts in groundwater beneath the site are recommended.

Lastly, no further assessment with respects to TPHg, TPHd, VOC's, and PCBs at the site appears warranted at this time.

11.0 REPORT CLOSURE

The work herein has been conducted based on current scientific principles. These site evaluation results depend directly on that information and the testing documented herein. BBC Environmental, Inc. makes no warranties or guarantees as to the accuracy or completeness of information provided or compiled by others. It is possible that information exists beyond that which was not reviewed and/or produced under the contracted scope of this investigation. Additional information which was not found, provided, or available, as well as changes or corrections to site data may alter interpretations herein, and if such changes are manifest, it is recommended that these evaluations be updated accordingly. Hydrogeologic and in situ chemical evaluations have some level of inherent uncertainty in that molecular scale processes are represented by a macroscopic continuum, and results should be viewed accordingly. Similarly, the discrete distributions and effects of geologic heterogeneity at most sites are unknown. Evaluations have been conducted in accordance with scientific principles and the professional standards of the State of California and other states with reciprocal professional standards. No other warranty, express or implied, is provided.

Notes: [1] samples were analyzed for Total Petroleum Hydrocarbons as Gasoline (C6-C10) by EPA method 8015B. [2] samples were analyzed for Total Extractable Petroleum Hydrocarbons by EPA method 8015B for Diesel (C10-C22) and Motor Oil (C22-C36). [3] samples were analyzed for the full list of Volitile Organic Compounds by EPA method 8260B. VOCs not list in this table were not detected above the laboratory reporting limits. SB-7 and SB-8 were analyzed for PCBs by EPA method 8082. All PCB congeners analyzed reported below the laboratory reporting limits. VOCs Abbreviations: MTBE = Methyl tert-Butyl Ether, DIPE = Di-isopropyl Ether, ETBE = Ethyl tert-Butyl Ether, TAME = tert-Amyl Methyl Ether, TBA = tert-Butyl Alcohol, PCE = Tetrachloroethene, mg/Kg = milligrams per kilogram, feet = approximate feet below ground surface, -- = Not measured, NA = not applicable. Reporting Limits are presented with a dilution factor of 1. Please refer to the lab report for dilution factors for each individual sample analyzed.
β = Sample SB-10-5 was reported to contain 38 mg/kg of TPH in the C6-C10 range when analyzed by TEPH Fingerprint analysis.

Notes: [1] samples were analyzed for Total Petroleum Hydrocarbons as Gasoline (C6-C10) by EPA method 8015B;α denotes (C5-C11). [2] samples were analyzed for Total Extractable Petroleum Hydrocarbons by EPA method 8015B for Diesel (C10-C22); β denotes (C12-C24). [3] samples were analyzed for Total Extractable Petroleum Hydrocarbons by EPA Method 8015B for Motor Oil (C22-C36); ϕ denotes (C25-C36). [4] samples were analyzed for the full list of Volitile Organic Compounds by EPA method 8260B. VOCs not list in this table were not detected above the laboratory reporting limits. SB-7 and SB-8 were analyzed for PCBs by EPA method 8082. All PCB congeners analyzed reported below the laboratory reporting limits. VOCs Abbreviations: MTBE = Methyl tert-Butyl Ether, DIPE = Di-isopropyl Ether, ETBE = Ethyl tert-Butyl Ether, TAME = tert-Amyl Methyl Ether, TBA = tert-Butyl Alcohol, PCE = Tetrachloroethene, µg/L = micrograms per liter, feet = approximate feet below ground surface, -- = Not measured, NA = not applicable. Reporting Limits are presented with a dilution factor of 1. Please refer to the lab report for dilution factors for each individual sample analyzed. MCL=maximum contaminant level as listed under CCR Title 22, Table 64444-A. λ = California Drinking Water Action Level as determined by California Department of Public Health.

A.P.N. #232-090-72-00
EST #NONE

COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH
LAND AND WATER QUALITY DIVISION
MONITORING WELL PROGRAM
SOIL BORING CONSTRUCTION PERMIT

SITE NAME: CITY OF ESCONDIDO PUBLIC WORKS YARD (WESTERN YARD)

SITE ADDRESS: 901 W WASHINGTON AVE, ESCONDIDO, CA 92025

PERMIT FOR: 12 SOIL BORINGS

PERMIT APPROVAL DATE: NOVEMBER 17, 2010

PERMIT EXPIRES ON: MARCH 17, 2011

RESPONSIBLE PARTY: CITY OF ESCONDIDO

PERMIT CONDITIONS:

1. All borings must be sealed from the bottom of the boring to the ground surface with an approved sealing material as specified in California Well Standards Bulletin 74-90, Part III, Section 19.D. **Drill cuttings are not an acceptable fill material.**

2. All borings must be properly destroyed within 24 hours of drilling.

3. Placement of any sealing material at a depth greater than 30 feet must be done using the tremie method.

4. All water and soil resulting from the activities covered by this permit must be managed, stored and disposed of as specified in the SAM Manual in Section 5, II, E- 4. (**http://www.sdcounty.ca.gov/deh/lwq/sam/manual_guidelines.html**). In addition, drill cuttings must be properly handled and disposed in compliance with the Stormwater Best Management Practices of the local jurisdiction.

5. Within 60 days of completing work, submit a well construction report, including all well and/or boring logs and laboratory data to the Well Permit Desk. This report must include all items required by the SAM Manual, Section 5, Pages 6 & 7.

6. This office must be given 48-hour notice of any drilling activity on this site and advanced notification of drilling cancellation. Please contact the Well Permit Desk at 619) 338-2339.

NOTE: **This permit does not constitute approval of a work plan as defined in Section 2722 of Article 11 of C.C.R., Title 23. Work plans are required for all unauthorized release investigations in San Diego County.**

G. FEES (in effect beginning July 1, 2011, through June 30, 2012)

ACTIVITY	FEE SCHEDULE	AMOUNT
Permit for Well Installations Only (Groundwater Monitoring Wells, Vadose, Vapor Extraction Wells)	$200.00 for the first monitoring well ……	**$200.00**
Permit for Well Maintenance Inspection (Valid for three years)	$99.00 for first well maintenance inspection	**$99.00**
Each Additional New Well	$161.00 for each additional well installation	___ **x** **$161.00** **$**_____
	$ 30.00 for each additional well maintenance inspection ……..	___ **x** **$ 30.00** **$**_____

Permit for Borings Only *(CPT's, Hydropunch, Geoprobes, Temporary Well Points, etc.)*	$200.00 for the first boring …… $ 49.00 for each additional boring ……	**1** x **$200.00** **3** x **$ 49.00**	**$200.00** **$147.00**
Permit for Well Destructions Only	$200.00 for the first destruction …… $123.00 for each additional destruction …	___ x **$200.00** ___ x **$123.00**	$_____ $_____
Permit for any Combination of Well Installations, Borings, & Destructions (*except UST backfill permit)*	The first activity will be $200.00 **Additional activities will be as follows:** $161.00 for each additional well $99.00 for first well maintenance inspection $ 30.00 for each additional well maintenance inspection $123.00 for each well destruction $ 49.00 for each additional boring	___ x **$200.00** ___ x **$161.00** ___ x **$ 99.00** ___ x **$ 30.00** ___ x **$123.00** ___ x **$ 49.00**	$_____ $_____ $_____ $_____ $_____ $_____
Permit for Underground Storage Tank Monitoring System in Backfill *(i.e. Enhanced Leak Detection)*	**$320.00** **(Flat Fee)**		$_____
	TOTAL COST OF PERMIT		**$347.00**

H. QUESTIONNAIRE: Please answer all applicable questions completely. For well destructions, complete only #1 below and submit any required supportive documentation.

1. If wells are to be destroyed, provide a description of method of destruction N/A

2. What is the purpose of the well/boring investigation?

   ☐ a. Part of an ongoing site assessment case in which a government regulator is the lead agency. If yes, indicate which government regulator is the lead agency and the case number.

   _____ DEH _____ RWQCB _____ DTSC

   ☒ b. Part of a Phase I investigation for property ownership transfer or: Land Owner Due Diligence

   ☐ c. Geotechnical investigation for proposed construction, land stabilization or:

   ☐ d. Other: _____

3. What procedures will be used to prevent the well/boring from providing an avenue to contamination during construction? Borings shall be backfilled using a bentonite grout seal with a concrete (or material to match existing) seal above. Borings shall be backfilled immediately after sample collection is completed.

4. What field procedures will be utilized to determine if contamination exists? Soil sampling will be conducted at ~5 feet bgs and at the depth of first encountered groundwater. Each of the borings will have a groundwater sample collected using a bailer deployed through a temporary piezometer installed within the bore hole.

5. What procedures will be used to determine whether samples will be sent for laboratory testing or archiving? Field monitoring for volatile organic vapors will be conducted using a PID on each of the collected soil samples. A field determination will be made following each boring installation as to how many of the collected samples will be run.

6. What constituents will be monitored and tested (Include EPA Laboratory Test Methods to be used)? Groundwater samples will be analyzed for TPH by EPA Method 8015M and MTBE by EPA Method 8260B; Select soil samples will also be analyzed for TPH by EPA Method 8015M and VOCs by 8260B.

7. How will samples be transported and preserved? Samples will be transported under Chain-of-Custody protocols to the laboratory. Samples will be kept chilled to ~4-degrees celcius until received by the laboratory.

8. What sampling methods will be used? Soil samples will be collected using direct-push soil sampling methodologies and groundwater samples will be collected using a bailer deployed through a temporary piezometer installed in each of the bore holes.

9. Are you proposing a variation from the methods and/or procedures presented in the requirements for the construction or destruction of Vadose and Groundwater Monitoring Wells (Current SAM Manual Requirements)? If yes, specify these variations and include a well construction diagram and all required supporting documentation. Refer to the SAM Manual Appendix B for monitoring well guidelines (www.sdcdeh.org). Yes ☐ No ☒ _____

10. Are you proposing a variation in drilling and destruction of soil borings from the methods and/or procedures specified in the current SAM manual? If yes, specify these variations and include a destruction diagram. Yes ☐ No ☒ _____

11. What procedures will be used to ensure that the drilling equipment will introduce no contamination? Decontamination procedures in accordance with the current SAM Manual guidelines will be conducted on all utilized field sampling equipment prior to the initial direct-push, and following retrieval of the direct-push equipment.

12. What methods will be used to clean sampling equipment? Sampling equipment will be first brushed and/or pressure washed with a detergent and water mix (Liquinox/Alconox or like), followed by two subsequent clean water rinses.

13. What cleaning method will be used to clean casing and screen prior to installation? Sampling sleeves, casing, screen, and sampling materials utilized in the direct-push method and during installation of the temporary piezometer shall be virgin material packed from the manufacturer and will not require cleaning prior to installation.

14. A Property Owner Consent (POC) agreement is required for all applications, except for onsite, open LOP/SAM site assessment cases, Caltrans properties and military properties.

PROPERTY OWNER CONSENT

Proposed locations for subsurface work:

Property Address:

901 W. Washington Avenue

Escondido, CA 92025

Assessor's Parcel Number (APN):

232-090-72-00

I, City of Escondido, owner of the property/properties listed above, give my permission to BBC Environmental, Inc. (consulting company, contractor) to conduct the following work at the locations stated above.

☐ Install _____ monitoring wells ☐ Destroy _____ monitoring wells ☒ Drill 4 soil borings

I understand that Mr. Gerry Shiller (registered professional) of BBC Envirionmental, Inc. (consulting company) and an authorized signer for H&P Mobile GeoChemistry (drilling company) have submitted a signed application to the Department of Environmental Health in which they have agreed to complete the above-stated work according the requirements of the current SAM Manual, all ordinances and laws of the County of San Diego and the State of California pertaining to well/boring construction and destruction. I have arranged with the Responsible Party, the person who causes to have monitoring wells/borings installed or existing wells destroyed on this property, to ensure proper closure of the monitoring wells/borings.

Dear Mr. Johnson:

RE: ESCONDIDO CORPORATE YARD EXPANSION PROJECT
475 N. SPRUCE STREET, ESCONDIDO, CA
HMMD H75 CASE H20272-003, APN 232-090-02, 03, 40, 44, 64, 65

The site remediation information submitted to this agency by Nachant Environmental Incorporated, summarizing the site characterization and mitigation activities at the above referenced location has been reviewed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is the position of this office that no further action is required at this time.

This information has also been discussed with staff of the Regional Water Quality Control Board (RWQCB). Based on the information submitted and current requirements, the RWQCB concurs with the determination of this agency that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

Thank you for your efforts in resolving this matter. Please contact Fred Allee of the Hazardous Materials Management Division at (619) 338-2470, if you require additional assistance.

Sincerely,

GARY R. STEPHANY, Deputy Director
Environmental Health Services

STOCKPILED SOILS REMAINING ON SITE: No

OPEN EXCAVATION(s) REMAINING ON SITE: Area excavated during remedial activities is an un-lined drainage ditch which remains open to supply site drainage. Diesel impacted soils removed from the ditch were disposed of to Sycamore. No other areas on the site were excavated.

COMMENTS

This case came to HMMD attention through the H75 process and did not involve an UST system. The source of the hydrocarbons discovered within the ditch soils at the site was initially unknown, therefore the consultant assumed the worst case (waste oil) and analyzed early soil samples accordingly. Eventually it was determined that the hydrocarbons originated from truck washing activities conducted at the facility to the east of the site (Palomar Transit Mix Inc.) and that the hydrocarbons were predominantly diesel. Screening conducted for all other chemical compounds (refer to analytical section above) showed levels below the detection limits of the various analysis methods used.

1.0 Vehicle

1.1 Discussion

The *STRATAPROBE*™ is a rugged, lightweight hydraulic drive point system designed to perform sampling and monitoring services specific to the environmental industry. The carrier vehicle is a four wheel drive, one ton pickup truck with a reliable power take-off hydraulic system. One of the most versatile systems of its kind the *STRATAPROBE* can drive an assortment of sampling devices fifty to sixty feet in many soil formations.

The direct push hydraulic unit consists of a rear-mounted, dual ram configuration mounted in conjunction with a vibrating component that is capable of producing high-frequency impact energy. A 5,000 pound static reaction weight and 15,000 pound pullback capacity provide ample force to overcome most common geologic conditions. The low profile mast is twelve feet high when fully extended and the framework of the machine is boom articulated to allow for a full range of positioning.

The *STRATAPROBE*'s low profile and articulated boom provide for easy access when sampling under canopies, adjacent to structures and inside buildings. A Geoprobe 540MT limited access rig and/or hand held portable equipment are also available where truck access is not possible.

1.2 Operation

The STRATAPROBE is operated from a station at the rear of a 1-ton pickup truck. The probing unit is hydraulically powered via a power takeoff pump mounted directly to the truck's transmission. Positioning, pushing, and retracting of the probe and hammer is controlled by two separate hydraulic control manifolds located at the operating station. Each manifold consists of four to six spring-return to neutral control valves. The spring return feature provides a safety function, which stops all probing and positioning action if the operator releases the valve.

1.3 Emergency Operation

In the event of any emergency such as fire or hydraulic system failure all power to the probing unit and vehicle can be secured by turning off the vehicle ignition key along with an emergency shut off switch which is located at the rear of the truck within reach of the operator. A fire extinguisher is carried in the truck cab for emergency use. Under no circumstances should the truck or probe be operated in other than its normal configuration.

2.0 Soil Sampling Procedures

2.1 Discussion

Soil samples may be obtained by using either two primary soil samplers depending on the amount of sample needed. A 1.5-inch OD x 24-inch split-spoon sampler can be used to collect soil samples in a 1.0-inch x 24-inch acetate liner. A 2.125-inch OD x 48-inch macro-core sampler can be used to collect soil samples in a 1.5-inch x 48-inch acetate liner. Macro-core samplers are also available in 24-inch lengths.

The samplers are threaded onto the leading edge of *STRATAPROBE* 1.5-inch O.D. probe rod and advanced to depth using the *STRATAPROBE* direct push system. The probe rods are nominally 4-feet in length and additional rods are connected to reach the desired depth. There are two primary sampling methods which can be achieved with either the spit-spoon sampler or the macro-core sampler.

Discrete/Closed Piston Soil Sampling

A piston point is held inside the cutting shoe by a piston rod. The piston rod extends up through the sampler into the drive head. A stop-pin threaded into the drive head holds the piston rod in place thus holding the piston point in place. Once the sampler has been advanced to the top of the sampling interval, the stop-pin is released via extension rods and retracted. The sampler is then advanced through the sampling interval. As soil enters the sampler, the piston point and piston rod are displaced upward into the sample tube. The sampler is then retracted from the probe hole and disassembled. The sleeve is removed from the sampler at which point the sample can be cut to desired length, capped with Teflon squares and end caps and sent to the laboratory for analysis.

Continuous Core Sampling

It is recommend that the 48-inch macro-core sampler be used for continuous core sampling because of the extended sample lengths, but a 24-inch split-spoon or 24-inch macro-core sampler may also be used. Continuous coring starts at the ground surface with an open-ended sampler. The sampler is driven through the soil for the length of the sampler, and then retracted and the sample removed. In stable soils, the open-tube sampler is inserted back down the same hole to obtain the next core from the next sample interval. In unstable soils, the sampler can be equipped with the closed piston sampling equipment to assure the sample is collected from the correct sample interval along the continuous core.

Sampling rates vary from 100' to 200' per day depending on soil conditions. Use of the coring tube provides for observation of subsurface conditions. The coring tube can also be used to create an open bore hole for inserting water or vapor monitoring well points.

3.0 Groundwater Sampling Procedures

STRATAPROBE provides high quality groundwater sampling using one of the following techniques:

3.1 HYDROPUNCH II™ - TYPE GROUNDWATER SAMPLING

Groundwater samples are obtained using a Hydropunch II™ - type of sampler. The sampler is a 48" x 1.75" diameter stainless steel tube containing a retracted and shielded stainless steel well screen with a drop-off expendable point. The sampler is threaded onto a 1.5" O.D. heavy duty probe rod and advanced directly into the aquifer in the shielded position with the STRATAPROBE direct push system.

When the desired depth is reached, the probe rod is retracted approximately 48". The expendable point drops off and the stainless steel sample screen is exposed. Groundwater flows past the screen and into the void space of the sampler. Samples are then obtained using either a 1/2" O.D. (minimum) bailer or using a peristaltic pump and inert tubing.

3.2 SAMPLING POINT GROUNDWATER SAMPLING

Groundwater samples are obtained using a sample point consisting of a 36" x 1/2" diameter slotted teflon well screen connected to the surface via 3/8" diameter inert nylaflow tubing. The sampler is inserted by first driving a 1.5" O.D. heavy duty probe rod, point holder and expendable point with an o-ring seal directly into the aquifer. When the desired depth is reached, a short section of the slotted well screen attached to an inert nylaflow or clear plastic tubing is lowered to the bottom of the drive rod. The drive rod and point holder are then withdrawn, the expendable point drops off and the well screen is exposed to the aquifer.

Groundwater flows past the screen and into the void space of the sampler. Groundwater samples are then obtained using either a bailer or peristaltic pump connected to polyethylene tubing.

3.3 MINI-WELL GROUNDWATER SAMPLING

A temporary mini-well can be installed by driving the *STRATAPROBE* 2.0" O.D. casing rod with an expendable stainless steel point to the desired depth within the water table aquifer. ¾" or 1" I.D. pvc mini-well is then installed in the casing. Once the desired length of pvc screen and riser is placed into the cased hole, the casing rod is retracted exposing the pvc. Groundwater flows past the screen and into the void space of the pvc. Samples are then obtained using either a 0.70" O.D. (minimum) disposable or stainless steel bailer or by using a peristaltic pump and inert tubing.

Semi-permanent groundwater wells can also be installed using the above procedures and providing a sandpack around and 2' above the pvc screen and a bentonite seal to the surface. Traffic well boxes can also be installed for protection of the well.

4.0 Soil Vapor Sampling Procedures

4.1 Discussion

Soil vapor samples are obtained by using a 1.5-inch O.D. PRT (post run tubing) point holder and a hardened drop-off steel point. The point holder is threaded onto the leading edge of 1.5-inch O.D. probe rod and advanced to depth using the *STRATAPROBE* direct push system. The probe rods are nominally 4-feet in length and additional rods are connected to reach the desired depth.

Once inserted to the desired depth, the probe rod is retracted slightly to expose the vapor sampling port. A 3/8" PRT fitting connected to 1/8" (or ¼" if requested) nylaflow tubing is inserted into the rod and connected to the point holder by spinning the tubing and threading the pieces together. A small rubber o-ring on the PRT insures an airtight seal.

Soil vapor can then withdrawn from the inert nylaflow tubing using a 60 cubic centimeter (cc) syringe connected via a three-way valve. The proper assigned purge volume is first withdrawn from the tubing and flushed out using the three-way valve. The next 60 cc of gas are withdrawn in the syringe, plugged, and immediately transferred to a mobile lab for analysis within minutes of collection. The use of small calibrated syringes allows for careful monitoring of purge and sample volumes. This procedure ensures adequate sample flow is obtained without excessive pumping of air or introduction of surface air into the sample.

After a sample is obtained, the sample tubing is removed from the probe and disposed of. This design prevents clogging of the sampling port and cross-contamination from soils during insertion.

4.2 Soil Vapor Implants / Monitoring Mini-Wells

At each vapor monitoring probe location, H&P's truck-mounted hydraulic probe may be used to advance interconnected 4 ft lengths of 1.5" steel rod to the required depth. The rod is then removed and 1/8" nylaflow tubing with a small airstone filter is inserted into the open borehole. Based on the borehole volume, 6" to 1' of sandpack are poured down the borehole to encase the filter. Approximately 1' of granular bentonite is then poured down the borehole and hydrated to seal the probe. The well can then be completed to the surface with hydrated bentonite or additional implants may be place in the boring at desired depths as it is built to the surface. Refer to Exhibit A for diagram. In unstable soil conditions, the implant and materials can be inserted into the probe rod as it is retracted.

The top of the line may be terminated by various methods. Generally, the top is terminated and plugged using a 2-way valve. This allows a variety of devices to be connected later if needed. Swagelok fittings and/or pressure valves are also available for connection to pressure monitoring equipment.

These vapor implants can be semi-permanent and protected with well boxes for future sampling events.

5.0 Decontamination Procedures

5.1 Discussion

Decontamination procedures are selected based on soil conditions, type and degree of contamination, and type of sampler used. In all cases, drive rods and samplers are wiped free of loose dirt and foreign material.

Soil and groundwater samplers, and rods if necessary, are disassembled and put through a three step wash and rinse cycle which includes:

- phosphate-free detergent, brush and de ionized water to remove soil and debris
- rinse with tap water
- rinse with deionized water

Soil vapor sampling rods and external are cleaned of excess dirt and moisture between each location. The probe's internal nylaflow tubing is also flushed with hundreds of cubic centimeters of air between sampling locations. If contamination levels in excess of 100 ug/L-vapor are detected the sample tubing is replaced. Sampling syringes are flushed with clean air after each use.

Additional decontamination procedures including a high temperature, high pressure wash system or the use of specific cleaning compounds may be incorporated at the client's request.

6.0 Miscellaneous

6.1 Field Collection Log

The field technician maintains a log sheet summarizing depth of penetration, refusal, which probe was used on each sampling location, when tubing was replaced, any visual contamination on the probe, and any other unusual occurrences which occurred at a particular sampling location.

6.2 Hole Abandonment

Hole abandonment procedures are based on the geology encountered, the depth of the hole and workplan requirements. Granulated bentonite is normally used to completely fill the probe hole. The bentonite can be hydrated or mixed with cement as a grout if requested.

©H&P Mobile Geochemistry, Inc. 2008

7.0 Health and Safety Practices

7.1 Equipment inspection procedures

Prior to the commencement of work, the following components of the Strataprobe platform should be inspected:

- ◊ Controls - all controls should be clear of obstruction, should be accessible from level ground, and should be free of dirt, water, or any other substance that may inhibit proper use.
- ◊ Hoses and hydraulics - all hoses and hydraulic components should be configured to move freely. All hose "pinch points" should be eliminated. The hydraulic fluid reservoir should be inspected for dirt, water, and the proper fluid level.
- ◊ Derrick / mast - the derrick / mast assembly should be inspected for signs of cracks or stress. It is recommended that the vehicle be grounded via a minimum four foot copper rod in the event of inclement weather.

In addition, the following tools should be inspected:

- ◊ Concrete and asphalt coring equipment / power tools - power cords should be free from cracks and weathering, bits and cutting edges should be sharp and clean.
- ◊ Sample collection equipment - drive pipe should be straight and free of burrs. All samplers should be clean, free of signs of stress, and work freely.
- ◊ Generator - should be properly ventilated, fueled, and have the proper noise abatement equipment installed.

7.2 Personal Protection Equipment (PPE)

The nature of Strataprobe work normally requires the use of varying levels of PPE, which includes but is not limited to:

- ◊ Head protection - hard hat
- ◊ Ear protection - ear muffs or ear plugs
- ◊ Eye protection - safety glasses
- ◊ Hand protection - chemical resistant gloves
- ◊ Foot protection - ANSI approved safety footwear
- ◊ Body protection - TYVEK suits, splash aprons, etc.
- ◊ Respiratory protection - full face air-purifying respirators.

7.3 Emergency Response

The nature of the Strataprobe sampling platform presents various operating hazards. It is primarily a hydraulically operated system. The possibility of leaks, over heating, fire, and personal injury do exist.

In the event of a hydraulic leak:

- ◊ Disengage the PTO (Power Take Off). Turn off the vehicle engine.
- ◊ Contain any spill or contamination of hydraulic fluid.
- ◊ Determine the source of the leak. If it is at a fitting, attempt to stop the leak by tightening or re-seating the fitting. Teflon tape may be employed to create a better seal.
- ◊ If the leak is in a hose itself or some other inaccessible area, the vehicle may need to be serviced by a professional.
- ◊ Assuming the repair is successful, start the vehicle engine, engage the PTO, and test the system. If a leak persists, shut down the operation and call for service.

In the event of overheating:

- ◊ Disengage the PTO. Turn off the vehicle engine.
- ◊ If the overheating is in the hydraulic system itself, check the reservoir fluid level. A lack of fluid may cause the system to overheat.
- ◊ If the overheating is in the hammer, allow the hammer to cool. Excessive use can create extreme heat.
- ◊ If the overheating is in the vehicle engine, allow the engine to cool. Check the cooling system for proper coolant level. Add coolant if necessary. Check the radiator / fan assembly for obstruction. Air must flow freely across the radiator, and the fan must turn freely.

In the event of fire:

- ◊ Access the situation. Is the fire too big or involved to safely extinguish? If the fire is small and localized, use the extinguisher if it is safe to do so. **REMEMBER: most fire extinguishers only work for 5 to 10 seconds**. Will that be enough time to put the fire out?
- ◊ If the fire is not put out or is too involved, call 911.
- ◊ Don't be a hero. Property can be replaced, but lives cannot.

In the event of personal injury:

- ◊ Treat the victim as necessary. Stabilize the individual and seek professional medical assistance. If someone else is available, stay with the individual and send them for help. If it is obvious that the injury is critical and a telephone is available, treat the injury as best as possible and call 911 immediately.

HP Labs Soil Vapor Implants

GENERAL FIELD SAMPLING PROCEDURES
Direct-Push Sampling Technology

Site investigation activities including soil and groundwater sample collection were completed using direct-push equipment. This technology typically uses a lightweight hydraulic drive point system mounted to the rear of a pickup truck. The hydraulically powered probe is advanced through soils by pushing or hammering. The probe rod is approximately 2.0 inches in diameter and utilizes a 1 inch by 24 inch split barrel sampler. The system drives the 2.0 inch casing to within approximately 2 feet of the desired sampling depth. Once the sampler has been advanced to the top of the sampling interval, the stop-pin for the piston point that is located inside the cutting shoe is released and retracted using extension rods. The sampler is then advanced through the sampling interval. As soil enters the sampler, the piston point is displaced upward into the sample tube. The sampler is then retracted from the probe hole and disassembled.

Prior to initiating field direct-push activities a site utility survey and hand clearing of the proposed investigation points was conducted. An independent subsurface utility survey company was retained to perform locating of onsite subsurface utilities and/or to clear the immediate area of proposed investigation points. A subsurface utility survey typically includes but is not limited to visual site inspection, metal detection, conductive electromagnetic induction, and non-conductive ground penetrating radar surveillance. The selection of the appropriate technologies is determined by the utility survey company. In coordination with the onsite utility survey, Underground Service Alert of Southern California was notified and requested to confirm the absence of subsurface utilities. Pursuant to the site utility survey and based upon the survey findings proposed investigation points may be relocated.

Following the location of subsurface utilities and the final selection of proposed investigation points hand clearing of utilities is performed. If necessary, concrete cutting is performed by a qualified subcontractor. The concrete core is removed and hand augering of soils is performed to a minimum depth of 4 feet below ground surface to confirm the absence of utilities at the selected point. The auger used is approximately 3 inches in diameter. Hand augered soils are replaced and compacted into the auger hole to provide rod support during direct-push activities. If need be, sand is added and compacted to bring the proposed point up to surface elevation.

During the investigation, BBC Environmental, Inc is responsible for managing the implementation of the overall job scope and observing field subcontractors during the implementation of their specialty service onsite. Safe operation of subcontractor equipment and safe management of subcontractor employees is the responsibility of the subcontractor.

Soil Sampling

Soil samples are typically collected at five (5) foot intervals, at significant changes in lithology, or as deemed necessary to properly characterize the subsurface strata. Soil samples are withdrawn from the sampler in a 1 inch by 24 inch acetate liner. The acetate liner is removed and Teflon™ squares are placed over each end of the sample and capped. Each sample is labeled with the project number, boring number, sample depth, technician's initials, and date and time of collection. After samples have been labeled the corresponding identifying information is also recorded on the soil sampling

log and/or chain-of-custody. Samples are then transferred to an onsite mobile laboratory for immediate analysis, or placed in a cooler with ice and maintained at a temperature of less than 4 degrees Celsius until their transport to a state-certified laboratory for analysis.

Soil Vapor Screening and Soil Classification

During sampling activities, soil adjacent to the laboratory sample is screened for organic vapors using a photoionization detector (PID). The selected soils are placed in a zip-lock bag, sealed, and manually broken up in an attempt to release potential soil vapors. The PID probe is then inserted into the bag through a small opening in the seal and a reading is taken and recorded on the air monitoring log and/or boring log. Similarly, adjacent soils are removed from the sampler and described in accordance with the Unified Soil Classification System. For each sampling interval, field observations of soil type, color, density/consistency, moisture, and grading are recorded on the boring log.

Groundwater Sampling

Groundwater samples were also collected to address potential hydrocarbon impacts to first encountered groundwater beneath the site and/or in the site vicinity. A minimum of one groundwater sample was collected from each boring within the upper 2 feet of the water table. Depending on field observations, deeper sample(s) may also be collected. Groundwater samples are typically collected using either hydropunch equipment or by advancing temporary piezometer casing through which sampling can occur. Prior to groundwater sampling a field measurement for phase separated hydrocarbons (PSH) is performed using an interface meter capable of detecting PSH at a detection tolerance of 0.01 feet.

Hydropunch equipment obtains groundwater samples by advancing a split barrel tube containing a shielded stainless steel well screen with an expendable point. The sampler is threaded onto the probe rod and advanced directly into the aquifer in the shielded position. At the desired depth, the probe rod is retracted approximately 2 feet causing the expendable tip to drop off and exposing the stainless steel screen. Groundwater flows past the screen and into the void space of the sampler. Samples are obtained using a 0.5 inch diameter bailer.

As an alternative, temporary piezometer casing is advanced through the open bore hole and directly into the aquifer at the desired depth. The temporary piezometer casing consists of solid and screened sections of 1 inch polyvinyl chloride (pvc) pipe. The screened section of the pvc pipe is placed so that the screen interval is partially submerged into groundwater. Groundwater flows past the screen and into the void space of the casing. Samples are then obtained using a 0.5 inch diameter bailer.

All soil and groundwater samples collected during the event were stored in a cooler with ice and kept at a temperature of less than 4 degrees Celsius until delivery to a state-certified laboratory. Sample handling and relinquishment is performed under standard chain-of-custody protocols. Groundwater parameters such as temperature, pH, electrical conductivity, turbidity, oxidation reduction potential, and dissolved oxygen may or may not be collected at the time of sampling depending upon the requirements of the regulatory approved workplan.

Chain-of-Custody Protocol

Chain-of-Custody protocol is followed for all soil and groundwater samples selected for laboratory analysis. The chain-of-custody form accompanies the samples from the sampling locality to the laboratory, providing a continuous record of possession prior to analysis.

Direct-Push Equipment Decontamination Procedures

Prior to its initial use and subsequent to each boring installation the pushrod and direct push equipment will be disassembled and have performed a three step wash and rinse cycle that includes:

- Brushing to remove soil and debris in tap water with an added phosphate–free detergent
- Second rinse with tap water
- Third rinse with distilled water

Boring Abandonment

Boring abandonment is completed using a granulated bentonite pellet/chip that is hydrated to create a slurry grout. The grout is typically emplaced by using the pvc casing or push rods as a tremie in an effort to prevent bridging of the seal material or borehole collapse. The granulated bentonite is poured directly into the boring and hydrated from the total depth of the boring to within approximately 0.5 feet of ground surface. Concrete or a matching surface cover will be placed from approximately 0.5 feet bgs to ground surface to seal the boring.

Waste Stream Identification and Disposal

Generated waste streams from this scope of work are anticipated to be minimal to non-existent. Direct-push sampling is a technology that minimizes waste stream generation such that no soil cuttings are anticipated. Decontamination water and any other waste liquids generated will be removed from the site by the drilling contractor for proper manifested disposal or placed into 1-55 gallon drum that will be sealed, labeled, profiled, and stored onsite until transportation to an appropriate disposal facility is arranged. Transportation and disposal of waste streams is typically conducted within 90 days of the drilling event.

SAMPLE ACCEPTANCE CHECKLIST

Section 1
Client: BBC Env Project: City of Escondido
Date Received: 11-01-10 Sampler's Name: (Yes) No
Sample(s) received in cooler: (Yes) No (Skip Section 2)
Shipping Information: _____

Section 2
Was the cooler packed with: X Ice ___ Ice Packs ___ Bubble Wrap ___ Styrofoam
___ Paper ___ None ___ Other _____
Cooler or box temperature: 4 / 1 C
(Acceptance range is 2 to 6 Deg. C.)

Section 3	YES	NO	N/A
Was a COC received?	X		
Is it properly completed? (IDs, sampling date and time, signature, test)	X		
Were custody seals present?		X	
If Yes – were they intact?			X
Were all samples sealed in plastic bags?	X		
Did all samples arrive intact? If no, indicate below.	X		
Did all bottle labels agree with COC? (ID, dates and times)	X		
Were correct containers used for the tests required?	X		
Was a sufficient amount of sample sent for tests indicated?	X		
Was there headspace in VOA vials?		X	
Were the containers labeled with correct preservatives?	X		
Was total residual chlorine measured (Fish Bioassay samples only)? *			X

*: If the answer is no, please inform Fish Bioassay Dept. immediately.

Section 4
Explanations/Comments

Section 5
Was Project Manager notified of discrepancies: Y / N N/A

Danielle Roberts

From: Walter B. Craig [w.craig@bbcenvironmental.com]

Sent: Thursday, December 09, 2010 9:49 AM

To: 'Danielle Roberts'

Subject: RE: Western Yard

Danielle:

Per our conversation, I saw that the SB-10 groundwater sample came back with MTBE and PCE hits in it (see lr265761). I also saw that the SB10-5 soil sample had some minor hits of TPH as well (see lr265760 (1)). That said, I would like to run the SB10-16 soil sample for VOCs as soon as possible.

I will complete my review this afternoon and let you know if there are any other samples we may want to run.

Thanks, -w.

SAMPLE ACCEPTANCE CHECKLIST

Section 1
Client: BBC Engineering
Date Received: 11-24-10
Sample(s) received in cooler: (Yes) No (Skip Section 2)
Shipping Information: _____
Project: Escondido public work
Sampler's Name: (Yes) No western land

Section 2
Was the cooler packed with: ✓ Ice ___ Ice Packs ___ Bubble Wrap ___ Styrofoam ___ Paper ___ None ___ Other _____
Cooler or box temperature: 3.5 C

(Acceptance range is 2 to 6 Deg. C.)

Section 3	YES	NO	N/A
Was a COC received?	✓		
Is it properly completed? (IDs, sampling date and time, signature, test)	✓		
Were custody seals present?		✓	
If Yes – were they intact?			✓
Were all samples sealed in plastic bags?	✓		
Did all samples arrive intact? If no, indicate below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were correct containers used for the tests required?	✓		
Was a sufficient amount of sample sent for tests indicated?	✓		
Was there headspace in VOA vials?			✓
Were the containers labeled with correct preservatives?			✓
Was total residual chlorine measured (Fish Bioassay samples only)? *			✓

*: If the answer is no, please inform Fish Bioassay Dept. immediately.

Section 4
Explanations/Comments

Section 5
Was Project Manager notified of discrepancies: Y / (N) N/A

LAB REQUEST 265761
REPORTED 12/08/2010
RECEIVED 11/24/2010

PROJECT Escondido Public Works - Western Yard

SUBMITTER Client

COMMENTS

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods as indicated on the report. This cover letter is an integral part of the final report.

Order No.	Client Sample Identification
1127957	Laboratory Method Blank

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

ASSOCIATED LABORATORIES by,

Edward S. Behare, Ph.D.
Vice President

NOTE: Unless notified in writing , all samples will be discarded by appropriate disposal protocol 30 days from date reported.

The reports of the Associated Laboratories are confidential property of our clients and may not be reproduced or used for publication in part or in full without our written permission. This is for the mutual protection of the public, our clients, and ourselves.

Client: BBC
Project: escondido Public work-western
Date Received: 11-24-10
Sampler's Name: Yes No Yard
Sample(s) received in cooler: ~~Yes~~
No (Skip Section 2)
Shipping Information:

Section 2
Was the cooler packed with: 4 Ice ____ Ice Packs ___ Bubble Wrap ___ Styrofoam
____ Paper ____None ___ Other_____
~~Cooler~~ or box temperature: 3.0

(Acceptance range is 2 to 6 Deg. C.)

Section 3	YES	NO	N/A
Was a COC received?	✓		
Is it properly completed? (IDs, sampling date and time, signature, test)	✓		
Were custody seals present?		✓	
If Yes – were they intact?			✓
Were all samples sealed in plastic bags?	✓		
Did all samples arrive intact? If no, indicate below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were correct containers used for the tests required?	✓		
Was a sufficient amount of sample sent for tests indicated?	✓		
Was there headspace in VOA vials?		✓	
Were the containers labeled with correct preservatives?	✓		
Was total residual chlorine measured (Fish Bioassay samples only)? *			✓

*: If the answer is no, please inform Fish Bioassay Dept. immediately.

H&P Project: BBC042512-L4
Client Project: Escondido Wyard.2 / 901 N. Washington

Dear Mr. Walter Craig:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 25-Apr-12 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis Villarreal

Notes and Definitions

QR-02	The RPD result exceeded the QC control limits. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS
Certificate# 2742, 2745, & 2741 approved for LUFT
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A
Hexachlorobutadiene by EPA TO-15 & TO-14A
1,2,4-Trimethylbenzene by EPA TO -14A
1,2-Dichlorobenzene by EPA TO-15 & TO-14A
1,3,5-Trimethylbenzene by EPA TO -14A
1,4-Dichlorobenzene by EPA TO-15 & TO-14A
Benzene by EPA TO-15 & TO-14A
Chlorobenzene by EPA TO-15 & TO-14A
Ethyl benzene by EPA TO-15 & TO-14A
Styrene by EPA TO-15 & TO-14A
Toluene by EPA TO-15 & TO-14A
Total Xylenes by EPA TO-15 & TO-14A
1,1,1-Trichloroethane by EPA TO-15 & TO-14A
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A
1,1,2-Trichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethene by EPA TO-15 & TO-14A
1,2-Dichloroethane by EPA TO-15 & TO-14A
1,2-Dichloropropane by EPA TO-15 & TO-14A
Benzyl Chloride by EPA TO-15 & TO-14A
Bromoform by EPA TO-15
Bromomethane by EPA TO-15 & TO-14A
Carbon tetrachloride by EPA TO-15 & TO-14A
Chloroethane by EPA TO-15
Chloroform by EPA TO-15 & TO-14A
Chloromethane by EPA TO-15 & TO-14A
cis-1,2-Dichloroethene by EPA TO-15
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A
Methylene chloride by EPA TO -15 & TO-14A
Tetrachloroethane by EPA TO-15 & TO-14A
trans-1,2-Dichloroethene by EPA TO-15
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A
Trichloroethene by EPA TO-15 & TO-14A
Vinyl chloride by EPA TO -15 & TO-14A
2-Butanone by EPA TO-15
4-Methyl-2-Pentanone by EPA TO-15
Hexane by EPA TO-15
Methyl tert-butyl ether by EPA TO-15
Vinyl acetate by EPA TO-15

Dibromochloromethane by EPA TO-15
Dichlorodifluoromethane by EPA TO-15 & TO-14A
Trichlorofluoromethane by EPA TO-15 & TO-14A
Naphthalene by EPA TO-15 & TO-14A
m&p Xylenes by EPA TO-15
o-Xylene by EPA TO-15
1,3-Butadiene by EPA TO-15
1,1,2-Trichlorotrifluoroethane by EPA TO-15 & TO-14A
Carbon disulfide by EPA TO-15
1,4-Dioxane by EPA TO-15
Cyclohexane by EPA TO-15
tert-Butyl Alcohol by EPA TO-15
1,3-Dichlorobenzene by EPA TO-15 & TO-14A
Heptane by EPA TO-15
Bromodichloromethane by EPA TO-15 & TO-14A

This certification applies to samples analyzed in summa canisters.

Environmental Screening Levels
MCLs
Mass Calculations

Article 5.5. Primary Standards -- Organic Chemicals

§64444. Maximum Contaminant Levels – Organic Chemicals.

The MCLs for the primary drinking water chemicals shown in Table 64444-A shall not be exceeded in the water supplied to the public.

Table 64444-A
Maximum Contaminant Levels
Organic Chemicals

Chemical	*Maximum Contaminant Level, mg/L*
(a) Volatile Organic Chemicals (VOCs)	
Benzene	0.001
Carbon Tetrachloride	0.0005
1,2-Dichlorobenzene	0.6
1,4-Dichlorobenzene	0.005
1,1-Dichloroethane	0.005
1,2-Dichloroethane	0.0005
1,1-Dichloroethylene	0.006
cis-1,2-Dichloroethylene	0.006
trans-1,2-Dichloroethylene	0.01
Dichloromethane	0.005
1,2-Dichloropropane	0.005
1,3-Dichloropropene	0.0005
Ethylbenzene	0.3
Methyl-*tert*-butyl ether	0.013
Monochlorobenzene	0.07
Styrene	0.1
1,1,2,2-Tetrachloroethane	0.001
Tetrachloroethylene	0.005
Toluene	0.15
1,2,4-Trichlorobenzene	0.005
1,1,1-Trichloroethane	0.200
1,1,2-Trichloroethane	0.005
Trichloroethylene	0.005
Trichlorofluoromethane	0.15
1,1,2-Trichloro-1,2,2-Trifluoroethane	1.2
Vinyl Chloride	0.0005
Xylenes	1.750*

Table 64444-A (continued)
Maximum Contaminant Levels
Organic Chemicals

Chemical	*Maximum Contaminant Level, mg/L*
(b) Non-Volatile Synthetic Organic Chemicals (SOCs)	
Alachlor	0.002
Atrazine	0.001
Bentazon	0.018
Benzo(a)pyrene	0.0002
Carbofuran	0.018
Chlordane	0.0001
2,4-D	0.07
Dalapon	0.2

Di(2-ethylhexyl)adipate	0.4
Di(2-ethylhexyl)phthalate	0.004
Dinoseb	0.007
Diquat	0.02
Endothall	0.1
Endrin	0.002
Ethylene Dibromide	0.00005
Glyphosate	0.7
Heptachlor	0.00001
Heptachlor Epoxide	0.00001
Hexachlorobenzene	0.001
Hexachlorocyclopentadiene	0.05
Lindane	0.0002
Methoxychlor	0.03
Molinate	0.02
Oxamyl	0.05
Pentachlorophenol	0.001
Picloram	0.5
Polychlorinated Biphenyls	0.0005
Simazine	0.004
Thiobencarb	0.07
Toxaphene	0.003
2,3,7,8-TCDD (Dioxin)	3×10^{-8}
2,4,5-TP (Silvex)	0.05

*MCL is for either a single isomer or the sum of the isomers.

surveys shall be repeated every five years.

Article 4. Primary Standards--Inorganic Chemicals

§64431. Maximum Contaminant Levels--Inorganic Chemicals.

(a) Public water systems shall comply with the primary MCLs in Table 64431-A as specified in this article.

Table 64431-A
Maximum Contaminant Levels
Inorganic Chemicals

Chemical	*Maximum Contaminant Level, mg/L*
Aluminum	1.
Antimony	0.006
Arsenic	0.010
Asbestos	7 MFL*
Barium	1.
Beryllium	0.004
Cadmium	0.005
Chromium	0.05
Cyanide	0.15
Fluoride	2.0
Mercury	0.002
Nickel	0.1
Nitrate (as NO3)	45.
Nitrate+Nitrite (sum as nitrogen)	10.
Nitrite (as nitrogen)	1.
Perchlorate	0.006
Selenium	0.05
Thallium	0.002

* MFL=million fibers per liter; MCL for fibers exceeding 10 um in length.

§64432. Monitoring and Compliance--Inorganic Chemicals.

(a) All public water systems shall monitor to determine compliance with the nitrate and nitrite MCLs in Table 64431-A, pursuant to subsections (c) through (e) and §64432.1. All community and nontransient-noncommunity water systems shall monitor to determine compliance with the perchlorate MCL, pursuant to subsections[18] (c), (d), (j), and Section 64432.3. All community and nontransient-noncommunity water systems shall also monitor to determine compliance with the other MCLs in Table 64431-A, pursuant to subsections (b) through (n) and, for asbestos, Section 64432.2. Monitoring shall be conducted in the year

[18] "(c), (d), (j)" should be "(d), (e), (l)" and will be corrected as such at a later date.

Table II - List of Inorganic Persistent and Bioaccumulative Toxic Substances and Their Soluble Threshold Limit Concentration:

(STLC) and Total Threshold Limit Concentration (TTLC) Values.

Substance [a,b]	STLC mg/l	TTLC Wet-Weight mg/kg
Antimony and/or antimony compounds	15	500
Arsenic and/or arsenic compounds	5.0	500
Asbestos		1.0 (as percent)
Barium and/or barium compounds (excluding barite)	100	10,000[c]
Beryllium and/or beryllium compounds	0.75	75
Cadmium and/or cadmium compounds	1.0	100
Chromium (VI) compounds	5	500
Chromium and/or chromium (III) compounds	5[d]	2,500
Cobalt and/or cobalt compounds	80	8,000
Copper and/or copper compounds	25	2,500
Fluoride salts	180	18,000
Lead and/or lead compounds	5.0	1,000
Mercury and/or mercury compounds	0.2	20
Molybdenum and/or molybdenum compounds	350	3,500[e]
Nickel and/or nickel compounds	20	2,000
Selenium and/or selenium compounds	1.0	100
Silver and/or silver compounds	5	500
Thallium and/or thallium compounds	7.0	700
Vanadium and/or vanadium compounds	24	2,400
Zinc and/or zinc compounds	250	5,000

[a]STLC and TTLC values are calculated on the concentrations of the elements, not the compounds.

[b]In the case of asbestos and elemental metals, the specified concentration limits apply only if the substances are in a friable, powdered or finely divided state. Asbestos includes chrysotile, amosite, crocidolite, tremolite, anthophyllite, and actinolite.

[c]Excluding barium sulfate.

[d]If the soluble chromium, as determined by the TCLP set forth in Appendix I of chapter 18 of this division, is less than 5 mg/l, and the soluble chromium, as determined by the procedures set forth in Appendix II of chapter 11, equals or exceeds 560 mg/l and the waste is not otherwise identified as a RCRA hazardous waste pursuant to section 66261.100, then the waste is a non-RCRA hazardous waste.

[e]Excluding molybdenum disulfide.

DISCLAIMER

This document, *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater* (September 2007), is a technical report prepared by staff of the California Regional Water Quality Board, Bay Area Region (Board staff). This document is not intended to establish policy or regulation. The Environmental Screening Levels presented in this document and the accompanying text are specifically not intended to serve as: 1) a stand-alone decision making tool, 2) guidance for the preparation of baseline environmental assessments, 3) a rule to determine if a waste is hazardous under the state or federal regulations, or 4) a rule to determine when the release of hazardous chemicals must be reported to the overseeing regulatory agency.

The information presented in this document is not final Board action. Board staff reserve the right to change this information at any time without public notice. This document is not intended, nor can it be relied upon, to create any rights enforceable by any party in litigation in the State of California. Staff in overseeing regulatory agencies may decide to follow the information provided herein or act at a variance with the information, based on an analysis of site-specific circumstances.

This document will be periodically updated as needed. Please send comments, edits, etc. in writing to the above contacts. Board staff overseeing work at a specific site should be contacted prior to use of this document in order to ensure that the document is applicable to the site and that the user has the most up-to-date version available. This document is not copyrighted. Copies may be freely made and distributed. Reference to the screening levels presented in this document without adequate review of the accompanying narrative could result in misinterpretation and misuse of the information.

Table of Contents

EXECUTIVE SUMMARY **ES-1**

1 INTRODUCTION **1-1**

1.1 Tiered Approach to Environmental Risk Assessments 1-1
1.2 Comparison To Existing Screening Levels 1-2
1.2.1 OEHHA CHHSLs 1-3
1.2.2 US EPA Region 9 PRGs 1-5
1.2.3 City of Oakland Screening Levels 1-6
1.2.4 Hazardous Waste Regulations 1-7
1.2.5 OSHA Standards Permissible Exposure Levels 1-8
1.3 Chemicals Not Listed In Lookup Tables 1-10
1.4 Limitations 1-10

2 TIER 1 LOOKUP TABLES **2-1**

2.1 Use of Lookup Tables 2-3
2.2 Evaluation of Petroleum Contamination 2-6
2.3 Groundwater Beneficial Use 2-7
2.4 Shallow Versus Deep Soils 2-9
2.5 Land Use 2-11
2.6 Threat to Surface Water Habitats 2-12
2.7 Screening For Vapor Intrusion Concerns 2-14
2.7.1 Stepwise Approach to Vapor Intrusion Evaluation 2-15
2.7.2 Collection and Evaluation of Groundwater Data 2-17
2.7.3 Collection and Evaluation of Soil Gas Data 2-17
2.7.4 Soil Gas and Low-Permeable Soils 2-19
2.7.5 Collection and Evaluation of Indoor Air Data 2-20
2.8 Substitution of Laboratory Reporting Limits and Ambient Background Concentrations for ESLs 2-22
2.9 Implied Land-Use Restrictions Under Tier 1 2-22
2.10 Cumulative Risks at Sites With Multiple Chemicals of Concern 2-24
2.11 Framework for a Tier 1 Environmental Risk Assessment 2-24

3 TIER 2 AND 3 ENVIRONMENTAL RISK ASSESSMENTS **3-1**

3.1 Tier 2 Environmental Risk Assessments 3-3
3.2 Tier 3 Environmental Risk Assessments 3-7
3.2.1 Laboratory-Based Soil Leaching Tests 3-7

3.2.2 Tier 3 Environmental Risk Assessments for Parklands 3-10
3.2.3 Tier 3 Reference Documents 3-11

4 DEVELOPMENT OF TIER 1 LOOKUP TABLES 4-1

4.1 Example Selection of Tier 1 ESLs for Tetrachloroethene (PCE) 4-2
4.2 Cumulative Risk 4-4

5 GROUNDWATER AND SURFACE WATER SCREENING LEVELS 5-1

5.1 Screening Levels for Drinking Water 5-2
5.2 Screening Levels for Aquatic Habitat Protection 5-4
5.3 Groundwater Screening Levels for Aquatic Habitat Impacts 5-6
5.4 Groundwater Screening Levels for Potential Vapor Intrusion Concerns 5-7
5.4.1 Background and Use of US EPA Vapor Intrusion Model 5-10
5.5 Surface Water and Groundwater Ceiling Levels For Gross Contamination Concerns 5-11
5.6 Other Groundwater Screening Levels 5-12

6 SOIL SCREENING LEVELS 6-1

6.1 Soil Screening Levels for Direct-Exposure Concerns 6-2
6.1.1 Residential Receptors 6-2
6.2 Non-residential land uses 6-6
6.2.1 Commercial/Industrial Worker 6-6
6.2.2 Construction Worker 6-8
6.3 Lead 6-10
6.4 Background Metal Concentrations 6-12
6.5 Soil Screening Levels for Potential Vapor Intrusion Concerns 6-12
6.6 Soil Screening Levels for Groundwater Protection 6-13
6.7 Soil Screening Levels for Terrestrial Habitats 6-17
6.8 Ceiling Levels for Gross Contamination Concerns 6-18

7 INDOOR AIR AND SOIL GAS SCREENING LEVELS 7-1

7.1 Indoor Air Screening Levels 7-1
7.2 Soil Gas Screening Levels 7-2

8 SOIL AND GROUNDWATER SCREENING LEVELS FOR TPH 8-1

8.1 TPH Screening Levels for Groundwater 8-3
8.2 TPH Screening Levels for Soil 8-4
8.2.1 TPH (gasolines, middle distillates) 8-4

Executive Summary

This document presents Environmental Screening Levels (ESLs) for chemicals commonly found in soil and groundwater at sites where releases of hazardous chemicals have occurred. The terminology "environmental" screening levels is intended to better convey the broad scope of the document and clarify that some screening levels are not risk-based in a strict definition of this term.

The ESLs are considered to be conservative. Under most circumstances, and within the limitations described, the presence of a chemical in soil, soil gas or groundwater at concentrations below the corresponding ESL can be assumed to not pose a significant, long-term (chronic) threat to human health and the environment. Additional evaluation will generally be necessary at sites where a chemical is present at concentrations above the corresponding ESL. Active remediation may or may not be required depending on site-specific conditions and considerations. This document may especially be beneficial for use at sites with limited contamination, where the preparation of a more formal environmental assessment may not be warranted or feasible due to time and cost constraints.

The ESLs were developed to address environmental protection goals presented in the *Water Quality Control Plan for the San Francisco Bay Basin* (Basin Plan; San Francisco Bay Area Regional Water Quality Control Board; RWQCBSF 2006). These goals include:

Surface Water and Groundwater:

- Protection of drinking water resources;
- Protection of aquatic habitats;
- Protection against vapor intrusion into buildings;
- Protection against adverse nuisance conditions.

Soil:

- Protection of human health (direct-exposure);
- Protection against vapor intrusion into buildings;

- Protection against leaching and subsequent impacts to groundwater;
- Protection of terrestrial biota;
- Protection against adverse nuisance conditions.

The ESLs are presented in a series of tables. Each table reflects a specific combination of soil, groundwater and land-use characteristics that strongly influence the magnitude of environmental concerns at a given site. This allows the user to select ESLs that are most applicable to a given site.

The ESL document presents a tiered approach to environmental risk assessments. Under Tier 1, sample data are directly compared to ESLs selected for the site and decisions are made regarding the need for additional site investigation, remedial action or a more detailed risk assessment. In a Tier 2 risk assessment, a selected component(s) of the Tier 1 ESL is modified with respect to site-specific considerations. An example may be the adjustment of a screening level for direct exposure with respect to an approved, alternative target risk level. Site data are then compared to the revised screening level as well as the remaining, unmodified components of the Tier 1 ESL. This provides an intermediate but still relatively rapid and cost-effective option for preparing more site-specific risk assessments. Risk assessment models and assumptions that depart significantly depart from those used to develop the Tier 1 ESLs are described in a more traditional, Tier 3 risk assessment. The Tier 1 methodology can still provide a common platform to initiate a Tier 3 risk assessment and help ensure that all potentially significant environmental concerns are considered.

The Tier 1 ESLs presented in the lookup tables are NOT regulatory cleanup standards. Use of the ESLs and this document in general is intended to be entirely optional on the part of the regulated facility and subject to the approval of the case manager in the overseeing regulatory agency. The presence of a chemical at concentrations in excess of an ESL does not necessarily indicate that adverse impacts to human health or the environment are occurring; this simply indicates that a potential for adverse risk may exist and that additional evaluation is warranted. Use of

the ESLs as cleanup levels should be evaluated in view of the overall site investigation results and the cost/benefit of performing a more site-specific risk assessment.

Reliance on only the Tier 1 ESLs to identify potential environmental concerns may not be appropriate for some sites. Examples include sites that require a detailed discussion of potential risks to human health, sites where physical conditions substantially differ from those assumed in development of the ESLs (e.g., mine sites, landfills, etc., with high or low pH) and sites where impacts pose heightened threats to sensitive ecological habitats. The latter could include sites that are adjacent to wetlands, streams, rivers, lakes, ponds, marine shorelines, or sites that otherwise contain or border on areas where protected or endangered species may be present. Potential impacts to sediment are also not addressed. The need for a detailed ecological risk assessment should be evaluated on a site-by-site basis for areas where significant concerns may exist. Notification to the Natural Resource Trustee Agencies (including the state Department of Toxics Substances Control and Department of Fish and Game and the federal Fish and Wildlife Service, Department of the Interior and National Oceanic and Atmospheric Administration) may also be required, particularly if the release of a hazardous substance may impact surface waters.

The ESLs should not be used to determine when impacts at a site should be reported to a regulatory agency. All releases of hazardous substances to the environment should be reported to the appropriate regulatory agency in accordance with governing regulations. The lookup tables will be updated on a regular basis, as needed, in order to reflect changes in the referenced sources as well as lessons gained from site investigations and field observations.

Table A. Environmental Screening Levels (ESLs)
Shallow Soils (≤3m bgs)
Groundwater is Current or Potential Source of Drinking Water

Notes:

1. Shallow soils defined as soils less than or equal to 3 meters (approximately 10 feet) below ground surface.
2. Category "Residential Land Use" generally considered adequate for other sensitive uses.
3. Assumes potential discharge of groundwater into a freshwater, marine or estuary surface water system.

Soil ESLs intended to address direct-exposure, groundwater protection, ecologic (urban areas) and nuisance concerns under noted land-use scenarios. **Soil gas data should be collected for additional evaluation of potential indoor-air impacts at sites with areas of VOC-contaminated soil.**

Groundwater ESLs intended to be address drinking water, surface water, indoor-air and nuisance concerns. **Use in conjunction with soil gas screening levels to more closely evaluate potential impacts to indoor-air if groundwater screening levels for this concern approached or exceeded.**

Aquatic habitat goals for bioaccumulation concerns not considered in selection of groundwater goals.

TPH -Total Petroleum Hydrocarbons. TPH ESLs must be used in conjunction with ESLs for related chemicals (e.g., BTEX, PAHs, oxidizers, etc.).

Calculation for Estimating Dissolved-Phase Mass in Groundwater

$Mass_{w} = (Vol)*(C_{avg})*(Por_{s})*UMC$ (kg)

Vol = Volume of Contaminated Groundwater (ft^3)
C_{avg} = Contaminant Concentration in Groundwater (mg/L)
Por_{s} = Soil Porosity (%)
UMC = Unit Mass Conversion = $(1000L/m^3)*(0.02832\ m^3/ft^3)*(1g/1000mg)*(1kg/1000g)$

Vol = ((Plume Length/2)*(Plume Width/2)*3.1416)*Plume Thickness
Vol = ((100.5)*(58.5)*3.1416)*3.0
Vol = 55,410.76 ft^3

C_{avg} = ((49+26)/2)/1000
C_{avg} = 0.0375 mg/L

Por_{s} = 30% (assumed) = 0.30

$Mass_{w}$ = (55410.76)*(0.0375)*(0.30)*UMC
$Mass_{w}$ = 0.018 kg
$Mass_{w}$ = (0.018*2.205) = 0.04 lbs.

VOLUNTARY ASSISTANCE PROGRAM # DEH2014-LSAM-000231
ESCONDIDO WESTERN PUBLIC WORKS YARD
901 W. WASHINGTON ST., ESCONDIDO, CA

The Department of Environmental Health (DEH), Site Assessment and Mitigation Program (SAM), reviewed the environmental investigation report related to the above-referenced property, prepared by BBC Environmental, Inc., on March 15, 2013. The report summarizes the site investigation activities performed at the above-referenced location. Provided that the information presented to DEH was complete, accurate, and representative of existing site conditions, **this agency concurs that the cleanup goals established for the subject site have been met.**

Please be advised that this letter does not relieve the responsible party of any liability under the California Health and Safety Code or the Porter Cologne Water Quality Control Act. If previously unidentified contamination is discovered which may affect public health, safety and/or water quality, additional site assessment and cleanup may be necessary.

The DEH understands that the present land use for the Site is a commercial property. Changes to this land use may require reassessment of the property to determine if the revised land use could result in a risk to public health.

Thank you for selecting the DEH as your lead agency to assist you with the progress of your environmental project. Please contact Laurie Apecechea of SAM, at (858) 505-6993, if you require additional assistance.

Sincerely,

COLLEEN HINES, Program Manager
Supervising Environmental Health Specialist
Site Assessment and Mitigation Program

Enclosure

cc: Ms. Julie Procopio, Asst. Director, City of Escondido
Walter Craig, BBC Environmental (via electronic mail)

Case Closure Summary
Non-LOP or Voluntary Assistance Program

I. AGENCY INFORMATION

DATE: June 6, 2016

Agency Name: County of San Diego, Environmental Health, SAM	Address: P.O. Box 129261
City/State/ZIP: San Diego, CA 92112-9261	Phone: (858) 505-6700
DEH Staff Person: Laurie Apecechea	Title: Environmental Health Specialist III

II. CASE INFORMATION

Case No. DEH2014-LSAM-000231	RWQCB Case No. N/A
Site Name: Escondido Western Public Works Yard	SITE ADDRESS: 901 West Washington St., Escondido 92025

Property Owner	Address	Phone Number
City of Escondido c/o Charles Grimm, Asst. City Manager	201 N. Broadway, Escondido, CA 92025	(760) 839-4621

Requesting Party	Address	Phone Number
(Same as above)		

Agency notification of DEH Oversight: DTSC: 2/12/2014 RWQCB: 2/12/2014

III. SITE CHARACTERIZATION AND/OR INFORMATION

Purpose of Investigation: Assess potential impacts of facility operations to soil and groundwater.		Substances Investigated: Petroleum Hydrocarbons, Volatile Organic Compounds, Metals, and Polychlorinated Biphenyls	
Site Characterization complete? Yes			
Monitoring Wells Installed? No	Total Number: N/A	Proper Screened Interval? N/A	Number of decommissioned wells: N/A
Depth to groundwater beneath site? 13 to 22 Feet (Estimated)		Groundwater Flow Direction: Southeast (Estimated)	
Most Sensitive Current Use: Groundwater – MUN, AGR, IND, SUP Surface Water – MUN, AGR, REC1, REC2,			
Are Drinking Water Wells Affected? No		RWQCB Basin Number: 904.62 – Escondido Hydrologic Sub-area	
Is Surface Water Affected? No		Nearest Surface Water Name: Reidy Creek, (50 feet to SE)	
Off-Site Beneficial Use Impacts (addresses/locations): None			

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal)	Date
None

Case Closure Summary
Non-LOP or Voluntary Assistance Program

III. SITE CHARACTERIZATION AND/OR INFORMATION (Continued) DEH2014-LSAM-000231

COMMENTS: Voluntary Assistance Program case, DEH2014-LSAM-000231, was opened to review a Phase 2 site assessment report for future site development at the subject site. The subject property is located mid-block on the south side of West Washington Avenue between Metcalf Street and North Spruce Street in Escondido. The site is currently operating as a public works storage yard for materials, aggregate and equipment. The site also acts as a heavy equipment training area for City employees. Historical records and aerial photographs reveal the prior presence of a railroad wye rail. The site is bounded on the east by Palomar Transit Mix and to the southeast by the Reidy Creek storm drain channel. The subject site had a previous release under the oversight of the Department of Environmental Health (DEH), listed as case H20272-003. This case was opened following the discovery of shallow soil impacts of total petroleum hydrocarbons (TPH) within an unlined drainage ditch. The origin of the contamination found at the site was noted to be from the Palomar Ready Mix facility located east of the site. The case was closed by DEH on August 26, 1991, following excavation of approximately 22 cubic yards of impacted soil.

The recent site assessment report (SAR) dated March 15, 2013, submitted to DEH for case DEH2014-LSAM-000231 discusses the prior DEH case regarding the soil excavation in 1991, and lists the amount removed as 70 cubic yards, which is a different volume that was listed in the DEH closure. The most recent fieldwork presented in the 2013 SAR was conducted in November 2010, and again in April 2012. The investigation conducted in November 2010, included the installation of twelve direct push soil borings (SB-1 through SB-12) in various areas on site, including the former drainage ditch and current storm drain culverts. Soil and groundwater samples were obtained from each boring. The soil laboratory analytical results indicated total petroleum hydrocarbons (TPH) in the diesel and motor oil range in the samples from the soil borings advanced along the former drainage ditch. Groundwater sample results were mostly nondetect, except for low concentrations of Methly-tert-butylether (MTBE) and Tetrachloroethene (PCE). Additionally, three grab groundwater samples were obtained earlier in October 2010 during the advancement of geotechnical borings and one of those samples contained MTBE.

The second investigation included the installation of four additional direct push borings (SB-13 through SB-16) to define the dissolved MTBE contamination found during the initial investigation. The 2012 groundwater analytical results were all nondetect for MTBE, but all samples contained similar concentrations of PCE. Since the MTBE in groundwater was delineated by the second phase of work, the soil samples obtained were not analyzed.

The conclusions in the SAR are the location of the former excavation for DEH case H20272-003, most likely extended into the locations of soil borings SB-2 and SB-3 installed in November 2010. SB-3-15 was most likely taken below the 1991 remedial excavation. The vertical delineation of the shallow soil impacts observed at SB-2-5 suggests it is limited. The absence of TPH in groundwater beneath the two sample locations supports the conclusion that impacts are minor. The low concentrations of MTBE reported appear to be limited to the northwestern portion of the site and are fully delineated. No onsite soil MTBE source has been detected and the estimated MTBE mass was calculated to be approximately 0.018 kg. The low levels of PCE in groundwater at the site are similar to other DEH sites located in the area. The absence of PCE in the soil suggests that the dissolved PCE concentrations are regional and possibly for an off-site source. Naturally occurring metals in both soil and groundwater are present at the site, but also seem regional in nature. The consultant has concluded that no further assessment is necessary, and DEH concurs with the recommendation.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? No, the dissolved MTBE and PCE concentrations are slightly above the MCL, but appear to be associated with regional off-site impacts reported in the general area.
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes
Does corrective action protect public health for current land use? Yes Case review based on current use as: Commercial – possible redevelopment
Are there other issues DEH needs to follow up on: No
Site Management Requirements: Any contaminated soil excavated as part of subsurface construction work must be managed in accordance with the legal requirements at that time.
Should corrective action be reviewed if land use changes? Yes
List Enforcement Actions Taken: None
List Enforcement Actions Rescinded: N/A
Is this account up to date and current? Yes

V. LOCAL AGENCY REPRESENTATIVE DATA

Name: Kevin M. Heaton, PG4163, CHg 163	Title: Senior Hydrogeologist
Signature:	Date: 6/30/2016

VI. RWQCB NOTIFICATION

Date Submitted to RWQCB: N/A - VAP	RWQCB Response: N/A - VAP	
RWQCB Staff Name: N/A	Title: N/A	Date: N/A

VII. ADDITIONAL COMMENTS, DATA, ETC.

NONE

This document and the related CASE CLOSURE LETTER, shall be retained by the lead agency as part of the official site file.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/13/2018 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity

generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/29/2018 has revealed that there are 12 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 4 SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 52 LUST sites within

approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Facility Status: Closed Case

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 19 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 12 SWEEPS UST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SAN DIEGO CONS GAS A	S. SPRUCE AND W 3RD	SE 1/2 - 1 (0.655 mi.)	121	826

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk

Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Potential Contaminants of Concern:	Not reported
Site History:	COMMENTS: Voluntary Assistance Program case, DEH2014-LSAM-000231, was opened to review a Phase 2 site assessment report for future site development at the subject site. The subject property is located mid-block on the south side of West Washington Avenue between Metcalf Street and North Spruce Street in Escondido. The site is currently operating as a public works storage yard for materials, aggregate and equipment. The site also acts as a heavy equipment training area for City employees. Historical records and aerial photographs reveal the prior presence of a railroad wye rail. The site is bounded on the east by Palomar Transit Mix and to the southeast by the Reidy Creek storm drain channel. The subject site had a previous release under the oversight of the Department of Environmental Health (DEH), listed as case H20272-003. This case was opened following the discovery of shallow soil impacts of total petroleum hydrocarbons (TPH) within an unlined drainage ditch. The origin of the contamination found at the site was noted to be from the Palomar Ready Mix facility located east of the site. The case was closed by DEH on August 26, 1991, following excavation of approximately 22 cubic yards of impacted soil. The recent site assessment report (SAR) dated March 15, 2013, submitted to DEH for case DEH2014-LSAM-000231 discusses the prior DEH case regarding the soil excavation in 1991, and lists the amount removed as 70 cubic yards, which is a different volume that was listed in the DEH closure. The most recent fieldwork presented in the 2013 SAR was conducted in November 2010, and again in April 2012. The investigation conducted in November 2010, included the installation of twelve direct push soil borings (SB-1 through SB-12) in various areas on site, including the former drainage ditch and current storm drain culverts. Soil and groundwater samples were obtained from each boring. The soil laboratory analytical results indicated total petroleum hydrocarbons (TPH) in the diesel and motor oil range in the samples from the soil borings advanced along the former drainage ditch. Groundwater sample results were mostly nondetect, except for low concentrations of Methly-tert-butylether (MTBE) and Tetrachloroethene (PCE). Additionally, three grab groundwater samples were obtained earlier in October 2010 during the advancement of geotechnical borings and one of those samples contained MTBE. The second investigation included the installation of four additional

ESCONDIDO PUBLIC WORKS YARD - WESTERN YARD (Continued) **S116290495**

direct push borings (SB-13 through SB-16) to define the dissolved MTBE contamination found during the initial investigation. The 2012 groundwater analytical results were all nondetect for MTBE, but all samples contained similar concentrations of PCE. Since the MTBE in groundwater was delineated by the second phase of work, the soil samples obtained were not analyzed. The conclusions in the SAR are the location of the former excavation for DEH case H20272-003, most likely extended into the locations of soil borings SB-2 and SB-3 installed in November 2010. SB-3-15 was most likely taken below the 1991 remedial excavation. The vertical delineation of the shallow soil impacts observed at SB-2-5 suggests it is limited. The absence of TPH in groundwater beneath the two sample locations supports the conclusion that impacts are minor. The low concentrations of MTBE reported appear to be limited to the northwestern portion of the site and are fully delineated. No onsite soil MTBE source has been detected and the estimated MTBE mass was calculated to be approximately 0.018 kg. The low levels of PCE in groundwater at the site are similar to other DEH sites located in the area. The absence of PCE in the soil suggests that the dissolved PCE concentrations are regional and possibly for an off-site source. Naturally occurring metals in both soil and groundwater are present at the site, but also seem regional in nature. The consultant has concluded that no further assessment is necessary, and DEH concurs with the recommendation.

FINDS:

Registry ID: 110002782613

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110013335943

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

HAZARDOUS AIR POLLUTANT MAJOR

STATE MASTER

COMET NEON (Continued) **1000223538**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Permit Status: Permit Renewed
Active Permit: Y
Facility Id Number: 37-000-106065
Program Element: Hazardous Materials Release Response Plans
Inspection Type: Routine
Inspection Number: 4087497
Return To Compliance Date: 2014-06-09T00:00:00.000
Nov: No
Violation Classification: Minor
Underground Storage Tank Id: Not reported
Container/Tank Id: Not reported
Last Update: 2018-08-01T00:46:52.000
Inspection Date: 2014-04-29T09:05:00.000
Violation Code: 1010006 Failure to update hazardous material inventory within 30 days when one of the following occurs: A 100 percent or more increase in the quantity of a previously disclosed material; Any handling of a previously undisclosed hazardous materials; A change of business address, business ownership, or business name; 19 CCR 4 2729.4(d); HSC 6.95 25505(b), 25510.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	The City of Escondido Maintenance (Eastern Public Works) Yard site is currently used to maintain the City's fleet of vehicles. The facility is also used to store equipment used in City operations. A portion of the yard overlies the former City Sewage Treatment Plant, which was decommissioned in the 1950s. On August 26, 1999, a total of five underground storage tanks (USTs) were removed. Three tanks were removed from the property that had contained gasoline. A waste oil tank was also removed. At the time of the tank removal soil samples were collected from the tank excavation and dispenser area. The laboratory results indicated total petroleum hydrocarbon as gasoline (TPHg) up to 15, 000 mg/kg and total petroleum hydrocarbons as diesel up to 7,900 mg/kg were detected. On September 2, 1999, the case was opened. The City began its site investigation in April 2001 with the drilling of four exploratory borings and the installation of five groundwater monitoring wells. This investigation did not result in definition of the limits of the soil contamination, but did confirm that groundwater was impacted. Groundwater samples collected from the borings using a hydropunch indicated TPHg concentrations of up to 520,000 ug/l, TPHd concentrations of less than 900 ug/l, benzene concentrations up to 11,000 ug/l, toluene concentrations up to 66,000 ug/l, ethylbenzene concentrations up to 10,000 ug/l, xylene concentrations up to 65,000 ug/l, and methyl- tert-butyl ether (MTBE) concentrations up to 37,000 ug/l. Free product has been observed in the well located southwest of the tank excavation (MW-5) up to 0.65 feet. During the last two sampling events free product was not observed. As of November 2007 a total of the 14 groundwater monitoring wells had been installed at the site. On November 15, 2007 a workplan to install one additional monitoring well was approved to complete the extent of groundwater delineation. The work plan was not implemented, but was re-authorized in 2011 and executed. Groundwater monitoring and sampling at the site resumed in July 2011. The maximum benzene concentration detected was 340 ug/l, while the maximum detected concentration of MTBE was 5,500 ug/l. TCE and PCE are also chemicals of concern for the site; due to elevated aromatic hydrocarbon concentrations, the detection levels for these chlorinated hydrocarbons are also elevated, potentially masking the magnitude of dissolved concentrations. A work plan for completing

CITY OF ESCONDIDO DEPARTMENT OF PUBLIC WORKS (Continued) **U001571485**

delineation of the dissolved plume was submitted to GeoTracker and approved by DEH in November 2013.

FINDS:

Registry ID: 110002843166

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
